STATE OF FLORIDA DEPARTMENT OF EDUCATION
CONTRACT
(NON-STATE TERM)
NO. 14-652

Department of Education **Division:** Accountability, Research and Measurement **Bureau:** Office of Assessment **Section:** K-12 Assessments	**Name of Contractor** American Institutes for Research (AIR) **Address of principle place of business:** 1000 Thomas Jefferson St., NW Washington, DC 20007-3835 _____ _____

THIS CONTRACT ("Contract") is entered into as a contractual undertaking by and between the Florida Department of Education ("Department") and the above-named Contractor ("Contractor") as of the Effective Date concerning the project identified below ("Project").

I. Name of Project:
Florida Standards Assessments

II. Brief Summary of Nature and Purpose of Project:
The purpose of this contract is to provide services related to the implementation of computer-based and paper-based statewide summative assessments aligned to the Florida Standards for administrations beginning in spring 2015 and continuing through 2016-17 for the base contract with three one-year optional renewals for the administrations in 2017-18, 2018-19, and 2019-20. Henceforth, in this document, this test shall be called the FSA (Florida Standards Assessment).

III. Contract Documents:

The documents establishing and constituting the contractual relationship between the Department and the Contractor (referred to collectively as the "Contract") supersede all prior agreements and understandings, written or oral, regarding this Project and consist of the following:

- This Contract, including all of the following attachments, which are hereby incorporated by reference and made a part hereof, and which are identified as follows (reference additional attachments as appropriate):

  1. Attachment A: Detailed Description of Performance Duties;
  2. Attachment B: Payment Schedule;
  3. Attachment C: Standard Terms and Conditions;
  4. If determined by the Department to be applicable, Attachment D: Single Audit Act Requirements. The Department determines that Attachment D is not applicable and
  5. Attachment E: Minority Sub Contractors Utilization Summary. The Department determines that Attachment E is applicable.
  6. Attachment F: ITN 2014-47 originally released on November 8, 2013

7. Attachment G: Addendums 1, 2 and 3 to ITN 2014-47, originally released on October 31, 2013, November 12, 2013, and November 18, 2013 respectively.
8. Attachment H: Contractor's Technical Response dated December 16, 2013
9. Attachment I: Contractor's Pricing Response dated December 16, 2013
10. Attachment J: Contractor's Best and Final Offer dated February 13, 2014
11. Attachment K: Contractor's Best and Final Offer dated March 14, 2014.

The provisions of this Contract shall have control over all Attachments, and the order of priority for all Attachments shall be as follows in the case of any conflicts between the Attachments; A, B, C, D, E, G, F, K, J, H, I

IV. Project Management:

The Department and the Contractor designate their respective representatives, identified below ("Contract Manager"), for coordination, communication, and management of the Project.

For the Department:

Vince Verges
(Name)

Assistant Deputy Commissioner
(Title)

Florida Department Of Education
(Mailing address)

Division of Accountability, Research and Measurement, Office of Assessment
Turlington Bldg. Suite 414
325 West Gaines Street
Tallahassee, Fl. 32399

Phone: 850-245-78-62
Fax: 850-245-0771
e-mail: Vince.Verges@FLDOE.org

For the Contractor:

Vickie L. Brooks
(Name)

Contract Officer
(Title)

American Institutes for Research (AIR)
(Mailing address)

1000 Thomas Jefferson Street, NW
Washington, DC 20007-3835

Phone: 202-403-5886
Cell: 202-603-2342
Fax: 202-403-5414
e-mail: vbrooks@air.org

Invoicing and Administrative Issues
Delanah Gebhart
Procurement, Contract, Grants and Fiscal Manager
Phone: 850-245-0801
Fax: 850-245-0771
e-mail: Delanah.Gebhart@FLDOE.org

V. Effective Date:

This Contract shall be effective on **May 30, 2014,** or on the date upon which it is signed by both Department and Contractor, whichever is later. ("Effective Date").

STATE OF FLORIDA DEPARTMENT OF EDUCATION
CONTRACT
(NON-STATE TERM)

Year 1: May 30, 2014 – May 29, 2015
Year 2: May 30, 2015 – May 29, 2016
Year 3: May 30, 2016 – May 29, 2017

VI. Expiration Date:

This Contract shall expire **on May 29, 2017**, unless cancelled earlier in accordance with its terms.

VII. Renewal:

Subject to the limitations set forth in Sections 287.057(13), and 287.058(1)(g), Florida Statutes, and Attachment C, Section I.F, this Contract is renewable at the option of the Department for a renewal period or periods with commencement and expiration dates as follows:

Three additional 12 month terms, beginning on May 30, and ending on May 29, of each renewal year of the Contract.

Renewal Year 1: May 30, 2017 – May 29, 2018
Renewal Year 2: May 30, 2018 – May 29, 2019
Renewal Year 3: May 30, 2019 – May 29, 2020

The Department shall provide advance written notice of its decision to exercise its option to renew **six (6) months prior to the expiration of the Contract.**

VIII. Travel:

Contractor will ☒ will not ☐ be reimbursed for travel pursuant to Section 112.061, Florida Statutes.

IX. Notice:

Notice given pursuant to the terms and conditions of this Contract shall be sufficient if given to the receiving party's Contract Manager either 1) in writing addressed to that Contract Manager by certified mail, return receipt requested, or 2) by hand delivery.

X. Approval and Execution:

The Department and the Contractor have caused this Contract to be executed by their undersigned officials, duly authorized.

Contract No.: 14-652
Attachment A
Detailed Description of Performance Duties

STATE OF FLORIDA, DEPARTMENT OF EDUCATION
PROCUREMENT CONTRACT – ATTACHMENT A
DETAILED DESCRIPTION OF PERFORMANCE DUTIES

The detailed description of the Contractor's performance duties and related provisions for the Contract awarded to American Institutes for Research, **Contract No. 14-652**, are as follows:

I. Project Overview:

A. Program Background and Purpose of Project.

The purpose of this Contract is to provide services related to the implementation of computer-based and paper-based statewide summative assessments aligned to the new Florida Standards for administrations beginning in spring 2015 and continuing through 2016-17 for the base Contract with three one-year optional renewals for the administrations in 2017-18, 2018-19, and 2019-20. Henceforth, in this document, these tests shall be called the Florida Standards Assessments (FSA).

The Contractor will provide the Department with a criterion-referenced achievement test, aligned to and measuring mastery of the new Florida Standards in English Language Arts/Literacy (ELA/L) and Mathematics proficiency for administration to Florida public school students. For purposes of this Contract, the Florida Standards are to be considered those adopted by the Florida State Board of Education in February 14, 2014. .

The primary purpose of the assessment is to provide student academic achievement and learning gains data to students, parents, teachers, school administrators, and school district staff. This data is to be used by districts to improve instruction; by students, parents, and teachers to guide learning objectives; by education researchers to assess data; and by the public to assess the cost benefit of the expenditure of taxpayer dollars. The assessment will be designed to:

1. Assess the achievement level and annual learning gains of each student in ELA/L and Mathematics.
2. Provide data for making decisions regarding school accountability, recognition, and improvement of operations and management, including schools operating for the purpose of providing educational services to youth in Department of Juvenile Justice programs.
3. Identify the educational strengths and needs of students and the readiness of students to be promoted to the next grade level, to graduate from high school, and to succeed in college and in careers.
4. Assess how well educational goals and curricular standards are met at the school, district, and state level, and at the national level, to the extent possible.

B. Scope of Work:

The Contractor agrees to provide services for the implementation of computer-based and paper-based statewide summative assessments aligned to the Florida Standards for administrations beginning in spring 2015 and continuing through 2016-17 for the base Contract with three one-year optional renewals for the administrations in 2017-18, 2018-19, and 2019-20. The Contractor will provide service tasks, activities and deliverables as specified in detail in the following Attachments to the Contract; Attachment **F (ITN 2014-47), Sections 7.0 – 7.7.10**, **Attachment G (ITN Addendums)**, **Attachment H (Contractor's Technical Response), Attachment I (Contractor's Pricing Response), Attachment J (Contractor's Best and Final Offer dated February 2014), Attachment K (Contractor's Best and Final Offer dated March 14, 2014)** and as detailed below. All references to **Attachment F** below shall include any clarifications provided in **Attachment G**.

- The Contract includes development, psychometric services, administration, scoring, and reporting of Florida Standards Assessments in English Language Arts/Literacy and Mathematics for the test administration cycles for 2014-2015 through 2016-17, with possible renewal of services in three one-year renewal periods, 2017-18 through 2019-2020.
- The Department and Contractor understand the end of the base contract term ends on May 29, 2017, which falls during multiple test cycles and are part of this Contract.
- The Department and Contractor agree that no activities associated with Spring 2017 testing are included in this base scope of work unless the payment for the Deliverable is included on Exhibit 1. Contractor is not responsible for beginning activities associated with Spring 2017 testing that are included in the Renewal Years until those Renewal Years are exercised. Similarly, the current contract end date of May 29, 2020 means the Contract does not include most activities required for Spring 2020 testing
- The Contractor will work closely with the Department and with groups of Florida educators to complete all deliverables. All procedures, processes, and products used by the Contractor to complete contract work must be approved by the Department. Throughout the contract period, the Contractor will confer with the Department on a continuing and consistent

basis and will be involved in frequent face-to-face and remote meetings with the Department, as necessary.

- The Contractor will provide services related to all of the Assessment Components as described below.
  - Computer-based and paper-based assessments in English Language Arts/ Literacy in Grades 3-8
  - Computer-based and paper-based assessments in Mathematics in Grades 3-8
  - Computer-based and paper-based assessments in English Language Arts/Literacy in Grades 9-11
  - Computer-based and paper-based End-of-Course (EOC) assessments in Algebra 1, Geometry, and Algebra 2

Note: Quantities of materials upon the expected number of students, shipping destinations, and schools provided in **Appendix C of Attachment F**, with the required 10% overage. Handscoring is based on these actual quantities before materials overage.

1. Project Schedule

   As specified in **Attachment F, Section 7.7.6**, the Contractor will create a Project Schedule which will encompass the entire life of the Contract. The Project Schedule will be updated weekly during the life of the Contract and shall indicate all task completion dates, and be revised as needed with Department approval. The Schedule will be developed for each year of the program and will include both high-level management summary information as well as specific dates associated with critical processes, milestones, and deliverables for individual projects listed in the program management plan.

   A draft Project Schedule, based on a sample provided by the Department, will be prepared by the Contractor for submission to the Department **one week prior to the initial planning meeting**, which will be held **no later than one month after the execution of the Contract**. The schedule will be submitted in hard copy and electronic format using Department-approved software that permits sorting by start or end date and major task and subtask groupings.

   The Project Schedule will include the following;

   a. Major project activities with essential steps for the completion of project tasks,
   b. Initiation and completion dates,
   c. Task responsibility. Tasks and responsibilities will list staff assigned and identify primary and secondary contacts for each major project activity.
   d. The Project Schedule will take into consideration that the schedules for each project year overlap to accurately estimate required annual resources, and schedules for preceding and succeeding years need to be considered.

2. Test Administration Dates

   As specified in **Attachment F, 7.2.2,** the starting dates for spring 2015 assessment administrations are included in the table on the following page. Dates for the test administrations in 2015-16 and 2016-17 will be agreed upon by the Department and the Contractor and will be similar to the table on the following page for spring, and similar to the dates in **Appendix A of Attachment F** for retakes and for fall, winter, and summer EOC administrations.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Florida Standards Assessments (FSA)		
Language Arts and Mathematics		
Dates	**Assessment**	**Grade Level**
March 2–13, 2015	FSA English Language Arts – Writing Component	4–11
March 23–April 10, 2015	FSA English Language Arts/Mathematics	3–4
April 13–May 8, 2015	FSA English Language Arts	5–11
April 13–May 8, 2015	FSA Mathematics	5–8
FSA End-of-Course Assessments		
Dates	**Assessment**	
April 20–May 15, 2015	Algebra 1, Geometry, Algebra 2	

3. Test Design and Development

As specified in **Attachment F, 7.3.0**, the Contractor shall provide services for: test design, item development and review, item banking, and test production for the FSA. It is understood that by the time the Contract is executed, some test items may have already been developed for assessments that will be operational in 2014-2015. However, the Department expects to be closely involved in the development and review of new test items to be field tested and developed in subsequent years. The Contractor has proposed, and Florida has accepted, a plan that includes the following key features;

- Begin test design and blueprints for the FSA by reviewing the use of licensed items from Utah's Student Assessment of Growth and Excellence (SAGE)
- Use licensed items from SAGE to prepare the Spring 2015 operational assessments, subject to the terms of the license agreement between AIR and Utah. If the Department determines that any proposed SAGE multiple-choice items do not have exactly one correct response, or if any item does not clearly indicate what is expected of the student in order to serve as a valid measure of student mastery, the Department will reject such items and select others from the SAGE bank that meet the desired content and statistical criteria. In the event that, after conducting its review of proposed SAGE items, there are insufficient numbers of items available that meet the requirements, the Department will propose edits to selected item(s) in order to provide enough acceptable items to satisfy the test blueprint. Proposed edits must be approved by the Assistant Deputy Commissioner, Office of Assessment. The Contractor will then apply the edits in order for the item(s) to be included in the 2015 operational assessment. The Department will be allowed to make changes to the SAGE items under these circumstances, at no cost, for up to five items per grade and subject in Grades 3-11 ELA and Grades 3-8 Mathematics and up to 10 items for each end of course exam in Algebra 1, Geometry, or Algebra 2. The Department does not claim ownership of the edited items, and edited items shall remain subject to all test security requirements of unedited SAGE items. In the event that the Department exceeds this limit it will, at its discretion, either: (a) Pay the Contractor $1400 for each additional SAGE item it modifies, or (b) Allow the Contractor to reduce Florida-specific development by one. The Department will determine which item will be reduced by grade, subject, standard and level of cognitive skill. In the event the Department exceeds this limit, the Contractor shall inform the Department of the impact on the deliverable dates on Exhibit B and the Department and Contractor shall negotiate mutually acceptable changes to critical or extremely critical deliverable dates.
- Include 100% machine-scoring for all computer-based assessments except for the following items
    - Grade 3: No Writing
    - Grade 4: Long Write, 1 human score and 1 machine score
    - Grade 5: Short Write, 1 human score and 1 machine score
    - Grade 6: Short Write, 1 human score and 1 machine score
    - Grade 7: Long Write, 1 human score and 1 machine score

- Grade 8: Short Write, 1 human score and 1 machine score
- Grade 9: Short Write, 1 human score and 1 machine score
- Grade 10: Short Write, 2 human scores, including retakes
- Grade 11: Long Write, 1 human score and 1 machine score
- When responses receive one machine score and one human score: If the scores are adjacent, the human score will be assigned. If the scores are non-adjacent, there will be a resolution process, with human scorers providing the final score.

The remainder of the test design, administration and scoring assumptions can be identified by reading Attachments F, G, H, I, J and K together.

To the extent possible, the Department also expects to be involved in any test construction activities for 2015 assessments still to be completed after Contract execution. The Department's primary goal with respect to test design is ensuring that the assessment measures student mastery of the FSA, and accomplishes this in the most cost-effective way without significantly increasing student testing time beyond that of current Florida assessments.

- The Department has established a Test Development Center (TDC), staffed with editors and Florida educators, to provide quality assurance for all test content and related products, whether customized or derived from existing products. The Contractor will work closely with the Department and TDC staff to ensure that the test philosophy, design, item specifications, and product quality are aligned with Florida's expectations.
- The Department and TDC will also coordinate closely with the Contractor to conduct rangefinding meetings with educators in order to generate training materials for the scoring of performance tasks.
- The selected Contractor will be required to coordinate all meeting activities and materials; the Department and TDC will identify invitees and assist in facilitating all meetings for the required meetings that are referenced throughout the **Attachment F (ITN) and Section 7.7.7** summary of details about educator/citizen meetings.
- Test development procedures must include;
  - Review and revision of proposed test and item specifications,
  - Review of test blueprints,
  - Review and evaluation of items available for use on the test (item development plan),
  - Field testing for needed items to complete the desired test design,
- Final operational test creation.
  - All phases of test development shall use accepted validity, reliability and other testing principles including Universal Test Design,
  - A plan for complete data review of field-tested items must be delineated,
  - The Department must approve the items and the test forms before they become operational.

4. Test Content
   - The Contractor shall ensure that test items meet the requirements specified in **Attachment F, Section 7.3.1**. Additionally, the first tests to be administered by the Contractor under this Contract will be the spring 2015 ELA/L and Mathematics tests in Grades 3 – high school. Several sections of **Attachment F** and **G (ITN and Addendums)** have been modified from the original requirements through **Attachments H, I,** and **J (the Contractor's proposal and BAFOs)** and through negotiations. **Specifically:** One-item-per-page materials have been eliminated and replaced with Contractor's Print-on-Demand function.
   - Reading Passage Booklets have been eliminated and replaced with Contractor's Print-on-Demand function.
   - The physical printing, shipping, and processing of Large-Print materials have been eliminated. This requirement will be met using the Print-on-Demand function, with students or scribes entering student responses into the Test Delivery System. The Contractor will collect and securely process all Print-on-Demand materials and provide a missing materials list.
   - For computer-based assessments, the Contractor shall produce, deliver and score paper-pencil alternate tests for up to 2% of the student population in years 2014-15 and 2015-16. The Contractor shall produce, deliver and score paper-pencil tests for up to 1% of the student population in future years. All paper tests will be entirely machine-scorable selected response.
   - Print-on-Demand shall be available for 3% of the student population in years 2014-15 and 2015-16, and for 4% of the student population in future years. As an alternative solution to the Print on Demand option described above, secure printable PDF test forms can be made available at an additional cost of $98,0000 per year. The cost

covers data entry processes to capture student responses.

- These changes will also impact Sections 7.3.2 through 7.8 in the Attachment F.

5. Test Configuration

As specified in **Attachment F, Section 7.3.2 and 7.3.2.1**; **Attachment F, Appendix E,** the Contractor shall configure tests which meet Department requirements. The Department may choose to modify the design of any state-specific test documents/files prior to any test administration, and reserves the right to change this configuration beyond the specifications but within the scope of the Contract, if necessary, through amendment to the Contract. These sections of **Attachment F** describe a variety of potentially required documents. The Department understands the Contractor's Proposal is based on alternatives for certain documents where the online system provides well-proven, secure alternatives.

6. Develop Items

As specified in **Attachment F, Section 7.3.3** it is the responsibility of the Contractor to ensure that the quantity of items developed and submitted for review annually is sufficient to create operational test forms for each administration. The Contractor shall develop or provide:

- For embedding in Spring 2015 assessments: per grade/subjects, approximately 150 AIRCore items available for review and selection and approximately 75 items newly developed specifically for Florida,
- For embedding in Spring 2016 and 2017 assessments: per grade/subjects, approximately 50 AIRCore items available for review and selection and approximately 25 items newly developed specifically for Florida If Renewals are exercised, for Spring 2018 assessments: per grade/subjects, approximately 50 AIRCore items available for review and selection and approximately 25 items newly developed specifically for Florida,
- No new items will be developed for embedding after Spring 2018.

This **Attachment A** assumes this revised item development plan changes requirements in **Sections 7.3.4 t**hrough **7.6** in the **Attachment F.**

7. Review Meetings

As specified in **Attachment F, Section 7.3.4 -7.3.4.4, concerning** test items developed for use on assessments following the spring 2015 administration, the Contractor will be responsible for organizing and convening meetings for the purpose of reviewing assessment items and ELA/L passages for content and bias and community sensitivity issues by Department-appointed review committees composed of Florida educators and other citizens. A detailed list of meetings to be conducted under this Contract and the funding mechanism for these meetings are provided in **Attachment F, Sections 7.7.7 and 7.7.9.** The Department and Contractor will update this list to reflect the following;

- There is no planned item development or embedded field testing in Renewal Years 2 and 3
- Rangefinding only applies to the Standalone Writing Field Test
- The Contractor will conduct rubric validation meetings for embedded field test machine-scored constructed response items.

For each meeting, the Contractor will be required to maintain original forms of all committee member test security and non-disclosure agreements. These will be made available to the Department on an as-needed basis.

The meetings will be held in a Florida location that is easily accessible (hub cities) to the majority of participants and capable of handling the logistical requirements of a large-scale, multi-committee meeting.

The Contractor will prepare assessment items and all other materials required to conduct the meetings as listed below. Separate content review meetings will be conducted for each subject/grade combination.

a. Bias and Sensitivity Committee Reviews, ss.7.3.4.1,
b. Item Content Review Committees, ss. 7.3.4.2,
c. Data Review Committees, ss. 7.3.4.3,
d. Content Advisory Committee, ss. 7.3.4.4.

8. Develop Field-Test Item Sets and Forms

As specified in **Attachment F, Section 7.3.5**, for designs using embedded field testing, it is the responsibility of the Contractor to group the developed items into item sets that will be included in the operational forms of the test for each content area.

- In making the decision as to which items will be field-tested, the Contractor's field-test proposals must consider the areas of greatest need in the item bank, the range of content and rigor included in the items, and the number of

items available to be field tested.

- The Contractor will embed a combination of newly-developed and licensed AIRCore items to build future assessments.

9. Develop Stand-Alone ELA/L Field-Test Item Sets and Forms **(Attachment F, Section 7.3.6)**

The Contractor shall conduct a large scale, stand-alone field test of writing prompts at grades 4 – 11 in December 2014 to establish a bank of prompts for the Department. The overall design shall use a matrix sample to calibrate the pool of items onto a common dimension. Although each student will only see two items, each item will be paired with every other item across the population. This sparse-matrix design allows for the calibration of a large pool of items, even when each student sees very few. The specifics of the field test and sampling design will be agreed to separately between the Contractor and the Department and will conform to the parameters set forth below. As specified in **Section VI, a.** of this Attachment A, the Department reserves the rights to modify, tasks and specifications as needed. **Table 1** below shows the total number of essay responses and students necessary to field test 15 writing prompts per grade.

- Prompts will be constructed to elicit the range of writing activities targeted in the Florida Standards,
- Essay responses will be calibrated and equated to place the entire bank of writing prompts on a common scale to support fair and valid reporting of student writing performance.
- Scored essay responses will also be used to develop and cross-validate the statistical scoring model for each prompt.
- For the stand-alone field test design, each participating student shall be administered two writing prompts. The administration of two prompts is necessary to execute a robust linking design that places all prompts on a common writing scale.
- The Contractor shall administer the writing prompts using its stand-alone field test engine, which randomly samples items for administration to students.
- The scope for the field test includes 15 unique prompts per grade in grades 4 – 11. The field test design will require 3,000 scored responses per prompt. Each student will receive two prompts – one long and one short. Prompts will be double (human) scored.

Table 1. Projected Number of Essay Responses for Scoring, Number of Students, and Number of Florida Schools Necessary to Achieve the Target Student Sample Size.

Number of Prompts	Average Responses per Prompt	Total Responses	Average Number of Linked Responses between Prompt Pairs	Total Students	Average Number of Florida Schools Necessary to Obtain Sampled Responses		
					Elementary	Middle Schools	High Schools
15	3,000	45,000	143	15000	169	85	67

Prompt development shall follow the Department's item development and review committee process as outlined in the Contract. A draft schedule and list of tasks is included below.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

Writing Independent Field Test Overview

High Level Tasks	Start	End
Writing Blueprint & Writing Task Development Plan Finalized	May	June
Field Test Design and Sampling Plan	May	June
Item Specifications Development	May	June

FDOE Review and Approvals of Prompts & Rubrics	25-Aug	8-Sep
Prompt & Rubric Final Resolution and Finalization	9-Sep	10-Sep
Test Admin Manual Online Only	Sept	Nov
Handscoring Specifications	Aug	Nov
Item Bias Review Committee Meetings	11-Sep	12-Sep
Item Community Sensitivity Review Committee Meeting	11-Sep	12-Sep
Item Content Review Committee Meeting	15-Sep	17-Sep
Writing Task Committee Resolution	17-Sep	23-Sep
Field Test Item Pool Lock	23-Sep	
Configuration File Building for Online FT Forms	24-Sep	4-Nov
Deploy to Online Testing System	5-Nov	25-Nov
TDS UAT	26-Nov	28-Nov
FT Administration with Help Desk	1-Dec	15-Dec
Range finding	Mar (2015)	Apr (2015)
Scoring	June (2015)	June (2015)
Data Review	Jul (2015)	Jul (2015)

10. Constructing Test Forms
As specified in **Attachment F, Sections 7.3.7 - 7.3.7.5**, the Contractor is responsible for constructing test forms as follows:
    a. Test Construction Specifications, ss. 7.3.7.1
    b. Test Construction System, ss. 7.3.7.2
    c. Construct the English Language Arts/Literacy, and Algebra 1, Algebra 2, and Geometry Retake Forms, ss. 7.3.7.3. All EOC and ELA/L retakes are machine-scorable online and on paper, except for Writing prompts previously identified.
    d. Prepare Camera-Ready or Screen-Ready Test Forms, ss. 7.3.7.4
    e. Interpretive Products, ss.7.3.7.5
    Required Products include;
        1) Understanding Florida's Assessment Reports
        2) Sample Test Materials (STMs)
        3) English Language Arts/Literacy and Mathematics Scoring Guides
        4) Computer-Based Test (CBT) Practice Tests
        5) Test Item Specifications
11. Production of Printed Test Materials
As specified in Attachment F, Section 7.3.8, 1. – 5., the Contractor is responsible for producing all printed test materials.

12. Production of Computer-Delivered Products

As specified in Attachment F, Section 7.3.9, 1. – 8., the Contractor is responsible for producing all versions of computer-delivered products developed for this project, including test forms. These products include all information, text, and graphics that will be presented to computer-based test users.

Production of Paper-Based and Computer-Based Test, Style Guide, and Braille Production Procedures

As specified in **Attachment F, Section 7.3.10**, the Contractor is responsible for all aspects of production for the CBT system, secure web-based reporting site, and printed materials. For each publication, the Contractor will submit product specifications that identify printing plans, type size and style, ink and paper color, paper quality, and layout.

13. Produce Special Formats and Accommodations for Students with Disabilities

As specified in **Attachment F, Section 7.3.11 and Appendices E and G**, the Contractor is responsible for providing the following special formats and accommodations for students with disabilities;

a. Paper-Based Accommodations, ss. 7.3.11.1, 1.- 8.,

The Contractor will produce the following special accommodations for students and handle any additional requirements related to the use of these accommodations. The requirements for One Item Per Page and Reading Passage Booklets will be met via the Contractor's Print on Demand function.

- Braille (contracted and uncontracted)
- Large Print

b. Computer-Based Accommodations, ss. 7.3.11.2, 1. – 6.

The computer-based system will provide the following special accommodations for students and handle any additional requirements related to the use of these accommodations, in addition to providing paper-based versions. The Contractor's system shall support these accommodations. The Department understands that some of the accommodations require content annotation, the availability of which is shown in Exhibit 7.3.11.2-1 of Exhibit H (Contractor's Proposal). As shown, some of these functions depend on item-level tagging that is not included (or required) in the base scope of this Contract.

1) Screen Reader
2) Increased Font Size (Large Print and Zoom)
3) Font and Background Color (Color Contrast)
4) Assistive /Adaptive Devices
5) English-to-Heritage Language Translation Dictionary
6) English-to-Sign Language Translation Dictionary

14. Test Administration,

As specified **Attachment F, Section 7.4.0 -7.4.6.1, Transition to FSA Computer-Based Tests in Florida Table below,** the Contractor is responsible for all aspects of test administration described in this section including;

a. Packing and Distribution of Materials 7.4.1 ss. 1.– 8 a. – x.
b. Missing Materials Report and Inventory 7.4.2
c. Disposition and Storage of Materials 7.4.3
d. Retrieval of Answer Sheets and Test Books 7.4.4
e. Innovative Product Design 7.4.5
f. Printed Products – Administration 7.4.6
g. Stages of Development of Printed Products – Administration 7.4.6.1

15. Test Administration Manuals

The Department recognizes the Contractor has proposed approaches to meeting these requirements that achieve the requirements of Attachment F in different ways. The following are the census pencil/paper administrations in this Contract:

- Grade 3 ELA x 3 years
- Grade 3 Math x 2 years
- Grade 4 ELA x 1 year
- Grade 4 Math x 2 years

All high school and End-of-Course assessments are currently computer-based assessments and are anticipated to remain as such. Grade 11 English Language Arts/Literacy and Algebra 2 End-of-Course Assessments will be implemented as computer-based assessments.

	Mathematics	Transition to CBT*	CBT	CBT	CBT
*Update to transition the identified grades/subjects to the computer one year earlier than originally stated in ITN 2014-47.					

16. Test Administration Ancillary Materials
As specified in **Attachment F, Sections 7.4.7 – 7.4.7.14**, the Contractor will provide Test Administration Ancillary materials that meet the requirements in the manner described in Attachment H or another mutually-agreeable manner.

17. Online Management System
As specified in **Attachment F, Section 7.4.8 – 7.4.8.4**, The Contractor's online management system described in this section will be the primary resource for all student data management (paper-based and computer-based), as well as test administration and reporting tasks.
a. Test Staff Contact Information 7.4.8.1
b. Test Staff Passwords 7.4.8.2
c. Test Session Requirements 7.4.8.3
d. Security Requirements 7.4.8.4
The Department understands the Contractor is meeting these requirements by providing a license to use the Contractor's proprietary systems for this Contract. The Contractor's systems operate and are configurable in the

manner described in **Attachments H, I, and J.** The Department agrees that the requirement in **Attachment F** that "The Contractor will make any requested changes to such systems" is satisfied as specified above. The Contractor shall consider all Department requests for new functionality as part of the Contractor's annual software release planning.

18. Computer-Based Test Administration Overview,

As specified in **Attachment F, Section 7.4.9 – 7.4.9.10**, the Contractor will provide a customizable Computer-based Test System to meet the needs of Florida students, school and district personnel, and the Department.

a. Hardware and Software Requirements, ss. 7.4.9.1
b. Eligible Device Specifications, ss. 7.4.9.2
c. System Performance Requirements, ss. 7.4.9.3
d. Connectivity Requirements, 7.4.9.4
e. Test Site Set-Up/Certification Requirements, ss. 7.4.9.5
f. Computer-Based Test Presentation Requirements, ss. 7.4.9.6
g. Computer-Based Test Screen Layout Requirements, ss. 7.4.9.7
h. Training Delivery Requirements, ss. 7.4.9.8, with the exception that all onsite training has been removed from Years 2, 3 and all Renewal Years
i. Technology-Supported Item Types, ss. 7.4.9.9
j. Customer Service and Technical Support, ss. 7.4.10

As with the Online Management System, the Department understands the Contractor is meeting these requirements by providing a license to use the Contractor's proprietary Test Delivery and related systems for this Contract. The Contractor's systems operate and are configurable in the manner described in **Attachments H, I, J and K.** The Contractor agrees to work with the Department to amend the specifications, expectations, and requirements to ensure that the Florida testing program keeps pace with the expanding capabilities of test delivery and management via computer. The Contractor will do this by considering all Department requests for new functionality as part of the Contractor's annual software release planning.

19. Scanning, Scoring, and Reporting

As specified in **Attachment F, Section 7.5.0 – 7.5.6.8**, the Contractor will provide services in accordance with the requirements for scanning, scoring, and reporting for this project. **Section 7.5.2** provides details for preparing school and student information, and **Sections 7.5.3, 7.5.4, and 7.5.5** provide the requirements for scanning, scoring, and reporting, respectively. The steps necessary to verify the accuracy of these procedures are described **in Section 7.5.6.** Services and requirements under this section are as follows,

a. Scoring and Reporting Specifications, ss. 7.5.1
b. Preparing School and Student Information (MSID and PreID), ss. 7.5.2
c. Scanning/Editing PBTs and Extracting CBT Records, ss. 7.5.3
d. Scoring, 7.5.4
   1) Types of Scored Files, ss. 7.5.4.1
   2) Types of History Files, ss. 7.5.4.2
   3) Types of Scores and Codes on the SSR/DSRs, ss. 7.5.4.3
   4) Handling Special Print Documents, ss. 7.5.4.4
   5) Handscoring, ss. 7.5.4.5. Other than the Writing items (operational and standalone field test) identified herein, the only handscoring shall be three operational constructed response items on each of the eight census paper-pencil administrations identified herein.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

e. Reporting, ss. 7.5.5
- Student Reports; the Contractor will provide one (1) hard copy, one sheet/two pages per subject. These are the only printed reports.
- School Report of Students
- District Report of Schools
- State Report of Districts
- District Summary
- State Summary

1) Initial Reporting Guidelines, ss. 7.5.5.1
2) Late Reporting Guidelines, ss. 7.5.5.2
3) Close-Out and Annual Reporting Guidelines, ss. 7.5.5.3
4) Demographic Reporting Guidelines, ss. 7.5.5.4

f. Verifying Data, ss. 7.5.6
1) Checking Mock Data, ss. 7.5.6.1
2) Checking Early District Return Data, ss. 7.5.6.2
3) Checking Data for Anomalous Scores, ss. 7.5.6.3.
4) Checking Full-State Data – Initial Reporting, ss. 7.5.6.4.
5) Checking Graduating Student Scores (Manual Rescore), ss. 7.5.6.5
6) Checking Late Reports, ss. 7.5.6.6
7) Checking Close-Out and Annual EOC Files, ss. 7.5.6.7
8) Checking Demographic Files, ss. 7.5.6.8

Note: All requirements to provided data files, etc. by CD/DVD/Jump Drives have been eliminated. Districts will download data files available from AIR's online reporting system.

20. Scaling, Equating, Scoring, and Special Psychometric Studies

As specified in **Attachment F, Section 7.6.0 – 7.6.3.6.3,** the Contractor will be responsible for drawing samples from the populations of students, for calibrating field-test items, for constructing new test forms for future administrations, and for Scaling, Equating, and Scoring (SES) of the assessment system. The system is complex and requires the Contractor to provide knowledgeable and experienced staff, including psychometricians and programmers. The Contract includes a budget for a Scaling, Equating, and Scoring (SES) subcontractor of $200,000 per year. The Contractor will provide Scaling, Equating, Scoring, and Special Psychometric Studies services as specified in the sections below.

a. Assessments, ss. 7.6.1
1) Florida Standards Summative Assessments (Scaling, Equating, and Scoring), 7.6.1.1
2) Retake Assessments (Scaling, Equating, and Scoring), 7.6.1.2

b. Scaling, Equating, and Scoring (Psychometrics), ss. 7.6.2
1) Scaling and Equating Team, ss. 7.6.2.1.
2) Selection of Calibration Samples, ss. 7.6.2.2

c. Technical Oversight and Special Studies, ss. 7.6.3
1) Contractor's Role, ss. 7.6.3.1
2) Technical Report, ss. 7.6.3.2
3) Transitioning from FCAT 2.0 and EOC Assessments to Florida Standards Assessments
4) (FSA) – Linking the Scales, ss. 7.6.3.3,
5) Implement Achievement Level Standard Setting Meetings, ss. 7.6.3.4,
6) Vertical Scaling, ss. 7.6.3.5,
7) Scaling and Equating Studies, ss. 7.6.3.6
   - Investigate the Comparability between Devices Delivering Assessments, ss. 7.6.3.6.1
   - Linking Florida Standards Assessments to Other Assessments Measuring the Same Standards, ss. 7.6.3.6.2
   - Linking Florida Standards Assessments to International Assessments, ss. 7.6.3.6.3

21. Program Management

As specified in **Attachment F, Section 7.7.0 - 7.7.10**, the Contractor will designate a Senior Program Manager who will have overall, daily responsibility for all processes and deliverables under the full scope of this program in

accordance with the Contractor's Management Plan submitted as a part of the Contractor's Technical Response **(Attachment H).** The Chief of the Department's Bureau of K-12 Assessment will be assigned as the Program Manager for the Contract under the overall supervision of the Assistant Deputy Commissioner, Office of Assessment, Division of Accountability, Research and Measurement

a. Provisions Governing the Work of the Contractor
As specified in **Attachment F, Section 7.7.1 a. – d.,** The procedural requirements identified in this section shall govern the work of the Contractor. This section establishes specific requirements and general principles by which the program will be managed.

b. Contractor Staff and Responsibilities
As specified in **Attachment F, Section 7.7.2, a. – d, and h.**, the Contractor will be responsible for assigning professional staff members who are qualified, experienced, and capable of providing technical assistance to the Department in accordance with the staffing requirements specified in this section. The Contractor shall maintain a communications chart showing primary and secondary contacts for specific topics/areas.

c. Subcontractors
As specified in **Attachment F, Section 7.7.3,** the Contractor is responsible for complying with the requirements of this section concerning the employment of Subcontractors and assumes full responsibility for all services provided under the Contract, whether or not they are performed or produced by the Contractor or by Subcontractors as applicable. The Department will consider the Contractor to be the sole point of contact for contractual matters, including payment of any and all charges resulting from the Contract.

d. Program Management Communication
As specified in **Attachment F, Section 7.7.4** the Contractor is responsible for cooperating with the Department for communication matters as indicated in this section.

e. Program Management Meetings
As specified in **Attachment F, Section 7.7.5** , the successful operation of the program will require regular management meetings between the contractor and Department staff. At the Department's request, the management meetings will take place in Tallahassee, the Contractor's headquarters or other worksite, or in a location convenient and agreed upon by the contractor and the Department. The Contractor should anticipate that **the first comprehensive program management meeting will take place at the Contractor's headquarters within thirty (30) days of contract execution.**

f. Program Management Reports
As specified in **Attachment F, Section 7.7.6,** the Contractor will be responsible for **five (5)** types of reports to be prepared by the Contractor to facilitate and document program management communications with the Department: (1) the Program Schedule, (2) the Weekly Management and Weekly Action Item Reports, (3) a Technical Report, (4) Annual Program Review, and (5) the Accounting Report. In addition to written reports, the Department will require the Contractor's participation in presentations to Department senior management or other entities at places and times determined by the Department.

g. Meetings Involving Florida Educators and Other Citizens
As specified in **Attachment F, 7.7.7,** the Contractor will be responsible for arranging, organizing, and paying the cost of bringing participants to specific meetings as identified in the Contract. This section identifies points at which meetings with groups of Florida educators and other citizens will be conducted to propose development and/or management guidelines, to draft products, or to review work and products produced by the Contractor. **The Meeting Schedule is included as Attachment A, Exhibit 1 Meetings of Educators and Other Citizens.**

h. Communication between the Contractor and Districts
As specified in **Attachment F, Section 7.7.8,** all communication between the Contractor and school districts must be directed through or receive prior approval by the Department. Memos required to implement various aspects of the assessment will be prepared by the contractor and approved by the Department prior to release. The contractor will be required to email, mail, or fax memoranda or sets of instructions to district coordinators of assessment as instructed by the Department.

i. Reimbursable Funding Categories
As specified in **Attachment F, Section 7.7.9,** six (6) funding categories are designated for specified program functions and may be used only for those functions. Use of these funds requires authorization by the Department contract or program manager or program area leads.

1) Consultant Services, ss. 7.7.9.1
2) Contingency Services, ss. 7.7.9.2
3) Author's Alterations and Design Control, ss. 7.7.9.3
4) Provision for Meetings with Florida Educators, ss. 7.7.9.4
5) Provision for Meetings with Department Staff, ss. 7.7.9.5
6) Contractor Staff Positions, ss. 7.7.9.6

j. Final Delivery of Materials

As specified in **Attachment F, Section 7.7.10**, the Contractor agrees to deliver to the Department, upon request, all materials and products in all forms that are developed for and used in conjunction with this program, including test books, answer documents (paper and PDF), final electronic source files of interpretive products, software source code, and ancillary materials, PDFs, and electronic files within 30 days following acceptance by the Department of the final report for the program. **Payment of the final program invoice will not be made until all materials and certification of destruction, as appropriate, are received and approved by the Department and final payment resolution is agreed to by both parties.**

At the completion of the Contract, all data files, including those containing items or graphics, remaining in the possession of the Contractor will be destroyed once all handoffs are made to the next contractor. Written verification of destruction will be provided to the Department as part of the final contract report. Destruction will not take place until authorized by the Department.

C. Governing Statutory and Administrative Requirements.
The statutes and administrative rules or regulations to be implemented by this project are as follows:
State: Florida Statutes, 1008.22
Federal: No Child Left Behind Act of 2001 and Public Law 107 - 110

D. Required Outcome of the Project.

To provide student academic achievement and learning gains data to students, parents, teachers, school administrators, and school district staff. This data is to be used by districts to improve instruction; by students, parents, and teachers to guide learning objectives; by education researchers to assess data; and by the public to assess the cost benefit of the expenditure of taxpayer dollars. The assessment must be designed to:

1. Assess the achievement level and annual learning gains of each student in ELA/L and Mathematics,
2. Provide data for making decisions regarding school accountability, recognition, and improvement of operations and management, including schools operating for the purpose of providing educational services to youth in Department of Juvenile Justice programs,
3. Identify the educational strengths and needs of students and the readiness of students to be promoted to the next grade level, to graduate from high school, and to succeed in college and in careers,
4. Assess how well educational goals and curricular standards are met at the school, district, and state level, and at the national level, to the extent possible.

E.. Role of Contractor in the Project Outcome.

The Contractor will provide services for the implementation of computer-based and paper-based statewide summative assessments aligned to the Florida Standards for administrations beginning in spring 2015 and continuing through 2016-17 for the base contract with three one-year optional renewals for the administrations in 2017-18, 2018-19, and 2019-20. Henceforth, in this document, this test shall be called the Florida Standards Assessment (FSA).

The Contractor will provide the Department with a criterion-referenced achievement test, aligned to and measuring mastery of the Florida Standards in English Language Arts/Literacy (ELA/L) and Mathematics proficiency for administration to Florida public school students

F. Role of the Department.

1. To cooperate in all matters requiring concurrence or approval in order that the Contractor will not be unduly delayed in performing.

2. To designate in writing to the Contractor a Contract Manager to act for the Department in all matters pertaining to this Contract and to accept and approve all deliverables and invoices.
3. To pay the Contractor the sum of : **One hundred and seven million, four hundred and sixty-nine thousand, four hundred and twenty-eight dollars and no cents ($107,469,428.00)** as specified in **Section II. of Attachment B**, for providing satisfactory products and services, as specified in **Section I, A-C.** above, with payment to be made as provided in **Attachment B and Attachment B, Exhibit 1**.

II. Project Phases and Deliverables (include associated tasks and documentation to be used as evidence of completion):

A.. Description of the Major Phases Stages or Other Organizational Structure of the Project.

As defined and detailed in **Section I, A-C of this Attachment A, Sections 7.0 – 7.7.10 of Attachment F (ITN), Attachment H (Contractor's Technical Response), and Attachments J and K, BAFOs.**

B. Deliverables.
See Deliverables and Deliverables Schedule included in the Contract as **Attachment B, Exhibit 1**. The dates established in the initial Deliverables Schedule are subject to change pending the submission and approval of the Project Schedule. Once the Project Schedule is received and approved by the Department the Contractor and the Department agrees that a contract amendment will be completed to align the deliverables schedule, meetings and testing schedules and all services and activities under the Contract with the approved Project Schedule.

D. Criteria for Final Completion of the Contract.
The criteria for final completion of the Contract are the delivery to, and approval by, the Department of all Deliverables required by the Contract.

E. Acceptance Testing.
To implement the provisions of **Attachment C, Section IV.**, Deliverables shall be approved in accordance with the following acceptance testing plan:
- Upon delivery to and acceptance of the required products and services by the Department's Contract Manager as applicable.

F. Software Updates.
If the project involves the use of software to be provided by or through the Contractor, periodic updates to such software will be handled in accordance with the following: upon delivery to and acceptance of the required products and services by the Contract Manager, as applicable.

III. Modification of Standard Terms and Conditions.
Each of the following enumerated provisions supersedes or modifies, as indicated, the Section of **Attachment C**, Standard terms and Conditions, to which it expressly refers:

A. **Attachment C, Section XXVII** is hereby deleted and replaced by the following;
XXVII. The Contractor shall indemnify, defend and hold harmless the Department, its attorneys, agents and employees, from and against any and all third party claims, suits, debts, damages, and causes of action, whatsoever ("Claims"), whether arising in law or in equity, caused by Contractor's failure to perform under this Contract or the negligent, reckless, or intentional misconduct of the Contractor and persons employed or utilized by the Contractor under this Contract. This indemnification provision shall not be construed to create any private cause of action by third parties against the Department or the Contractor where such cause of action would otherwise be barred by the doctrine of sovereign immunity. Further, this indemnification provision shall not be construed as a waiver of any defenses that the Department or the Contractor may have to third party lawsuits. The indemnification shall include reasonable attorney fees and costs incurred by the Department, its attorneys, agents and employees, in the defense of any such claim, suits or causes of action, as aforesaid.

The Contractor's obligations under the preceding paragraph with respect to any legal action are contingent upon the Department giving the Contractor (1) written notice of any action or threatened action, (2) the opportunity to take over and settle or defend any such action at Contractor's sole expense, and (3) assistance in defending the action at Contractor's sole expense. The Contractor shall not be liable for any cost, expense, or compromise incurred or made by the Department in any legal action without the Contractor's prior written consent, which shall not be unreasonably withheld.

B. **Attachment C, Section XI** in amended to add the following clarifying language;
1. AIR will use using AIR software and providing the Department access to AIR and Utah intellectual property to perform the services herein during the term of this Contract, The Department agrees:
   - AIR will retain ownership of all software and other AIR intellectual property (IP), including AIRCore test items,

- Utah will retain ownership of all SAGE test items,
- Florida will retain ownership of items developed specifically for Florida.

2. Any implied or actual license for the Department to benefit during the term of this contract from this IP shall expire with the contract.
3. The Department accepts that Utah will suffer damages if Florida needs to, or unintentionally, releases items. In this case, the Department agrees to pay Contractor $5,000 per released item for any item released (intentionally or unintentionally). AIR will pay this money to Utah to reimburse Utah for the cost of replacing these items in the pool.
4. Any references in **Attachments H, I, J** and **K** to licensing Smarter Balanced test items is deleted.

IV. Performance Bond.

As provided in **Attachment C, Section XVII**:

A. The Contractor shall provide a performance bond ☒, another form of security ☐ or not applicable ☐.

B. If applicable, the amount of the Contractor's performance bond is ☐ is not ☒ the total amount of the Contract. If the amount is not the total amount of the Contract it is 10% of the amount of the annual contract. The Contractor may provide annual bonds. The Department shall release each annual bond as soon as the Department can reasonably determine the Contractor has completed all requirements. The Department shall make claims only against a single annual bond for any event leading to a claim that occurred during the period for which the bond covers.

C. If applicable, the form of the other security shall be (NA) in the amount of $ NA.

V. Financial Consequences

The Contract Manager shall periodically review the progress made on the deliverables listed in **Attachment B, Exhibit 1**. If the Contractor fails to meet and comply with the deliverables established in the Contract or to make appropriate progress on contract deliverables the Contract Manager may apply the financial consequences included below. Accurate and timely delivery is imperative and, as a result, the Contract will include the following provisions for the completion of the work and Deliverables identified in the Contract.

- The Contract Manager may approve a partial invoice payment for the deliverables completed during the quarter,
- If there are any incomplete deliverables due for the quarter included on the Contractor's invoice – these will be deducted from the invoice,
- The Contract Manager may request the Contractor redo the work related to a deliverable and adjust any invoice received by the amount of the deliverable. Payment will not be made until the work that must be redone is completed and approved by the Contract Manager,
- The Contract Manager may apply Liquidated Damages as applicable,
- All of the above or,
- Terminate the Contract.

The Contractor will be notified in writing concerning Department action(s), including specifics of the work not provided, the deliverable(s) considered to be incomplete and the partial amount to be paid based on the work completed.

In the event of any delays by the Department in furnishing contractually required information or materials, which cause the Contractor to be delayed in performing work or completing deliverables, the time for performance by the Contractor shall be extended by an amount of time equal to the delay created by such occurrences or a new due date shall be negotiated.

VI. Additional Terms and Conditions.

The Contract includes the following enumerated additional terms and conditions:

A. The Department reserves the right to substitute or modify tasks on a generally equal basis. Substitutions or modifications will be made prior to the Contractor's beginning significant efforts to complete the task. All design changes, substitutions, or modifications will be given to the Contractor in writing. It is not the intent of this provision to increase the scope of work of the Contract but to protect the Department as design changes to improve the assessment become known during the implementation of development and administration activities. The Department also reserves the right to amend the Contract to add, modify, or delete designated tasks, products, and/or services related to the core activities of this project.

B. The fundamental purpose of Florida's standards-based assessment program is to provide accurate information on student achievement. The Contractor will utilize every means required to ensure that information created by the project is accurate. The Contractor will be responsible for correcting at the Contractor's expense any errors arising from activities that are the responsibility of the Contractor. This may involve activities such as conducting analyses to identify the cause and extent of errors;

reprogramming or reproducing products or other materials; replacing data files; reproducing reports; and shipping replacement products or reports to the Department or districts using expedited shipping services.

C. News releases or public announcements pertaining to this Contract, or work completed under the Contract will not be made without prior written approval from the Department.

D. Liquidated Damages

a. Accurate and timely delivery is imperative and, as a result, the contract will include the following provisions for the completion of the Critical (C) and Extremely Critical (XC) Deliverables identified in this Contract

- The Contractor's failure to complete Critical and Extremely Critical Deliverables both correctly and on time will result in substantial injury to the Department and the State of Florida, but the amount of damages resulting from such injury cannot be calculated with certainty.
- Each such failure to complete Critical and Extremely Critical Deliverables both correctly and on time is hereinafter referred to as a default. Defaults shall be deemed corrected on the date that the Critical and Extremely Critical Deliverables have been correctly completed.
- For each default, the Contractor shall be liable to the Department for liquidated damages and not as a penalty, as set forth below. Other than Termination, the Department and Contractor have agreed these liquidated damages are the sole and exclusive remedies for these issues and the Department does not intend to apply multiple Liquidated Damages to the same underlying event.
- Critical and Extremely Critical Deliverables are identified **in Attachment B, Exhibit 1**

1) Critical Deliverables: For each default on performance and completion of a Critical Deliverable, it is agreed that for each and every day work remains uncompleted beyond the time set for its completion the Contractor shall be liable to the Department in a specified amount of **five thousand dollars ($5,000.00)** per business day as liquidated damages for such delay, and not as a penalty, from the date of notice by the Department until the default has been corrected
2) Extremely Critical Deliverables For each default on completion of an Extremely Critical Deliverables, the Contractor shall be liable to the Department in a specified amount per calendar day from the date of notice by the Department until the default has been corrected. The specified amount of damages is defined below:

Schedule of Liquidated Damages
For Extremely Critical Deliverables

Number of business days elapsed after the default	Liquidated Damages
First	$5,000.00
Second	$15,000.00
Third	$30,000.00
Fourth	$45,000.00
Fifth	$60,000.00
Sixth	$75,000.00
Seventh/ subsequent days	$125,000.00 per day

3) Dates for delivery of materials in **Attachment B, Exhibit 1**, for Critical and Extremely Critical Deliverables shall not apply for 2014-2015 until mutually verified in writing. Dates for 2014-2015 Critical and Extremely Critical Deliverables must be verified in writing within 30 days of Contract execution.
4) Cap: For each calendar, contract, or fiscal year which corresponds to the period of the performance bond specified in Section IV of this Attachment A the cumulative total of liquidated damages for which the Contractor may be liable shall not exceed, annually, ten percent (10%) of the total contract amount at the time of assessment of liquidated damages. However, the total contract amount will not include renewal years until, and in the amount that, the Contract is renewed.
5) Collection: At its option, the Department shall collect liquidated damages by making claims against the performance bond, from time to time, until the bond has been exhausted or by deducting the liquidated damages from contract payments to the Contractor. In the alternative, the Contractor may make payment to the Department in the amount of such liquidated damages.

6) Deadline Adjustments:

a) In the event the Contractor wishes to propose a change of deadline for a Critical and Extremely Critical Deliverable, the Contractor may propose the change to the Department, in writing. The Department has no obligation to agree to the change, but shall notify the Contractor, in writing, as to whether or not it agrees to the proposed change. If the Department agrees, the modified deadline shall become the effective deadline for purposes of assessing liquidated damages.

b) In the event the Department wishes to change a deadline for an Extremely Critical Work Deliverable to a date which shortens the Contractor's time for meeting the deadline, it shall notify the Contractor of the new deadline in writing in the form of a contract amendment. If the Contractor determines that by exercise of every reasonable effort, the Contractor will be unable to meet the new deadline, the Contractor shall offer a proposed shortened deadline which the Contractor can meet by the exercise of every reasonable effort.

c) In the alternative, the Contractor may propose a contract amendment in which the additional personnel hours needed to achieve the shortened deadline are compensated by a price adjustment.

d) If the parties are unable to reach agreement, the Department shall determine the deadline. However, the issue of whether liquidated damages apply to the Contractor's failure to meet the shortened deadline shall be reached as follows. The parties shall submit to binding arbitration the issue of what date (earlier than the original deadline) the Contractor could have completed the Critical or Extremely Critical Deliverable on time and correctly by exercising every reasonable effort. The date determined through arbitration shall be the deadline for purposes of assessing liquidated damages. Arbitration shall be conducted pursuant to the procedures of the American Arbitration Association, subject to the Florida Arbitration Code, Chapter 682, F.S.

e) Waiver: The Department, in its sole discretion, may waive the imposition of liquidated damages or a portion thereof in a given instance. Such waiver, in any instance, shall not constitute a waiver in any future instance, nor establish any right on behalf of the Contractor to a waiver.

f) Department Approval: In situations where in the Contractor must obtain the Department's approval of an activity or product before the Contractor can complete a Critical or Extremely Critical Deliverable, the Contractor shall be responsible for providing a reasonable time for the Department to complete its review and for the Contractor to correct any deficiencies. In the event the Department's review is not conducted within a reasonable time, as described in Attachment F, Section 7.7.4, that shall be grounds for the Contractor to propose a deadline adjustment pursuant to Subsection 5.19(e)(1), above. The parties' Contract Managers may agree, in writing, in advance, as to the reasonable time for the Department's review of a specific activity or product.

STATE OF FLORIDA, DEPARTMENT OF EDUCATION
PROCUREMENT CONTRACT – ATTACHMENT B
PAYMENT TERMS AND SCHEDULE

The Payment Terms and Schedule for the procurement contract awarded to **American Institute for Research (AIR)**, Contract Number **14-652** are as follows:

I. An "X" beside the correct provision in this section signifies that the provision is applicable to the Contract into which this Attachment B is incorporated.

A. Place an "X" beside *either* 1 or 2:

____1. The total payment shall be the amount entered in the space provided in Section II, below.

Or

_X___2. The total payment shall be an amount not to exceed the amount entered in the space provided in Section II, below.

B. Place an "X" beside *either* 1 or 2:

____1. The total payment shall be paid as a single, lump sum payment upon the Contractor meeting the criteria for completion of the Contract.

Or

__X__2. The total payment shall be paid as scheduled progress payments in accordance with Section III, below, which prescribes the amount of each payment, the specified Deliverable(s) that must be received and approved prior to each payment, and the projected payment date.

Or

____ Not applicable

C. If I.A.2. applies, place an "X" beside any of the following that apply:

__X__1. The total payment includes amounts, which are set aside for specified activities as described in Section IV, below. Records shall be kept by the Contractor to account for amounts earned for each activity. In the event that the full amount set aside for any activity is not earned, the unearned amount shall revert to the Department and shall be reflected as an adjustment to the final payment.

REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

____2. Contract payments shall be based on a system of rates as prescribed in Section V, below, which shall account for all or a portion of the total contract payment also as prescribed in Section V, below.

II. As specified in Section I.A., the amount of the total payment, or the amount that the total payment shall not exceed is the following: **On hundred and seven million, four hundred and sixty-nine thousand, four hundred and twenty-eight dollars and no cents ($107,469,428.00).**

III. The schedule of progress payments, the Deliverable(s) required be receiving and approving, and the projected payment dates are set forth below. The actual date of payment shall be governed by the receipt and approval of the Deliverable(s), not by the projected payment date which is included to assist in planning the Contract activities and managing the project.

This Contract will be paid on a fixed price combination deliverable/cost reimbursement basis, with quarterly payments based on the State of Florida Fiscal Year as specified below;

State Fiscal Year: July 1 – June 30.
State Fiscal Quarters: July 1 – September 30, October 1 – December 31, January 1 – March 31, April 1 – June 30.

Invoice due by: April 30, July 30, October 30, and January 30 of each fiscal year.

See Attachment B, Exhibit 1, Deliverables and Payment Schedule.

IV. The amounts included in the total payment which are set aside for specified activities in accordance with Section I.C.1, above, the specified activity to which each amount pertains, and the criteria under which the Contractor earns portions of the amount which is set aside are described below:

The Contractor shall be paid on a Cost Reimbursement basis for the following categories and amounts which are set aside for specific services as defined below.

Reimbursable Category Type	$ Amount
Consultant Services	$84,375.00
Contingency Services	$84,375.00
Author's Alterations and Design Control	$84,375.00
Provision for Meetings with Florida Educators	$5,491,496.00
Provision for Meetings with Department Staff	$438,750.00
Contractor Staff Positions	$1,800,000.00
Total Reimbursables Base Contract Term:	7,983,371.00

The Contractor shall submit a report of expenditures (Reimbursable Report) by Reimbursable Category Type, with the quarterly invoice and in a format defined by the Department. The Reimbursables Report format may be changed at the discretion and according to the needs of the Department.

- The report will provide a breakdown of all expenditures the Contractor is billing for the quarter, including the name of the Vendor/Contractor paid (as applicable), dollar amount of the expenditure, and other specified information included in the Reimbursables Report.
- Meals: In order to ensure that participants have adequate and timely access to meals given the restrictions On the purchase of food, the Contractor will be responsible for providing efficient options for participants' breakfast, lunch, and dinner at participants' expense. This may include pre-orders of meals at fixed prices, or a comprehensive list of nearby dining options. Dining venues must be at the meeting site or at locations suitably close to the meeting site so as not to adversely impact the meeting schedule.

- The Contractor will maintain in their records documentation for all costs which will be billed against the reimbursable contract budget including; contracts and written agreements, payroll registers and transactions, copies of travel reimbursement forms and supporting documentation, paid receipts for meeting space rental, airfare, rental car, equipment and all other reimbursable costs.
- Each quarter the Department will request documentation for a post audit of the prior quarter's expenditures. The Department will select a sample representation for each invoice and the Contractor will submit the required supporting documentation to the Department as requested and by the date specified.
- All expenditures for reimbursement must be in accordance with the terms and conditions of the Contract and the Department of Financial Services' *Guidelines for State Expenditures* and meet the criteria of being allowable, reasonable, and necessary.
- The Department will issue written notice to the Contractor if there are any issues identified in the post audit. Issues of concern will include, insufficient documentation to support an expenditure including; copies of invoices and proof of payment such as; cancelled checks or credit card statements, expenditures that do not meet the criteria of allowable, reasonable and necessary or are not in accordance with the contract.
- If discrepancies are found in the post audit - unallowed amounts will be returned to the Department or deducted from future reimbursements. Significant or a continuing pattern of discrepancies may result in the Contractor being required to submit 100% of all documentation as a condition for reimbursement.

V. The system of rates upon which contract payments are based is prescribed as follows:

A. As applicable, the type of work or the professional designation of a worker to whom the rate applies, the dollar amount of the rate, and the time unit covered by the rate amount are set forth below:

NA

B. As needed, further description or explanation of the information prescribed in Section V.A, above, such as but not limited to conditions precedent to the commencement of work, payment caps by category, or conditions under which the time unit or dollar amount may be adjusted are as follows:

NA

C. Each invoice which requests a payment based upon the system of rates:

a. shall identify the pertinent dollar amount per time unit and the category of type of work, or professional designation of worker, in language which corresponds to subsection V.A, above;
b. shall specify the totals of the time units and amount of payment sought for each category of type of worker and for each worker, and,
c. shall be documented by time and performance records which are adequate for preaudit and postaudit.

NA

VI. For purchases pursuant to state term contracts, the total payment for completion of all requirements of the Contract which makes specific the Department's procurement under a State Term Contract awarded to the Contractor by the Department of Management Services reflects a savings to the Department in comparison to the total projected amount for the same work under the rates established in the State Term Contract No **NA** as explained below:

VII. Federal funds awarded through the Department by this Contract, if any:

159	Test Administration	PERIODIC: Develop and deliver approved practice tests and tutorials for the computer-based and paper-based assessments (sample test materials and computer-based practice tests).	According to production schedules, all practice materials must be developed and approved on a timeline to be established that offers students enough time to practice prior to each administration. All practice tests (computer-based and paper-based) must contain 10-20 sample items. For the paper-based practice materials, there will be a separate test booklet and a separate answer key booklet for teachers. These paper-based practice materials are produced in ADA-compliant PDF files for posting. Practice materials must also be produced for all accommodated versions (computer-based accommodations and paper-based accommodations, such as braille and large print). ITN Reference 7.3.7.5 and 7.4.9.6	(1) Provide Department email reflecting approval of the practice tests and tutorials that reflect the requirements for each year of the assessment. For year 1 of the contract, this will be PDFs for all grades and subjects, and computer-based practice tests for all grades and subjects that will be offered as computer-based subjects the first year. As grades and subjects are added each year (per the schedule in Appendix A), the appropriate computer-based practice tests must also be released. This delivery includes the annual delivery of requested paper-based accommodated versions, which are the only versions that are shipped to districts. (All others are published or linked for distribution.)	**C**	September 2015	$121,502.00
160					**C**	September 2015	$8,000.00
161					**C**	September 2016	$8,000.00
162	Test Administration	PERIODIC: Develop and deliver a training plan for the initial training and supply materials to support ongoing training for the audiences identified in the contract.	The contractor must train Department, district, and school staff on the setup, features, management, and use of the computer-based platform and online management system at the beginning of the contract. ITN Reference 7.4.7.1 and 7.4.9.8	(1) Provide Department email confirming and approving completion of the initial training and completion of the materials to support ongoing training. (2) Provide Department email approving the final, posted training materials for each administration.		September 2014	$346,402.00
163	Test Administration	PERIODIC: Develop and deliver materials to support ongoing training for the audiences identified in the contract.	The contractor must train Department, district, and school staff on the setup, features, management, and use of the computer-based platform and online management system. ITN Reference 7.6.3.3	(1) Submit final version of the legal opinion document (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the linking plans.		December 2014	$99,654.00
521	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Scales during transitioning years to find out FCAT 2.0 and EOC equivalents based on the performance of students on the Florida Standards Assessments	Conducting all linking operations and scoring activities as laid out in the approved linking specifications. ITN Reference 7.6.3.3	(1) Submit final look-up tables and scored files (secure files) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the files.		May 2015	$122,814.00
522	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Standard Setting Work Plan	Prepare a Standard Setting Work plan for setting achievement level standards for ELA/Literacy, Mathematics, Algebra 1 &2, and Geometry assessments. Plan must include every detail of the methodology, internal and external data files, and the timeline for all of the activities during educator and reactor panel meetings. The Plan must be vetted by TAC members and the methodology must be approved by the department. ITN Reference 7.6.3.4	(1) Submit the final version of Standard Setting Work Plan and relevant materials, such as slides (secure materials), posted to SFTP. (2) Provide Department email reflecting receipt and approval of the documents.		January 2015	$2,000.00
523	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Implement Achievement Level Standard Setting Meetings	Hold the required meetings and collect recommended cut scores from all relevant groups, as described in ITN Reference 7.6.3.4	(1) Submit the initial version of the Standard Setting Technical Report (secure file), including recommended cuts and impact data, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.		September 2015	$230,802.00

3	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Critical and Extremely Critical Tasks**	**Due Date(s)**	**Deliverable Price**
524	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Finalizing Standard Setting Technical Report	Preparing Technical Reports, as described in section 7.6.3.4. Collecting Feedback from the Department and Technical Advisory Committee (TAC), finalizing the reports after incorporating the feedback, and submitting the final versions of the reports to the Department. ITN Reference 7.6.3.4	(1) Submit the final version of the Standard Setting Technical Report (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.		October 2015	$34,179.00
525	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Vertical Scaling Specifications	Preparing a detailed plan for conducting all vertical scaling procedures. The plan will include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.5 The plan must be vetted by TAC members. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Post the plan for Vertical Scaling (secure file) via SFTP. (2) Provide Department email reflecting receipt and approval of the Vertical Specifications.		December 2014	$10,000.00
526	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Vertical Scaling Activities and Preparing Technical Report	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Submit Final Technical Report and Scored SSR Files (secure files), including vertically aligned scale scores, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.		August 2015	$20,452.00
527	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Specifications for Comparability Between Devices Delivering Assessments	Preparing a detailed plan for conducting comparability study. The plan will include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.7 The plan must be vetted by TAC members. The plan will include the degree of comparability of item-level and test-level statistics across devices. The plan will include the degree of comparability of item-level and test-level statistics across various input types. For the questions above, the plan will address to what degree of comparability can be obtained through scaling items onto a single metric, linking or concordance. The plan will also include what interactions exist among device, input type and item/task characteristics, grade, subject, and relevant student characteristics. ITN Reference 7.6.3.6.1	(1) Submit the plan for conducting the comparability study (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.		December 2015	$6,000.00

541			challenging program that requires year-round activity and close attention to overlapping tasks for different years and the impact on project resources. The contractor is expected to provide a sufficient number of highly-qualified personnel to work closely with the Department to manage the contract. Specific requirements are in 7.7.2 of the ITN.	operational for the invoice period. (2) Provide an organization chart with the appropriate staff indicated for each invoice period. (Quarterly invoices to occur in February, May, August, and November)		June 2016	$2,836,585.00
542	Program Management	Periodic: Program Management Reports: Weekly Management and Action Item Report	The Weekly Management Report and Action Item Report will report the status of recent and upcoming tasks, highlighting those leading up to deliverables and critical tasks, report progress on program issues, identify unresolved issues, and maintain a list of requests requiring change orders or amendments. The weekly	(1) For each invoice period, provide one management report from each month since the previous invoice period. (Quarterly invoices to occur in February, May, August, and November)		June 2015	$321,310.00
543						June 2016	$321,310.00
544	Program Management	Periodic: Annual Program Review	Review will include a record of the contractor's services and deliverables in response to contractual/ITN requirements. This review must identify major program accomplishments and successes, as well as areas of the program that require changes	(1) Provide evidence of Department acceptance and approval of the annual program review for the previous administration year.		November 2015	$78,060.00
545						November 2016	$78,060.00
546	Program Management	Periodic: Program Management Reports: Collect Accounting Reports	A summary of the Quarterly Accounting Reports, including expenditures by program task and level of effort as well as expenditures and balances of Reimbursable Funding Categories identified in Section 7.7.9, including balances resulting from executed change orders and contract amendments. ITN Ref 7.7.6	(1) For each invoice period, provide the quarterly accounting reports. **Note: Invoices will be received by the 30th of the month subsequent to the prior quarter as specified in ATTACHMENT B, SECTION III. The amounts indicated for each fiscal year will be paid at one (1) quarter) of the amount specified in the deliverable price for the year.**		2014	$99,882.00
547						2015	$99,710.00
548						2016	$99,710.00

Contract No.: 14-652
Attachment C
Standard Terms and Conditions

STATE OF FLORIDA, DEPARTMENT OF EDUCATION
STATEMENT OF WORK – ATTACHMENT C
STANDARD TERMS AND CONDITIONS

Contract No. 14-652

I. Pursuant to S. 287.058(1), Florida Statutes ("F.S."):

A. Bills for fees or other compensation for services or expenses shall be submitted in detail sufficient for a proper preaudit and postaudit thereof.

B. Travel expenses will be reimbursed only if expressly authorized by the terms of the Contract. Bills for any travel expenses shall be submitted in accordance with s. 112.061, F.S.

C. The Department may unilaterally cancel this Contract if the Contractor refuses to allow access by members of the public to all documents, papers, letters and materials made or received in conjunction with the Contract that are subject to Chapter 119, F.S., and are not exempt from public inspection by s 119.071, F.S., or by other provisions of general or special law.

D. The Deliverables specified in the Contract must be received and accepted in writing by the Department's Contract Manager before Contractor is entitled to payment.

E. To complete this Contract, all services must be performed and/or goods received on or before the date(s) specified in the Contract.

F. If this Contract is expressly renewable, it may be renewed for a period that may not exceed three years or the term of the original contract, whichever is longer. The renewal price for the contracted service is set forth in the bid, proposal, reply. Cost for renewal shall not be changed. Renewals shall be contingent on satisfactory performance evaluations by the Department and subject to the availability of funds. Exceptional purchase contracts pursuant to s. 287.057(3)(a) and (c), F.S., may not be renewed.

II. The Contractor shall prepare an invoice for the amount due and mail it to the Department of Education Comptroller after having delivered the products and services required under this Contract to the Contract Manager. The invoice shall set forth details sufficient for a proper pre-audit and post-audit including, where applicable, the products and services delivered and completion dates. Upon receipt of the invoice, the Department of Education Comptroller will request confirmation from the Contract Manager that the delivered products and services are satisfactory and payment is due. If for any reason they are not satisfactory, payment will be withheld until the unsatisfactory condition or conditions are corrected. Upon receipt of the Contract Manager's approval, the Department of Education Comptroller shall process each invoice in accordance with the provisions of s. 215.422, F.S.

A. Contractor agrees to submit invoice within thirty (30) days of the Department's acceptance of deliverables. It is understood that should Contractor fail to submit invoice within thirty (30) days following the Department's acceptance of the deliverables, the Department shall not be responsible for payment thereof under this contract or quantum meruit.

III. Section 215.422, F.S., provides that agencies have five (5) working days to inspect and approve goods and services, unless bid specifications or the Contract specifies otherwise. With the exception of payments to health care providers for hospital, medical, or other health care services, if payment is not available within forty (40) days, measured from the latter of the date the invoice is received or the goods or services are received, inspected and approved, a separate interest penalty set by the Comptroller pursuant to s. 55.03, F.S., will be due and payable in addition to the invoice amount. To obtain the applicable interest rate, please contact the Department's Fiscal s. at 850/245-0401 or Purchasing Office at 850/245-0483. Payments to health care providers for hospitals, medical, or other health care services, shall be made not more than thirty-five (35) days from the date of eligibility for payment is determined, and the daily interest rate is .02740 percent. Invoices returned to a vendor due to preparation errors will result in a payment delay. Invoice payment requirements do not start until a properly completed invoice is provided to the agency. A Vendor Ombudsman, whose duties include acting as an advocate for vendors who may be experiencing problems in obtaining timely payment(s) from a State Agency, may be contacted at 866/352-3776 or by calling the Chief Financial Officer's Hotline, 800/342-2762.

IV. As used in this Contract, the term "Deliverable" refers to tangible "commodities", as defined in s. 287.012(5), F.S., which the Contractor provides pursuant to the Contract and to reports or other tangible or documentary evidence which demonstrate that the Contractor has performed the services required by the Contract. The following provisions govern Deliverables, as applicable:

A. Each Deliverable must be physically delivered to the Department's Contract Manager, or to a person designated by the Contact Manager. If delivery is made to a designee, the Contractor shall give written notice to the Contract Manager of the delivery. A Deliverable is not received until the Contract Manager has physical control of deliveries or has written notice that the designee has physical control.

B. In each case in which the approval of a Deliverable is dependent upon tests being conducted by the Department or Contractor, independently or jointly, the Department's inspection and approval of the Deliverable shall not be subject to the five (5) day provision in s. 215.422, F.S., but shall be governed by the terms and conditions of the acceptance testing plan as stated in Attachment A, until approved in accordance with the plan.

C. In each case of a Deliverable of information technology, as defined at s. 287.012(14), F.S., unless specified otherwise in Attachment A, the acceptance testing plan is deemed to include as a minimum the reliable performance of the information technology in accordance with its design specifications in:

1. a test environment that simulates the production environment as much as is reasonably possible; and
2. the production environment for which it is intended for a period of time sufficient for the information technology to have experienced the major foreseeable exigencies of the production functions.

D. The Department's inspection, including testing when applicable, shall determine whether or not the Deliverables appear to be in compliance with the Contract. The Contractor shall be notified in writing of any apparent deficiency. The written notice shall detail the specific action required by the Contractor to correct the deficiency. The Contractor shall timely correct such deficiency and resubmit the deliverable for acceptance.

V. The Contractor represents and agrees that information submitted in support of its requests for payment is the basis of payment and is true and accurate to the best of knowledge of the responsible signatory. A violation of this provision shall subject the violator to the provisions of s. 68.082, F.S., pertaining to false claims against the State, and/or s. 837.06, F.S., pertaining to false official statements.

VI. This paragraph applies if this Contract expires in a fiscal year subsequent to the fiscal year in which the Contract is entered. The State of Florida's fiscal year comprises July 1 through June 30. The Department's and State of Florida's performance and obligation to pay under this Contract is contingent upon an annual appropriation by the Legislature.

VII. Notwithstanding anything to the contrary contained in a State Term Contract, Contractor warrants that all commodities, as defined in s. 287.012, F.S., shall meet the specifications of the Contract and shall be merchantable and fit for the particular purposes intended by the Contract.

VIII. The Contractor further warrants that as to each Deliverable produced pursuant to this Contract, Contractor's production of the Deliverable, and the Department's use of the Deliverable, will not infringe on the copyrights of any third party. This provision applies to each work of authorship in which copyrights

subsist pursuant to 17 U.S.C. Sections 102-105 and to each exclusive right established in 17 U.S.C. Section 106. In furtherance of this provision the Contractor additionally warrants that:

A. As to each work of software or other "information technology", as defined in s. 287.012(15), F.S., in which copyrights subsist, the Contractor has acquired the rights by conveyance or license to any third party software or other information technology, which was used to produce the Deliverable;

B. As to each image and sound recording incorporated into a Deliverable, the Contractor has acquired the necessary rights, releases, and waivers from the person whose image or sound is included, or from the holder of the copyrights subsisting in the literary, musical, dramatic, pantomime, choreographic, pictorial, graphic, sculptural, motion pictures, audiovisual work or sound recording from which the included image or sound recording was taken.

IX. The Contractor further warrants that the Contractor shall not disclose to any third party, without the express, prior, written approval of the Department, any personally identifiable information about any student. This applies to information which came from any record or report of a Florida public education institution or from any education record which is subject to the Family Educational Rights and Privacy Act, 20 U.S.C. Section 1232g. The terms "record a report" and "student" shall have the meanings prescribed in s. 1002.22(2)(c) and (d), F.S. The term "educational record" shall have the meaning prescribed in 20 U.S.C. Section 1232g(a)(4).

X. In the event that the Governor and Cabinet are required to impose a mandatory reserve on appropriations, the Department shall amend this Contract to place in reserve the amount determined by the Department of Education to be necessary because of the mandatory reserve. Such amendments may provide for adjustments in the Deliverable products and services as may be necessary.

XI. Intellectual property is subject to following additional provisions:

A. Anything by whatsoever designation it may be known, that is produced by, or developed in connection with, this Contract shall become the exclusive property of the of the State of Florida and may be copyrighted, patented, or otherwise restricted as provided by Florida or federal law. Neither the Contractor nor any individual employed under this Contract shall have any proprietary interest in the product.

B. With respect to each Deliverable that constitutes a work of authorship within the subject matter and scope of U.S. Copyright Law, 17 U.S.C. Sections 102-105, such work shall be a "work for hire" as defined in 17 U.S.C. Section 101 and all copyrights subsisting in such work for hire shall be owned exclusively by the Department pursuant to s. 1006.39, F.S., on behalf the State of Florida.

C. In the event it is determined as a matter of law that any such work is not a "work for hire", Contractor shall immediately assign to the Department all copyrights subsisting therein for the consideration set forth in the Contract and with no additional compensation.

D. The foregoing shall not apply to any preexisting software, or other work of authorship used by Contractor, to create a Deliverable but which exists as a work independently of the Deliverable, unless the preexisting software or work was developed by Contractor pursuant to a previous Contract with the Department or a purchase by the Department under a State Term Contract.

E. The Department shall have full and complete ownership of all software developed pursuant to the Contract including without limitation:

1. The written source code;
2. The source code files;
3. The executable code;
4. The executable code files;
5. The data dictionary;
6. The data flow diagram;
7. The work flow diagram;
8. The entity relationship diagram; and
9. All other documentation needed to enable the Department to support, recreate, revise, repair, or otherwise make use of the software.

XII. The Department reserves the right, at its option, to issue a change order to delete work tasks reducing the total Contract amount by up to 10%. An addition of work tasks within the scope of the Contract, an increase in the total Contract amount, or a decrease of more than 10% of the total Contract amount, shall be implemented only by a Contract amendment signed by both the Department and the Contractor.

XIII. Pursuant to s. 216.347, F.S., no funds awarded under this Contract may be used for the purpose of lobbying the Legislature, the judicial branch, or a State agency.

XIV. The Contractor shall grant access to all records pertaining to the Contract to the Department's Inspector General, General Counsel and other agency representatives, the State Auditor General, the Office of Program Policy and Government Accountability, and the Chief Financial Officer.

XV. The Contractor agrees to permit onsite visits by designated Department employees or agents to conduct audits to ensure compliance with Section 20.055, Florida Statutes. These audits may require Department access to records and data, computers and communications devices, and other materials whether owned or operated by the Contractor. Access may include, but is not limited to, user level and/or system level access to any computing or communications device; access to information (electronic, hardcopy, etc) that may be produced, transmitted or stored on the Contractor's equipment or premises; access to work areas; and access to interactively monitor and log traffic on the Contractor's networks.

XVI. The Contractor must carry general liability insurance, which shall include errors and omissions coverage. The amount of coverage shall be a minimum of $1,000,000 or the aggregate total of all contractual agreements between the Contractor and the agencies and political subdivisions of the State of Florida, whichever is greater. The Contractor shall add the Department as an additional insured on the general liability coverage. The insurance shall cover all of the Contractor's operations under this Contract and shall be effective throughout the Term of this Contract, as well as any renewals or extensions thereto. It is not the intent of this Contract to limit the types of insurance otherwise required by this Contract or that the Contractor may desire to obtain or be required to obtain by law. The Contractor must submit a Certificate of Insurance indicating coverage for general liability purposes and additional insured coverage, and shall maintain and pay for same throughout the Term of this Contract. A Certificate of Insurance indicating adequate coverage shall be submitted to the Department prior to the time the Contract is entered. Any and all insurance policies shall be through insurers qualified to do business in Florida.

XVII. The Contractor agrees to provide the Department upon execution of this Contract with a performance bond or other security deposited with the Department in the total amount of the Contract or another amount if specified in the procurement specifications or Attachment A, guaranteeing that the Contractor will perform all work according to this Contract, within the time and price specified in the Contract. A performance bond shall be issued from a surety company, qualified to do business in Florida.

XVIII. The Contractor may not assign or subcontract all or any portion of this Contract without the advance written consent of the Department.

XIX. In all cases in which the Contractor, with the advance written consent of the Department, assigns or subcontracts, all or any portion of the Contract:

A. The Contractor shall monitor the subcontractor or assignee and establish controls to avoid or mitigate risks identified by the Department or the Contractor; and

B. The Contractor shall allow the Department to monitor subcontractor or assignee activity and compliance, and the Contractor shall require the subcontractor or assignee to promptly submit to the Department, at the Department's request, complete and accurate documentation pertaining to the subcontract or the Contract.

XX. The Contractor shall coordinate with and assist the Department's Contract Manager in the performance of the latter's responsibilities, which include without limitation:

A. Monitoring the activities of the Contractor;

B. Receiving and reviewing the reports of the Contractor to determine whether the objectives of the Contract are being accomplished;

C. Receiving and reviewing the invoices for payment of funds to assure that the requirements of the Contract have been met and that payment is appropriate;

D. Evaluating the process used by the Contractor to monitor the activities of any subcontractor or assignee; and

E. Accessing, directly, the subcontractors and assignees, as the Contract Manager deems necessary.

XXI. This Contract may not be modified unless in writing signed by the Department and the Contractor.

XXII. The Department and the Contractor waive application of the principle of contract construction that ambiguities are to be construed against a contract's drafter, and agree that this Contract is their joint product.

XXIII. The Department and the Contractor acknowledge that they have had their respective attorneys review and approve this Contract or that they have had the opportunity to do so.

XXIV. This Contract shall be governed by the laws of the State of Florida, and venue for purposes of any action brought to enforce or construe the Contract shall lie in Leon County, Florida.

XXV. Failure of the Department to declare any default immediately upon the occurrence or knowledge thereof, or delay in taking any action in connection therewith, does not waive such default. The Department shall have the right to declare any such default at any time and take such action as might be lawful or authorized under the Contract, at law, or in equity. No Department waiver of any term, provision, condition or covenant of the Contract shall be deemed to imply or constitute a further Department waiver of any other term, provision, condition or covenant of the Contract, and no payment by the Department shall be deemed a waiver of any default under the Contract.

XXVI. Time is of the essence with regard to each and every obligation of the Contractor contained in the Contract. Each such obligation is deemed material, and a breach of any such obligation (including a breach resulting from the untimely performance thereof) shall constitute a material breach.

XXVII. The Contractor shall indemnify and hold harmless the Department, its attorneys, agents and employees, from and against any and all third party claims, suits, debts, damages, and causes of action, whatsoever, whether arising in law or in equity, arising out of or relating to Contractor performance or failure to perform under this Contract. The indemnification shall include reasonable attorney fees and costs incurred by the Department, its attorneys, agents and employees, in the defense of any such claim, suits or causes of action, as aforesaid.

XXVIII. This Contract may be cancelled by written agreement of the Department and the Contractor specifically referencing this Contract. Such agreement shall specify the remaining measures necessary to be taken by each party.

XXIX. The Department reserves the right to cancel this contract without cause by giving the Contractor thirty (30) days written notice.

XXX. Should Contractor fail to perform to Contract terms and conditions, Contractor shall be notified in writing, stating the nature of the failure to perform and providing a time certain (which shall be not less than ten (10) days following receipt of such notice) for correcting the failure. Such failure to perform shall otherwise be dealt within accordance with Rule 60A-1.006, F.A.C.

XXXI. A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a bid on a contract to provide any goods or services to a public entity, may not submit a bid on a contract with a public entity for the construction or repair of a public building or public work, may not submit bids on leases of real property to a public entity, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, F.S., for CATEGORY TWO for a period of thirty-six (36) months from the date of being placed on the convicted vendor list.

XXXII. The employment of unauthorized aliens by any contractor is considered a violation of Section 274A(e) of the Immigration and Nationality Act. If the contractor knowingly employs unauthorized aliens, such violation shall be cause for unilateral cancellation of the contract. In addition, pursuant to State of Florida Executive Order No. 11-116, Contractor shall utilize the U.S. Department of Homeland Security's E-Verify system to verify the employment of all new employees hired by the Contractor during the contract term. Also, Contractor shall include in related subcontracts a requirement that subcontractors performing work or providing services pursuant to the Contract utilize the E-Verify system to verify employment of all new employees hired by the subcontractor during the contract term.

XXXIII. Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – Lower Tier Covered Transactions

A. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency.

B. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal. The Department may cancel this contract if an attached explanation is not acceptable to the Department or the Federal government.

XXXIV MyFloridaMarketPlace

A. MyFloridaMarketplace Vendor Registration
Each Vendor doing business with the State of Florida for the sale of commodities or contractual services as defined in section 287.012, Florida Statutes, shall register in MyFloridaMarketPlace, in compliance with Rule 60A-1.030, Florida Administrative Code, unless exempt under Rule 60A-1.030(3) Florida Administrative Code.

B. MyFloridaMarketplace Transaction Fee
The State of Florida, through the Department of Management Services, has instituted MyFloridaMarketPlace, a statewide eProcurement system. Pursuant to section 287.057(23), Florida Statutes (2010), all payments for commodities and/or contractual services as defined in Section 287.012, Florida Statutes, shall be assessed a Transaction Fee of one percent (1.0%), which the Vendor shall pay to the State, unless exempt under Rule 60A-1.032, Florida Administrative Code. Notwithstanding the provisions of Rule 60A-1.030, et seq., the assessment of a transaction fee shall be contingent upon Federal approval of the transaction fee assessment program and continued payment of applicable federal matching funds.

For payments within the State accounting system (FLAIR or its successor), the Transaction Fee shall, when possible, be automatically deducted from payments to the Vendor. If automatic deduction is not possible, the Vendor shall pay the Transaction Fee pursuant to Rule 60A-1.031(2), Florida Administrative Code. By submission of these reports and corresponding payments, Vendor certifies their correctness. All such reports and payments shall be subject to audit by the State or its designee.

The Vendor shall receive a credit for any Transaction Fee paid by the Vendor for the purchase of any item(s) if such item(s) are returned to the Vendor through no fault, act, or omission of the Vendor. Notwithstanding the foregoing, a Transaction Fee is non-refundable when an item is rejected or returned, or declined, due to the Vendor's failure to perform or comply with specifications or requirements of the agreement.

Failure to comply with these requirements shall constitute grounds for declaring the Vendor in default and recovering reprocurement costs from the Vendor in addition to all outstanding fees. VENDORS DELINQUENT IN PAYING TRANSACTION FEES MAY BE EXCLUDED FROM CONDUCTING FUTURE BUSINESS WITH THE STATE.

STATE OF FLORIDA DEPARTMENT OF EDUCATION

MINORITY SUBCONTRACTORS UTILIZATION SUMMARY

CONTRACT #14-652 - ATTACHMENT E

The Department's Supplier Diversity initiative strives to ensure the promise of Florida's future is shared by all of its residents, regardless of race, ethnicity, disability, neighborhood or background. To that end, the Department is dedicated to support, track and increase its small, minority-, women-, and service-disabled veteran business enterprise spending with prime contractors and subcontractors. This form was developed to assist in these efforts.

The Prime Contractor shall report all small, minority-, women-, and service-disabled veteran business enterprise Subcontractors, identifying the Name, Address, Type of Certification and Dollar Amount on the form below. The Prime Contractor shall submit this form with each invoice submitted for payment, whether or not funds have been spent with a small, minority-, women-, and service-disabled veteran business enterprise Subcontractor for the period covered by the invoice. The Office of Supplier Diversity, Florida Department of Management Services will assist in furnishing names of qualified minorities. The Office of Supplier Diversity can be reached at (850/487-0915); the Internet Web address is http://dms.myflorida.com/other_programs/office_of_supplier_diversity_osd .

STATE OF FLORIDA
DEPARTMENT OF EDUCATION
INVITATION TO NEGOTIATE

FLORIDA STANDARDS ASSESSMENTS

BID NUMBER: ITN 2014-47

SECTION 1 - OVERVIEW

SECTION 1 –INSTRUCTIONS

1.0 GENERAL INSTRUCTIONS TO RESPONDENT

This section contains instructions explaining the solicitation process and the actions necessary to respond. General Instructions to Respondent (Form PUR 1001 – incorporated herein by reference) is a downloadable document which must be downloaded for review. This document need not be returned with the Respondent's Reply. Form PUR 1001 may be accessed at http://dms.myflorida.com/business_operations/state_purchasing under "Documents, Forms, References and Resources".

In the event of any conflict between Form PUR 1001 and other instructions provided in this document, the additional instructions in this document shall take precedence over the Form PUR 1001 unless the conflicting term is required by any section of the Florida Statutes (F.S.), in which case the statutory requirements shall take precedence.

It is entirely the respondent's responsibility to examine this ITN, to confirm that the Department's requirements are clearly stated, and to submit its reply in a timely, complete, and procedurally correct manner. The products and services described in this ITN will be procured in accordance with Chapter 287, Florida Statutes (F.S.), and Chapter 60A-1, Florida Administrative Code (FAC).

THE DEPARTMENT HAS CHOSEN TO USE THE ITN FORMAT FOR THIS PROCUREMENT BECAUSE IT WANTS VENDORS TO PROPOSE THE BEST METHOD FOR ACHIEVING THE GOAL OF THIS ITN AND SOLVING THE PROBLEM STATED HEREIN. THEREFORE, ALTHOUGH THE ITN MAY USE MANDATORY WORDS LIKE "SHALL," "WILL," OR "MUST," AND MAY DEFINE CERTAIN ITEMS AS REQUIREMENTS, THE DEPARTMENT RESERVES THE RIGHT, IN ITS DISCRETION, TO WAIVE ANY DEVIATIONS FROM THESE PROVISIONS AND RESOLVE ANY ISSUES IN THE NEGOTIATION PHASE. THEREFORE, THE DEPARTMENT RESERVES THE RIGHT TO REVIEW THE ENTIRE REPLY TO DETERMINE IF IT ACHIEVES A LEVEL OF COMPETENCY WORTHY OF FURTHER NEGOTIATIONS; REGARDLESS OF WHETHER INDIVIDUAL REQUIREMENTS HAVE BEEN ADDRESSED OR NOT. HOWEVER, VENDORS THAT FAIL TO PROVIDE SIGNIFICANT PORTIONS OF THE SOLUTION OR ADDRESS SIGNIFICANT PORTIONS OF THE PROCUREMENT MAY STILL BE DEEMED NONRESPONSIVE. IN ADDITION, THERE IS NO GUARANTEE THAT SUCH DEVIATIONS WILL BE DEEMED IN THE STATE'S BEST INTEREST OR ANY REPLY CONTAINING THOSE DEVIATIONS PARTICIPATE IN THE NEGOTIATIONS. USE OF THE TERMS "SHALL," "WILL," AND "MUST" INDICATE THE DEPARTMENT'S INITIAL VIEW OF THE VALUE OF SUCH ITEMS. VENDORS HAVE THE OPPORTUNITY TO SUGGEST ALTERNATIVES IN THE ITN PROCESS, BUT THERE IS NO GUARANTEE THAT THE DEPARTMENT WILL AGREE THE DEVIATIONS ARE IN ITS BEST INTEREST OR CREATE THE BEST VALUE FOR THE STATE.

SECTION 2 – CONTRACT CONDITIONS

2.0 GENERAL CONTRACT CONDITIONS

Standard terms and conditions that will apply to the contract which results from the solicitation event are provided in this section. General Contract Conditions (Form PUR 1000 – incorporated herein by reference) is a downloadable document which must be downloaded for review. This document need not be returned with the Respondent's Reply. Form PUR 1000 may be accessed at http://dms.myflorida.com/business_operations/state_purchasing under "Documents, Forms, References and Resources".

In the event of any conflict between the PUR 1000 form and any other Special Conditions, the Special Conditions shall take precedence over the PUR 1000 form unless the conflicting term in the PUR form is required by any section of the F.S., in which case the statutory requirements shall take precedence.

SECTION 3 - INTRODUCTION

3.0 INTENT

The State of Florida Department of Education (hereinafter referred to as the "Department") is soliciting written replies from qualified vendors to establish a term contract of which the term is anticipated to begin upon execution of the contract and be effective for 36) months thereafter. Award(s) will be made to the responsible and responsive vendor that the Department determines will provide the best value to the state.

The resulting contract(s) may be renewed for up to three additional 12 month terms, see Form PUR 1000 for renewal requirements.

Although this ITN may result in the award of multiple contracts, the term "Contractor" is used throughout this ITN and refers to each contractor providing the required products and services for each grade and subject for which the respective contract is awarded.

3.1 PURPOSE

The purpose of this Invitation to Negotiate (ITN) is to solicit replies for activities related to the implementation of computer-based and paper-based statewide summative assessments aligned to the Florida Standards for administrations beginning in spring 2015 and continuing through 2016-17 for the base contract with three one-year optional renewals for the administrations in 2017-18, 2018-19, and 2019-20. Henceforth, in this document, this test shall be called the FSA (Florida Standards Assessment)

In accordance with Governor Rick Scott's Executive Order, dated September 23, 2013, this ITN is seeking Replies that:

A. Provides timely and informative reports of results;

B. Includes costs that are in line with current assessment costs;

C. Ensures that testing time for students is not significantly different from current assessments;

D. Provides for summative assessments to occur as close as possible to the end of the school year;

E. Measures student mastery of the standards taught, including comparability to other states;

F. Includes test quality metrics that are as rigorous as current assessments;

G. Provides results that can be used in conjunction with Florida's school accountability system;

H. Requires technology parameters that are defined and can be supported, including appropriate accommodations for exceptional students.

This ITN addresses four broad assessment components as described below. Respondents may submit bids on any individual assessment component (A, B, C or D), any group of assessment components, or to provide all assessment components (A, B, C and D):

A. Computer-based and paper-based assessments in English Language Arts/ Literacy in Grades 3-8

B. Computer-based and paper-based assessments in Mathematics in Grades 3-8

C. Computer-based and paper-based assessments in English Language Arts/ Literacy in Grades 9-11

D. Computer-based and paper-based End–of-Course (EOC) assessments in Algebra 1, Geometry, and Algebra 2

A preferred schedule and plan for transition to computer-based testing is included in Appendix A. However, depending on the final award for the individual assessments, the Department may vary when tests will be administered as computer-based or paper-based. The final determination of which tests will be computer-based or paper-based is at the Department's discretion.

In addition, all Respondents agree, by submitting a reply, that any other state or school district in the United States may purchase the services provided in the resulting contract, upon the same terms and conditions, and price, as contained in the contract, or as permitted under the laws of that jurisdiction.

3.2 BACKGROUND

The Florida Comprehensive Assessment Test® 2.0 (FCAT 2.0) and Florida End-of-Course (EOC) Assessments implement the requirements of Section 1008.22, Florida Statutes (F.S.), requiring assessments of the academic achievement of Florida's public school students. The FCAT 2.0/EOC Assessment program is composed of state-developed criterion-referenced assessments. FCAT 2.0 Reading and Mathematics have been administered each spring since 2011 to assess students in selected grade levels. FCAT 2.0 Science was introduced in spring 2012, FCAT 2.0 Writing was introduced in spring 2013, and the Florida EOC Assessments have been phased in beginning in 2011. Prior to FCAT 2.0, FCAT assessments were administered each spring since 1998, and included Reading, Mathematics, Writing, and Science. The final administration of FCAT 2.0 Writing, FCAT 2.0 Reading, and FCAT 2.0 Mathematics will be in spring 2014. The final administration of the FCAT 2.0 Reading Retake for students with this graduation requirement will be in spring 2016, and the Florida Algebra 1 and Geometry EOC Assessments will be eliminated after the summer 2017 administration. (Administration of the FCAT 2.0 Reading Retake and the Florida EOC Assessments will be handled in another procurement.)

The *Sunshine State Standards*, which specify challenging expectations for the educational achievement of Florida students, were revised and approved by the State Board of Education as the *Next Generation Sunshine State Standards* (NGSSS). The Reading/Language Arts and Mathematics revised standards were approved by the State Board in 2007. Science and Social Studies Standards were approved in February 2008. The NGSSS and associated course descriptions for the Florida End-of-Course Assessments are available at www.flstandards.org. In 2010, Florida adopted the Common Core State Standards for English Language Arts/Literacy and for Mathematics. As of the release of this ITN, these standards were scheduled to be reviewed further by Florida's stakeholders. The degree to which the standards, and by extension the assessments, will be adjusted is to be determined. Florida plans for the Florida Standards Assessments to be operational beginning in 2014-15.

3.3 DEFINITIONS

After the award, said Respondent will be referred to as the "Contractor". For the purpose of this document, the term "Respondent" means a potential Contractor acting on its own behalf and on behalf of those individuals, partnerships, firms, or corporations comprising the Respondent's team. The term "Reply" means the complete response of the Respondent to the ITN, including properly completed forms and supporting documentation. The term "contract" refers to the agreement between the Department and the Contractor

resulting from this ITN. "Best value" means the highest overall value to the state based on objective factors that include, but are not limited to, price, quality, design, and workmanship. A "responsive bid" is a Reply submitted by a responsive and responsible vendor which conforms in all material respects to the solicitation. However, for purposes of determining what is material, please refer to Section 1 of this ITN. Use of the terms "shall," "will," and "must," or the designation of items as "requirements," does not mandate that such items are material. The Department reserves the right to waive deviations, in its discretion, and resolve any issues in the negotiation phase. "Deliverable" means a tangible, specific, quantifiable and measurable event or item that must be produced to complete a project or part of a project directly related to the scope of services.

Additional definitions/terms as follows:

a. AL – Achievement Level
b. Braille – Paper-based accommodation provided for eligible students with disabilities
c. CBT – Computer-based test; computer-based testing
d. Cohort – For the purposes of this ITN, refers to a group of students that enters grade 9 and is enrolled at the high school for a total of four years
e. District Assessment Coordinator – Primary contact(s) in each school district with whom FDOE communicates regarding the administration of K-12 statewide assessments and who oversees the administration of statewide assessments at all participating schools in that district
f. DAR – District Aggregated Results files used for reporting purposes
g. DIF – Differential Item Functioning
h. DSR – District Student Results file used for reporting purposes
i. DSS – Developmental Scale Score
j. EOC- End-of-Course – Refers to an assessment that is associated with a specific course
k. FDOE (DOE) – Florida Department of Education
l. FPO – Placeholder for a graphic used in a publication
m. FSA – Florida Standards Assessment, the current name of the assessments to be administered as part of this ITN
n. IEP – Individual Educational Plan for students with disabilities (ESE)
o. IRT – Item Response Theory
p. Large Print – Paper-based or computer-based accommodation provided for eligible students with disabilities; large print usually refers to at least 18 point font
q. MS (Manuscript) – The initial production round when a document is composed and first reviewed
r. MSID (Master School Identification File) – A file maintained by the Department and available online used to identify all active schools that will participate in statewide assessment administrations
s. One-Item-Per-Page – Paper-based accommodation provided for eligible students with disabilities; only one item appears on each printed page
t. P&D – Packaging and distribution; often used in reference to the specifications that describe a contractor's processes of packaging and distributing all statewide assessment materials prior to each assessment administration
u. PBT – Paper-based test; paper-based testing
v. PreID (Preidentification) – Process for identifying students prior to an administration to print labels with all of the student's information (PreID labels) or to create computer-based student records that will be used for testing
w. PT (Program team) – Contractor staff members with program-wide expertise who are expected to assist in developing accurate instructions and providing specific information related to the contractor's processes and procedures regarding Florida's statewide assessments

x. Rangefinding – Process required for scoring purposes by which student responses to performance tasks are used to illustrate score points on a rubric

y. RD – Results Delivery (RD1, RD2, etc.)

z. SAR – State Aggregated Results files used for reporting purposes

aa. School Assessment Coordinator – A designated school-level assessment contact who oversees administration of statewide assessments at that school, training of test administrators and proctors, and preparing and returning test materials

bb. Seals – Method of maintaining security of test content until a test session begins; paper-based tests may have one or more paper or plastic seals that students can easily break without tearing the test book, and computer-based tests may have an electronic means of sealing a test session (e.g., content is locked until a specific code is entered that allows access)

cc. Section 504 Plan – Plan detailing accommodations for students with temporary disabilities (may not be ESE)

dd. Section 508 Compliant (ADA Compliant) – Section 508 requires that electronic and information technologies which are procured or developed, be maintained by federal agencies and be accessible to people with disabilities, unless it poses an undue burden to do so. Accessibility standards needed to comply with this law were developed by the United States Architectural and Transportation Barriers Compliance Board. Section 508 of the Rehabilitation Act of 1973 is in the federal code of regulations *(29 U.S.C. § 794(d)*.

ee. SES (Scaling, Equating, and Scoring) – The set of processes used to ensure that assessment results are valid, reliable, and accurate

ff. SS – Scale score

gg. SSR – State Student Results files used to check data for reporting purposes

hh. STMs – Sample Test Materials

ii. Test Administrator – A certified educator who administers statewide assessments to students in a testing room; responsible for reading administration scripts to students and maintaining a secure testing environment

jj. TAC (Technical Advisory Committee) – A panel of experts who review and respond to proposed modifications and processes for the assessment program

kk. TAM – Test administration manual

ll. TC (Technology Coordinator) – A designated coordinator at the school or district level responsible for preparing for computer-based testing and addressing technical issues during testing

mm. TDC – Test Development Center, which is overseen by the FDOE and staffed with editors and Florida educators; TDC provides quality assurance for all test content and related products, whether customized or derived from existing products

nn. TM – Test Materials Shipment (TM1, TM2, etc)

3.4 CRITICAL EVENT DATES

These are tentative dates for critical events, and are subject to change.

- October 25, 2013 – ITN Released
- November 8, 2013 @ 2:00 PM, ET - Deadline for Technical Questions
- November 15, 2013 - Department Response to Technical Questions received by deadline
- December 12, 2013 @ 2:00 PM, ET - Technical & Price Replies are due

- December 12, 2013 @ 2:30 PM - Technical Replies will be opened in Room 332 Turlington Building (Step 1)
- January 10, 2014 - The Department will evaluate the Technical Replies in Room 1706 Turlington Building @ 9:00 AM (Step 2)

Price Replies will be evaluated by the Bureau of Contracts, Grants and Procurement Management Services staff during the evaluation stage.

- January 28, 2014 - The Negotiation Committee will start negotiations on or about (Step 4)
- February 13, 2014 BAFO's due on or about
- February 25, 2014 – ITA Meeting on or about

The Intent to Award will be posted for 72 hours upon completion of the negotiation meeting and a final decision by the Department.

SECTION 4 – SPECIAL INSTRUCTIONS

4.0 PRE-SOLICITATION CONFERENCE:

A Pre-Solicitation Conference **will not** be held.

4.1 SITE INSPECTION:

A Site Inspection **will not** be held.

4.2 VISITOR'S PASS TO THE TURLINGTON BUILDING

Each visitor to the Turlington Building is required to sign in and obtain a Visitor's Pass at the security desk in the main lobby. Please allow at least 15 minutes prior to Reply due time if hand-delivering the Reply to the Bureau of Contracts, Grants and Procurement Management Services.

4.3 REPLY QUESTIONS & ANSWERS

Any technical questions arising from this ITN must be forwarded, in writing, to the purchasing agent identified below. The Department's written response to written inquiries submitted timely by Respondents will be posted on the Florida Vendor Bid System (VBS) at www.myflorida.com (click on Business, then click on Doing Business with the state, under Everything for Vendors and Customers, click on the Vendor Bid System, then Search Advertisement; select the Department of Education in the Agency drop down window and initiate search), under this Reply number. It is the responsibility of all potential Respondents to monitor this site for any changing information prior to submitting a Reply.

Only timely received written inquiries will be "officially" addressed by the Department.

WRITTEN QUESTIONS should be submitted to:

Bureau of Contracts, Grants and Procurement Management Services, Fran Shewan, 325 West Gaines Street, 332 Turlington Building, Tallahassee, Florida 32399-0400, fshewan@fldoe.org (email preferred), or via Fax Number: (850) 245-0719. See **SECTION 3.4** Critical Event Dates for question due dates.

4.4 PROCUREMENT PROTESTS / NOTICE OF RIGHTS

Pursuant to F.S., Section 120.57(3) (b):

Any person who is adversely affected by the agency decision or intended decision shall file with the agency a notice of protest in writing within 72 hours after the posting of the notice of decision or intended decision. With respect to a protest of the terms, conditions, and specifications contained in a solicitation, including any

provisions governing the methods for ranking bids, proposals, or replies, awarding contracts, reserving rights of further negotiation, or modifying or amending any contract, the notice of protest shall be filed in writing within 72 hours after the posting of the solicitation. The formal written protest shall be filed within 10 days after the date the notice of protest is filed. Failure to file a notice of protest or failure to file a formal written protest shall constitute a waiver of proceedings under this chapter. The formal written protest shall state with particularity the facts and law upon which the protest is based. Saturdays, Sundays, and state holidays shall be excluded in the computation of the 72-hour time periods provided by this paragraph.

Section 120.57(3) (a) provides:

Failure to file a protest within the time prescribed in Section 120.57(3), F.S. or failure to post the bond or other security required by law within the time allowed for filing a bond shall constitute a waiver of proceedings under Chapter 120, F.S."

Florida Administrative Code (F.A.C.) Rule 28-110.002(2) defines the term “decision or intended decision,” and includes the solicitation terms (and any addenda), the award of the contract, and a rejection of all bids.

At the time of filing the Formal Written Protest the protestor must also file a Protest Bond payable to the Department in an amount equal to one percent (1%) of the estimated contract amount. F.S., Section 287.042(2) (c) and F.A.C. Rule 28-110.005 contain further terms relating to the Protest Bond, including how to determine the estimated contract amount. In lieu of a Protest Bond, the Department will accept cashier’s checks, official bank checks or money orders. The bond shall be conditioned upon the payment of all costs and charges that are adjudged against the protestor in the administrative hearing in which the action is brought and in any subsequent appellate court proceeding.

The Notice of Protest, Formal Written Protest, and Protest Bond shall be filed with the issuing office as defined in **SECTION 4.3** above.

4.5 ORAL INSTRUCTIONS / CHANGES TO THE INVITATION TO NEGOTIATE (ADDENDA)

No negotiations, decisions, or actions will be initiated or executed by a Respondent as a result of any oral discussions with a state employee. Only those communications which are in writing from the Bureau of Contracts, Grants and Procurement Management Services, will be considered as a duly authorized expression on behalf of the Department until negotiation is awarded.

Notices of changes (addenda) will be posted on the VBS, under this Reply number. It is the responsibility of all potential Respondents to monitor this site for any changing information prior to submitting a Reply. All addenda should be acknowledged by the Respondent’s signature and subsequent submission of addenda with Reply when so stated in the addenda.

4.6 MODIFICATIONS, RESUBMITTAL AND WITHDRAWAL

Respondents may modify submitted replies at any time prior to the Reply due date. Requests for modification of a submitted Reply shall be in writing and should be signed by an authorized representative of the Respondent. Upon receipt and acceptance of such a request, the entire Reply will be returned to the Respondent and not considered unless resubmitted by the due date and time. Respondents may also send a change in a sealed envelope to be opened at the same time as the Reply. The ITN number, opening date and time should appear on the envelope of the modified Reply.

Unless specifically requested by the Department, any amendments, revisions, or alterations to Replies will not be accepted after the closing for the receipt of Replies.

4.7 RESTRICTIONS ON COMMUNICATIONS WITH DEPARTMENT STAFF

Respondents shall not communicate with any Department staff concerning this ITN except for the Department contact person identified in **SECTION 4.3 REPLY QUESTIONS & ANSWERS** of this ITN. Only those communications which are in writing from the Bureau of Contracts, Grants, and Procurement Management

Services shall be considered as a duly authorized response on behalf of the Department. For violation of this provision, the Department reserves the right to reject a Respondent's Reply.

Respondents to this solicitation or persons acting on their behalf may not contact, between the release of the solicitation and the end of the 72-hour period following the agency posting the notice of intended award, excluding Saturdays, Sundays, and state holidays, any employee or officer of the executive or legislative branch concerning any aspect of this solicitation, except in writing to the procurement officer or as provided in the solicitation documents. Violation of this provision may be grounds for rejecting a Reply.

4.8 CONFIDENTIAL, PROPRIETARY, OR TRADE SECRET MATERIAL

The Department takes its public records responsibilities as provided under Chapter 119, F.S., and Article I, Section 24 of the Florida Constitution, very seriously. **If Respondent considers any portion of the documents, data or records submitted in response to this solicitation to be confidential, trade secret or otherwise not subject to disclosure pursuant to Chapter 119, F.S., the Florida Constitution or other authority, Respondent must clearly mark and identify in its Reply those portions which are confidential, trade secret or otherwise exempt. Respondent must also simultaneously provide the Department with a separate redacted copy of its Reply.** This redacted copy shall contain the Department's solicitation name, number, and the name of the Respondent on the cover, and shall be clearly titled "Redacted Copy." **The Redacted Copy shall be provided to the Department at the same time Respondent submits its Reply to the solicitation and must only exclude or obliterate those exact portions which are claimed confidential, proprietary, or trade secret. The Respondent should also provide two (2) electronic copies (compact disc (CD), flash drive, etc.) of their Redacted Copy**.

Respondent shall be responsible for defending its determination that the redacted portions of its Reply are confidential, trade secret or otherwise not subject to disclosure. Further, Respondent shall protect, defend, and indemnify the Department for any and all claims arising from or relating to Respondents determination that the redacted portions of its Reply are confidential, proprietary, trade secret or otherwise not subject to disclosure.

If Respondent fails to submit a Redacted Copy with its Reply, the Department is authorized to produce the entire documents, data or records submitted by Respondent in answer to a public records request for these records.

4.9. POOR PERFORMANCE NOTICE

The Respondent should provide for both the Respondent and its employees, subcontractors, and subcontractor employees, copies of any and all documents regarding complaints filed, investigations made, warning letters or inspection reports issued, any notice of breach, notice of default, termination notice, suspension notice, or any disciplinary action initiated or taken under any contract or job performance within the past seven (7) years. For each instance listed, provide a narrative summary of the contract's purpose and scope of work, the Respondent's performance, including the concerns of the project owner, and any major adverse findings. In addition, provide the contract or job number, the name of the owner, the term of the contract, the name, address, and telephone number of the owner's contract manager. Please also include any relevant documentation evidencing the performance issues.

The Department reserves the right to seek further information on this matter from the Respondent or to make inquiries with the project owner. The information obtained from this review may be reflected in the Respondent's score or used to declare the Respondent not a responsible vendor.

4.10 WITHDRAWAL OF A REPLY

A Respondent may withdraw a Reply by written notice to the Department on or before the deadline specified for the receipt of Replies in **SECTION 3.4 CRITICAL EVENT DATES** of this ITN. Such written notice is to be

submitted to the Issuing Office at the address specified in **SECTION 4.3 REPLY QUESTIONS AND ANSWERS** of this ITN.

4.11 DISCLOSURE OF REPLY CONTENTS

All documentation produced as part of this solicitation shall become the exclusive property of the state and may not be removed by the Respondent or its agents. All Replies shall become the property of the state and shall not be returned to Respondent. The Department shall have the right to use any or all ideas or adaptations of the ideas presented in any Reply. Selection or rejection of a Reply shall not affect this right.

4.12 AWARD

As in the best interest of the State, the right is reserved to award based on **all or none, groups of services, or any combination** thereof, to a responsive, responsible Respondent. As in the best interest of the state, the right is reserved to reject any and/or all Replies or to waive any minor irregularity in replies received. In addition, the Department reserves the right, in its discretion, to correct deviations during the negotiation phase. Conditions which may cause rejection of Replies include, without limitation, evidence of collusion among Respondents, obvious lack of experience or expertise to perform the required work, failure to perform, or meet financial obligations on previous contracts.

SECTION 5 – SPECIAL CONDITIONS

5.0 AUTHORIZED TO DO BUSINESS IN THE STATE OF FLORIDA

Foreign corporations and foreign limited partnerships should be authorized to do business in the state of Florida. Domestic corporations should be active and in good standing in the State of Florida. Such authorization and status should be obtained by the Reply due date and time, but in any case, must be obtained prior to contract execution. For authorization, contact:

Florida Department of State
Tallahassee, Florida 32399
(850) 245-6053

5.1 LICENSED TO CONDUCT SERVICES IN THE STATE OF FLORIDA

If the services being provided require that individuals be licensed by the Florida Department of Business and Professional Regulation or any other state or federal agency, such licenses should be obtained by the Reply due date and time, but in any case, must be obtained prior contract execution. For state licensing, contact:

Florida Department of Business and Professional Regulation
Tallahassee, Florida 32399-0797
(850) 487-9501

5.2 OTHER CONDITIONS

Other conditions which may cause rejection of replies include, without limitation, evidence of collusion among Respondents, obvious lack of experience or expertise to perform the required work, failure to perform or meet financial obligations on previous contracts.

5.3 IDENTICAL EVALUATION OF REPLIES

Whenever two (2) or more replies which are equal with respect to price, quality, and service are received, the Department will determine the order of award using the criteria established in 60A-1.011, F.A.C. The "Drug-Free Workplace Program Certification" can be found as Attachment 2.

5.4 DISCLOSURE STATEMENT

The Disclosure Statement Form (Attachment 4) should be signed and submitted with the Reply.

5.5 SUB-CONTRACTING

This contract or any portion thereof shall not be sub-contracted except as permitted herein, with the prior written approval of the Department. No sub-contract shall, under any circumstances, relieve the Contractor of its liability and obligation under this contract; and despite any such sub-contracting the Department shall deal through the Contractor, which shall retain the legal responsibility for performing the Contractor obligations.

The Prime Contractor shall report all Minority Subcontractors, identifying the Name, Address, Type of Certification and Dollar Amount on the Utilization Summary form, attached as Attachment 5. A list of subcontractors shall be provided to the Department's contract manager upon execution of the Contract. The Prime Contractor shall submit the Utilization Summary form with each invoice submitted for payment. The form must be submitted with all invoices, regardless if funds have not been spent with a Minority Subcontractor for the period covered by the invoice. The Office of Supplier Diversity, Florida Department of Management Services, will assist in furnishing names of qualified minorities. The Office of Supplier Diversity can be reached at (850) 487-0915; the Internet Web address is http://dms.myflorida.com/other_programs/office_of_supplier_diversity_osd/.

5.6 CONTRACTUAL OBLIGATIONS

The Department's Contract Standard Terms and Conditions are incorporated in this ITN as Attachment 6 and will govern the relationship between the Department and the Contractor. A Reply submitted by the successful Respondent(s) shall be incorporated into the final contract(s). The terms and conditions of this ITN shall control notwithstanding any statement to the contrary by the Respondent, unless such terms and conditions are modified by the Department during the negotiation phase.

5.7 METHOD OF PAYMENT

Compensation and payment will be made in accordance with the terms and conditions of the contract.

5.8 CONVICTED VENDOR LIST

A company placed on the Convicted Vendor List may not submit a Reply or be awarded a contract to provide any goods or services pursuant to Rule 60A-1.006 F.A.C. The "Convicted Vendor List" is published at:

http://www.dms.myflorida.com/business_operations/state_purchasing/vendor_information/convicted_suspended_discriminatory_complaints_vendor_lists/convicted_vendor_list.

5.9 DIVERSITY IN CONTRACTING

The State of Florida is committed to supporting its diverse business industry and population through ensuring participation by minority-, women-, and service-disabled veteran business enterprises in the economic life of the state. The state of Florida Mentor Protégé Program connects minority-, women-, and service-disabled veteran business enterprises with private corporations for business development mentoring. We strongly encourage firms doing business with the State of Florida to consider this initiative. For more information on the Mentor Protégé Program, please contact the Office of Supplier Diversity at (850) 487-0915.

The State is dedicated to fostering the continued development and economic growth of small, minority-, women-, and service-disabled veteran business enterprises. Participation by a diverse group of Vendors doing business with the state is central to this effort. To this end, it is vital that small, minority-, women-, and service-disabled veteran business enterprises participate in the State's procurement process as both Contractors and sub- contractors in this solicitation. Small, minority-, women-, and service-disabled veteran business enterprises are strongly encouraged to contribute to this solicitation.

Information on Certified Minority Business Enterprises (CMBE) and Certified Service-Disabled Veteran Business Enterprises (CSDVBE) is available from the Office of Supplier Diversity at:

http://dms.myflorida.com/other_programs/office_of_supplier_diversity_osd/.

5.10 COSTS INCURRED IN RESPONDING

This ITN does not commit the Department or any other public agency to pay any costs incurred by the Respondent in the submission of a Reply or to make necessary studies or designs for the preparation thereof, nor to procure or contract for any articles or services.

5.11 SUBMISSION OF REPLIES BY SUBSIDIARIES OR AFFILIATES

A Respondent, its subsidiaries, affiliates, or related entities is limited to one (1) Reply. Submission of more than one (1) Reply per activity by a Respondent may cause the rejection of all Replies submitted by the Respondent. In the alternative, the Department my decide, in its sole discretion, which Reply to evaluate and consider. A subsidiary or affiliate of a prime Respondent may also be included as a subcontractor in another Respondent's Reply.

5.12 PROHIBITION OF GRATUITIES

By submission of a Reply, the Respondent certifies that no elected or appointed official or employee of the state of Florida has or will benefit financially or materially from this procurement. Any contract arising from this procurement may be terminated by the Department if it is determined that gratuities of any kind were either offered to or received by any of the aforementioned officials or employees from the Respondent or its agents or employees.

5.13 INDEPENDENT PRICE DETERMINATION

A Respondent shall not collude, consult, communicate, or agree with any other Respondent regarding this procurement as to any matter relating to the Respondent's Reply.

5.14 FINANCIAL CONSEQUENCES

The Contractor shall submit to the Department for payment the above deliverables and those proposed and accepted by the Department that are satisfactorily completed in accordance with the terms and conditions set forth in **SECTION 7.0 SCOPE OF SERVICES** and **SECTION XXXXX DELIVERABLES**. Payment shall be delayed for any deliverables that are not satisfactorily completed until all deficiencies are corrected and the services have been accepted by the Department. In addition, delays in providing completed deliverables will subject the Contractor to damages.

5.15 PERFORMANCE BOND

The Contractor shall supply to the Department a Performance Bond in the amount of ten percent (10%) of the amount of the annual award. The surety shall be in a form acceptable to the Florida Department of Education, such as a bond, cashier's check, certified check or money order. A Surety must be authorized to do business in the state of Florida. The Performance Bond shall be executed and furnished to the Department within ten (10) calendar days prior to the Contractor beginning work under the contract. The performance bond must state that it includes coverage of liquidated damages assessed against the contractor. A performance bond is not required from Florida State Universities.

Cap: For each calendar, contract or fiscal year which corresponds to the period of the performance bond specified, the cumulative total of liquidated damages for which the Contractor(s) may be liable shall not exceed, annually, ten percent (10%) of the total contract amount at the time of assessment of liquidated damages.

5.16 PARTICIPATION IN FUTURE STAGES OF THIS PROJECT

As stated in Chapter 287.057 F.S.

17(a)c A person who receives a contract that has not been procured pursuant to subsections (1) through (3) to perform a feasibility study of the potential implementation of a subsequent contract, who participates in the drafting of a solicitation or who develops a program for future implementation, is not eligible to contract with the agency for any other contracts dealing with that specific subject matter, and any firm in which such person has any interest is not eligible to receive such contract. However, this prohibition does not prevent a vendor who responds to a request for information from being eligible to contract with an agency.

5.17 ACCESSIBLE ELECTRONIC INFORMATION TECHNOLOGY

Respondents submitting Replies to this solicitation must provide electronic and information technology resources in complete compliance with the accessibility standards required by Section 282.601-282.606, F.S., and Rule 60-8.002, F.A.C. These standards establish a minimum level of accessibility.

5.18 SCRUTINIZED COMPANIES LISTS (as applicable)

Section 287.135, Florida Statutes, requires that at the time a company submits a bid or proposal for a contract for goods or services of $1 million or more, the company must certify that the company is not on either the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Petroleum Energy Sector List. Both lists are created pursuant to section 215.473, Florida Statutes.

Replies of $1 million or more should include the attached ***Scrutinized Companies Lists*** Form (Attachment 6) to certify the respondent is not on either of those lists. The Form should be submitted with the Technical Reply.

5.19 LIQUIDATED DAMAGES

Accurate and timely delivery is imperative and, as a result, the contract will include the following provisions for the completion of the Work Tasks/Activities and Interim Deliverables and Final Deliverables identified in this ITN.

The Contractor(s)'s failure to complete Work Tasks/Activities and Interim Deliverables and Final Deliverables both correctly and on time will result in substantial injury to the Department and the State of Florida, but the amount of damages resulting from such injury cannot be calculated with certainty. Each such failure to complete Work Tasks/Activities and Interim Deliverables and Final Deliverables both correctly and on time is hereinafter referred to as a default. Defaults shall be deemed corrected on the date that the Work Tasks/Activities and Interim Deliverables and Final Deliverables have been correctly completed. For each default, the Contractor(s) shall be liable to the Department for liquidated damages and not as a penalty, as set forth below:

a. Tasks/Activities and Interim Deliverables: For each default on performance and completion of Work Tasks/Activities and Interim Deliverables (see SECTION 7.8), it is agreed that for each and every day work remains uncompleted beyond the time set for its completion the Contractor(s) shall be liable to the Department in a specified amount of three thousand dollars ($5,000.00) per business day as liquidated damages for such delay, and not as a penalty, from the date of notice by the Department until the default has been corrected.

THE REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

b. Final Deliverables: For each default on completion of Final Deliverables (see SECTION 7.8), the Contractor(s) shall be liable to the Department in a specified amount per calendar day from the date of notice by the Department until the default has been corrected. The specified amount of damages is defined below:

Schedule of Liquidated Damages For Final Deliverables	
Number of business days elapsed after the default	**Liquidated Damages**
First	$5,000.00
Second	$15,000.00
Third	$30,000.00
Fourth	$45,000.00
Fifth	$60,000.00
Sixth	$75,000.00
Seventh/ subsequent days	$125,000.00 per day

c. Cap: For each calendar, contract, or fiscal year which corresponds to the period of the performance bond specified in ITN Section 5.15, the cumulative total of liquidated damages for which the contractor may be liable shall not exceed, annually, ten percent (10%) of the total contract amount at the time of assessment of liquidated damages.

d. Collection: At its option, the Department shall collect liquidated damages by making claims against the performance bond, from time to time, until the bond has been exhausted or by deducting the liquidated damages from contract payments to the contractor. In the alternative, the Contractor may make payment to the Department in the amount of such liquidated damages.

e. Deadline Adjustments:

(1) In the event the contractor wishes to propose a change of deadline for a Critical Work Task, the contractor may propose the change to the Department, in writing. The Department has no obligation to agree to the change, but shall notify the contractor, in writing, as to whether or not it agrees to the proposed change. If the Department agrees, the modified deadline shall become the effective deadline for purposes of assessing liquidated damages.

(2) In the event the Department wishes to change a deadline for an Extremely Critical Work Task to a date which shortens the contractor's time for meeting the deadline, it shall notify the contractor of the new deadline in writing in the form of a contract amendment. If the contractor determines that by exercise of every reasonable effort, the contractor will be unable to meet the new deadline, the contractor shall offer a proposed shortened deadline which the contractor can meet by the exercise of every reasonable effort.

(3) In the alternative, the contractor may propose a contract amendment in which the additional personnel hours needed to achieve the shortened deadline are compensated by a price adjustment.

(4) If the parties are unable to reach agreement, the Department shall determine the deadline. However, the issue of whether liquidated damages apply to the contractor's failure to meet the shortened deadline shall be reached as follows. The parties shall submit to binding arbitration the issue of what date (earlier than the original deadline) the contractor could have completed the Extremely Critical Work Task on time and correctly by exercising every reasonable effort. The date determined through arbitration shall be the deadline for purposes of assessing liquidated damages. Arbitration shall be conducted pursuant to the procedures of the American Arbitration Association, subject to the Florida Arbitration Code, Chapter 682, F.S.

f. Waiver: The Department, in its sole discretion, may waive the imposition of liquidated damages or a portion thereof in a given instance. Such waiver, in any instance, shall not constitute a waiver in any future instance, nor establish any right on behalf of the contractor to a waiver.

g. Department Approval: In situations where in the contractor must obtain the Department's approval of an activity or product before the contractor can complete a Critical Work Task, the contractor shall be responsible for providing a reasonable time for the Department to complete its review and for the contractor to correct any deficiencies. In the event the Department's review is not conducted within a reasonable time, as described in Section 7.7.4, that shall be grounds for the contractor to propose a deadline adjustment pursuant to Subsection 5.19(e)(1), above. The parties' contract managers may agree, in writing, in advance, as to the reasonable time for the Department's review of a specific activity or product.

SECTION 6 – SPECIAL INSTRUCTIONS – REPLY FORMAT & CONTENT

6.0 REPLY SUBMISSION

Both Technical and Price Replies will be received as specified in **SECTION 3.4 CRITICAL EVENT DATES.**

All Replies and associated forms should be signed and dated in ink by a duly authorized representative of the Respondent. The overall Reply should be written in a concise manner, which is conducive to effective evaluation and selection.

All Replies and related documents submitted in response to this ITN shall become the property of the state.

6.1 MAIL OR DELIVER REPLIES TO: (Do Not Fax or E-Mail)

Florida Department of Education
Bureau of Contracts, Grants and Procurement Management Services
Attn: Fran Shewan
325 West Gaines Street
332 Turlington Building
Tallahassee, Florida 32399-0400

6.2 REPLY FORMAT INSTRUCTIONS

This section contains instructions that describe the expected format for the Reply. All Replies submitted should contain two parts and be marked as follows:

PART I TECHNICAL REPLY NUMBER ITN 2014-47
(One Separately Sealed Package for Technical)

PART II PRICE REPLY NUMBER ITN 2014-47
(One Separately Sealed Package for Prices)

THE SEPARATELY SEALED PACKAGES MAY BE MAILED TOGETHER IN ONE ENVELOPE OR BOX.

6.2.1 Preliminary Administrative Review

The absence of any of these documents may result in a determination that the Reply is non-responsive and the Reply shall not be evaluated. The Reply forms furnished must be used when submitting the Reply. Forms are to be filled out in ink or typewritten. **Administrative Review information shall be included in the Technical Reply portion (Part I) of the Reply and consist of the following:**

- **All Addenda**
- **DUNS Number**

- **Disclosure Statement Form** (Attachment 3)
- **Reference Form** (Attachment 4) – Provide at least three (3) references, which demonstrate efforts comparable to the one described in this ITN. The Department reserves the right to contact the references regarding the services provided. Any information provided will be subject to the requirements of the Florida Public Records Law.
- **Transmittal Letter** – Provide a Transmittal Letter (on Company Letterhead) that contains the following:
  - a statement confirming that the person signing the Reply is authorized to represent the Respondent and bind the Respondent relative to all matters contained in the Respondent's Reply
  - the company's federal tax identification number
  - the company's DUNS number
  - a statement confirming that the Respondent has read, understands, comply and agrees to all provisions of this ITN, unless changed during the negotiation process. By submitting a Reply, the Respondent agrees to the terms and conditions of the ITN notwithstanding any statement in the Reply to the contrary. However, the Department will attempt to resolve any disagreements in the negotiation sessions.
  - a statement confirming that the Respondent is authorized to conduct business in Florida in accordance with the provisions of Chapter 607, F.S. In lieu of such statement, the Respondent alternatively should confirm that authorization to do business in Florida will be secured prior to the award of the contract.
  - a statement confirming that the Respondent is registered on the MyFloridaMarketPlace website in accordance with the provisions by the State of Florida. In lieu of such statement, the Respondent should alternatively confirm that registration authorization will be completed prior to the award of the contract.
  - a statement confirming that the Respondent has electronically registered a valid W-9 with the Department of Financial Services (DFS). DFS is ready to assist any vendors with questions, and vendors must submit their W-9 forms electronically at https://flvendor.myfloridacfo.com. Contact the DFS Customer Service Desk at (850) 413-5519 or FLW9@myfloridacfo.com with any questions. In lieu of such statement, the Respondent should alternatively confirm that registration will be completed prior to the award of the contract.

6.2.2 Technical Reply (Part I) (20 hard copies)

(Do not include price information in Part I)

The Respondent should submit **one (1) original in hard copy, nineteen (19) hard copies and twenty (20) in electronic format (compact disc (CD), flash drive, etc.) copies in Microsoft Word 5.0 or higher, or Adobe Acrobat** of the Reply which is to be divided into the sections described below. The Department expects all Replies to be in this format. Failure of the Respondent to follow this outline may result in the rejection of the Reply, or result in a lower evaluation score. Any rejection of a Reply, or other adverse affect on a Respondent's Reply, due to its failure to properly organize its Reply shall be at the sole risk of the Respondent. The Technical Reply should be submitted in a separate sealed package marked **"TECHNICAL REPLY FOR ITN 2014-47"**.

1. **EXECUTIVE SUMMARY**

   The Executive Summary should be written in non-technical language to summarize the Respondent's overall capabilities and approaches for accomplishing the services specified herein. Evidence should include, but not be limited to, respondent's mission, date of founding, size, and experience. This section should also demonstrate the Respondent's clear understanding of the Department's goal to securely and reliably develop, administer, score, and report Florida's assessments in an efficient and cost-effective manner. The Executive Summary should be limited to no more than six (6) pages.

2. QUALIFICATIONS AND EXPERIENCE

The respondent should provide a description of qualifications and prior experience performing tasks similar to those required in this ITN. The discussion should include a description of the respondent's background and relevant experience that qualifies it to provide the products and services required by this ITN.

The respondent should document the contracted services for previous assessment projects similar to the one described in this ITN and any other projects the respondent believes will document its corporate capability. For each, the documentation should include a description of the services and products delivered; the contract period; and the name, address, and telephone number of a contact person for each of the contracting agencies.

If subcontractors are to be used for any portion of the work activities, the respondent should name the subcontractor(s) and document the experience and qualifications of the subcontractor(s) in performing tasks identical or similar to those they will be asked to do. A separate chart in the proposal may be used to identify all of the subcontractors proposed to be involved in the project and the services they are expected to provide. The respondent also should provide examples of materials that demonstrate the quality of the work done by the respondent on similar projects.

The proposal should include information sufficiently descriptive to permit the proposal evaluation committee to consider the experience and capability of the prime contractor as well as the subcontractors.

As part of the proposal evaluation, the proposal evaluation committee will contact one or more of the agencies for whom the respondent previously had been engaged to obtain information and recommendations. Committee members may also depend upon and use their own personal knowledge of the respondent, the subcontractors, and the proposed personnel as they evaluate each proposal.

3. TECHNICAL PLAN

The technical plan should provide a description of the respondent's proposal to meet the requirements of this ITN. This discussion should encompass all of the requirements of Section 7.1.0 through Section 7.6.3.6.3 and associated deliverables of this ITN and should be organized and numbered in accordance with the organization and numbering system used in Sections Section 7.1.0 through Section 7.6.3.6.3. The technical plan should describe the methodologies, quality management standards and best practices that will be employed in managing and completing the requirements. The descriptions should be thorough, clear, yet as concise as possible. The Respondent should also identify where significant difficulties may be anticipated and describe any specific techniques proposed to be used to resolve the difficulties.

TECHNICAL APPROACH

The Respondent should explain the approach, capabilities, and means to be used in accomplishing the tasks in the Scope of Services, and where significant development difficulties may be anticipated and resolved. Any specific techniques to be used should also be addressed.

TECHNICAL APPROACH ORGANIZATION OF THE INVITATION TO NEGOTIATE

Section 7.1 of the ITN states the purpose of the ITN; describes the current Florida statewide assessment program and modifications to the program that will be implemented under the ITN; and provides information for preparing replies.

Sections 7.2 through 7.7 describe the scope of work for the years covered by this ITN. References are made in Sections 7.2 through 7.7 to the appendices, which provide detailed information about printed products, reports, shipments, and other elements of Florida's assessment program. Each section includes a description of products and services to be provided.

Section 7.2.0: Program Descriptions. An overview of the standards-based assessments requiring services described in this ITN.

Section 7.3.0: Test Development. A description of the test development tasks from item writing through the production of final test forms.

Section 7.4.0: Test Administration. A description of the test administration tasks, including the delivery and return of test materials, the production of test administration ancillary materials, providing customer service and technical support, needs for the online management system, and administering computer-based assessments.

Section 7.5.0: Scanning, Scoring, and Reporting. A description of the scanning, scoring, and reporting tasks from preparing school and student information through the reporting of results. The psychometric aspects of scoring are covered in Section 7.6.0.

Section 7.6.0: Scaling, Equating, Scoring, and Special Psychometric Studies. A description of the scaling, equating, scoring, and special psychometric studies and tasks.

Section 7.7.0: Program Management. A description of how the work of the contract should be managed, including meetings, staff, and reimbursable funding categories.

SYSTEM DEMONSTRATION (ELECTRONIC DEMONSTRATION)

The Respondent should submit two (2) copies with the Technical Reply, **in electronic format** (compact disc (CD), DVD, flash drive, etc.) **a demonstration (demo) of the proposed system. The system demo provided should not exceed 25 slides or 30 minutes of presentation.**

Do not include pricing information with the Technical Reply or the demo. Any inclusion of prices/discounts in the Technical Reply or demo may be grounds for deeming the Respondent's Reply nonresponsive.

After the Evaluation Phase is completed, the Department will notify the Respondents invited to participate in Negotiations. Only those Respondents entering into Negotiations will be allowed and required to present an **on-site** oral presentation of the proposed operational system. The Respondent's on-site presentation will be conducted during the Negotiation meeting. The actual date, time and duration of Negotiation meetings/presentations are to be determined.

4. RESPONDENT'S MANAGEMENT PLAN

The management plan should describe the organization and document its capacity to provide the products and services required by this ITN. This discussion should specifically encompass the requirements of Section 7.7.0 through Section 7.7.10 and associated deliverables of this ITN and should be organized and numbered in accordance with the organization and numbering system used in Section 7.7.0 through Section 7.7.10. The descriptions should be complete, clear, and concise.

The management plan should identify by name the managers and professional personnel responsible for this project. Charts showing the organizational structure and the incorporation of proposed project staff into the structure should be included, as well as the amount of time in FTE person-days that each person will devote to the major tasks and activities.

The Respondent should include a description of the methodology to be used to manage the project work, including control of costs, assuring quality, identifying and minimizing risk, and maintaining schedules;

Vitae should be included as an appendix to the proposal and should include relevant educational background and professional experience. Personnel assigned by the contractor should demonstrate qualifications and competencies of the position to which assigned.

It is assumed that the contractor may use outside printers for some materials, such as preprinted forms. Printers will be documented as subcontractors, and the management plan should identify the proportion of

materials to be printed by the contractor and by outside vendors. Procedures for quality control and security during printing should be described.

6.2.3 Price Reply (Part II) (20 hard copies)

The Respondent should submit **one (1) original hard copy, nineteen (19) hard copies and twenty (20) electronic format (compact disc (CD), flash drive, etc.) copies in Microsoft Excel 5.0 or higher.** The Respondent's price information should be submitted on the form provided in this ITN. Prices submitted in the Price Reply form, Attachment 1, will be used to evaluate the price component of the evaluation. Payment for services provided under the contract will be made based on the deliverable schedule submitted, Section 7.8, The Price Reply and deliverable schedule should be submitted together in a separate sealed package marked **"PRICE REPLY FOR ITN 2014-47"**.

6.2.4 Presenting the Reply

The Reply should be limited to a page size of eight and one-half by eleven inches (8½" x 11"). Type size should not be less than a 12 point font. The Reply shall contain a table of contents, be typed single-spaced and have separate parts, each clearly labeled including page numbers. The information to be addressed in each part is described in the above sections. The absence of information or the organization of information in a manner inconsistent with the terms of this ITN may result in the rejection of the Reply, or a reduced evaluation score. Bindings and covers will be at the Respondent's discretion; however, **elaborate notebooks/hard back binders are discouraged**.

Unnecessarily elaborate special brochures, art work, expensive paper and expensive visual and other presentation aids are neither necessary nor desired.

All Respondent materials should be packaged so that each box of materials shipped to the Department does not exceed 25 pounds.

SECTION 7 – SCOPE OF SERVICES

7.0 SCOPE OF SERVICES

7.1.0 Introduction

This ITN addresses four broad assessment components as described below. Respondents may submit bids on any individual assessment component (A, B, C or D), any group of assessment components, or to provide all assessment components (A, B, C and D):

A. Computer-based and paper-based assessments in English Language Arts/ Literacy in Grades 3-8

B. Computer-based and paper-based assessments in Mathematics in Grades 3-8

C. Computer-based and paper-based assessments in English Language Arts/ Literacy in Grades 9-11

D. Computer-based and paper-based End–of-Course (EOC) assessments in Algebra 1, Geometry, and Algebra 2

The Department will continue to phase in computer-based assessments in Grades 3-8, transitioning completely to computer-based by 2017-2018 according to the preferred schedule in Appendix A. However, depending on the final award for the individual assessments, the Department may vary when tests will be administered as computer-based or paper-based. The final determination of which tests will be computer-based or paper-based is at the Department's discretion.

This ITN will specify a complete package of products and services so that the FSA will be developed, administered, scored, and reported separately from other assessments aligned to Florida's Next Generation Sunshine State Standards under a contract currently held by NCS Pearson. This ITN does not include the

Science, Social Studies, FCAT 2.0 Reading Retake, and Florida EOC Assessments aligned to the Next Generation Sunshine State Standards that will be covered in a separate procurement.

Although this ITN may result in the award of multiple contracts, the term "Contractor" is used throughout and refers to each contractor providing the required products and services for each grade and subject for which the contract is awarded.

7.1.1 Notice to Respondents

1. This ITN provides for implementation of Florida's standards-based assessment program. The contract will include development, psychometric services, administration, scoring, and reporting of Florida Standards Assessments in English Language Arts/Literacy and Mathematics for the test administration cycles for 2014-2015 through 2016-17 with possible extension of services in three one-year renewal periods, 2017-18 through 2019-2020. Replies will be evaluated on the basis of the respondent's qualifications and experience and the technical and cost replies for the tasks described herein for the entire span of the ensuing contract.

2. This ITN defines the requirements for implementing Florida's standards-based assessment program. The ITN and the selected contractor's reply, together with clarifying documents, define the work to be conducted under contract. These documents will be incorporated into the contract resulting from the state standards-based assessment program project award. Because Florida's standards-based assessment program is technical and complex, it is possible that a responsive reply may not totally or clearly reflect ITN requirements in all details. If the reply of a respondent selected as a result of the bidding process is inconsistent with the ITN, the requirements of the ITN will prevail; the selected contractor will be expected to perform all ITN requirements without an increase in cost above the proposed cost. Furthermore, by submitting a bid the respondent is agreeing to be bound by the terms of the ITN notwithstanding any language in the reply to the contrary. Any discrepancies between the terms of the ITN and the reply will be resolved in the negotiation process at the Department's discretion, and when it is in the state's best interest.

3. The Department reserves the right to substitute or modify tasks on a generally equal basis. Substitutions or modifications will be made prior to the selected contractor's beginning significant efforts to complete the task. All design changes, substitutions, or modifications will be given to the contractor in writing. It is not the intent of this provision to increase the scope of work of the contract but to protect the Department as design changes to improve the assessment become known during the implementation of development and administration activities. The Department also reserves the right to amend the contract resulting from this bid competition to add, modify, or delete designated tasks, products, and/or services related to the core activities of this project.

4. In developing the solution pursuant to this procurement, a respondent may propose to provide a custom built solution, a solution comprised of pre-existing, proprietary materials or products that are the intellectual property of the respondent or third parties, or a combination thereof. A respondent may propose that all intellectual property developed be owned solely by the Department, owned jointly by the Department and the respondent, or, at a minimum, that the Department be granted a perpetual and non-exclusive license for the use, reproduction and modification of the solution for use in Florida. The Department reserves the right to request alternative intellectual property arrangements or combinations of such arrangements during negotiations with respondents, in order to obtain a reply that provides the best value to the state. All permissions or licenses required for the use of materials or products that are the intellectual property of a third party must be obtained by the respondent. All materials, products, and licenses must be transferred to the Department at the end of the contract period such that the Department can maintain and sustain the solution beyond the end of the contract period.

5. The selected contractor will work closely with the Department and with groups of Florida educators to complete all tasks. All procedures, processes, and products used by the contractor to complete contract work must be approved by the Department. Throughout the contract period, the contractor will confer with

the Department on a continuing and consistent basis and will be involved in frequent face-to-face meetings with the Department, as necessary.

6. Several reimbursable funding categories identified in Section 7.7.9 are set aside for specific functions during the course of the project. Expenditures in these categories will be reconciled on a quarterly basis.

7. The dates for reporting assessment results necessitate a restricted time period to complete the work of scoring activities. Respondents are expected to propose efficient and innovative procedures to meet these required reporting dates and are expected to demonstrate in their replies that they have the capability and are willing to commit the human and technological resources needed to complete the scanning, student response file processing, scoring, and reporting tasks in the required time period.

8. The fundamental purpose of Florida's standards-based assessment program is to provide accurate information on student achievement. The contractor will utilize every means required to ensure that information created by the project is accurate. The selected contractor will be responsible for correcting at the contractor's expense any errors arising from activities that are the responsibility of the contractor. This may involve activities such as conducting analyses to identify the cause and extent of errors; reprogramming or reproducing products or other materials; replacing data files; reproducing reports; and shipping replacement products or reports to the Department or districts using expedited shipping services.

9. **News releases or public announcements pertaining to this ITN, a contract award resulting from the ITN, or work completed under a contract will not be made without prior written approval from the Department.**

7.1.2 Project Schedule

The deliverables schedule presents a list of major project activities and the dates for completion where these can be determined. Many of the deliverable dates are contingent upon finalized administration dates and will be determined during the negotiation process. Appendix B indicates critical and extremely critical tasks and provides general guidelines for the timeframes for completion, but these are also contingent on finalized administration dates. The dates provided in 7.2.2 are subject to change during the negotiation phase.

Respondents should provide a detailed schedule that incorporates the activities included in this ITN for the entire life of the contract. The schedule will indicate essential steps for the completion of project tasks, initiation and completion dates, and task responsibility. Tasks and responsibilities will include an explanation of work effort required and full-time equivalent staff (FTE) committed to this work. **The reply should also provide total annual FTE and identify individuals and/or staff roles that will work full-time on this project. Respondents should be aware that the schedules for each project year overlap.** To accurately estimate required annual resources, schedules for preceding and succeeding years need to be considered.

Following the contract award, the schedule will be further developed into a working document that will be updated weekly, indicate all task completion dates, and be revised as needed with Department approval (See Section 7.7.6). A draft work schedule, based on a sample provided by the Department, will be prepared by the selected contractor for submission to the Department one week prior to the initial planning meeting, which will be held no later than one month after the execution of a contract for the project. The schedule will be submitted in hard copy and electronic format using Department-approved spreadsheet software that permits sorting of the file by start or end date and major task and subtask groupings.

7.2.0 Program Descriptions

The selected contractor will provide the Department with a criterion-referenced achievement test, aligned to and measuring mastery of the Florida Standards in English Language Arts/Literacy (ELA/L) and Mathematics proficiency for administration to Florida public school students. For purposes of responses to this ITN, the Florida Standards are to be considered those adopted by the Florida State Board of Education in July, 2010. Any changes to the standards following additional Florida public review scheduled for fall 2013, and resulting changes to the assessment will be addressed through the amendment of the contract that may be awarded as a result of this ITN.

The primary purpose of the assessment is to provide student academic achievement and learning gains data to students, parents, teachers, school administrators, and school district staff. This data is to be used by districts to improve instruction; by students, parents, and teachers to guide learning objectives; by education researchers to assess data; and by the public to assess the cost benefit of the expenditure of taxpayer dollars. The assessment must be designed to:

1. Assess the achievement level and annual learning gains of each student in ELA/L and Mathematics.
2. Provide data for making decisions regarding school accountability, recognition, and improvement of operations and management, including schools operating for the purpose of providing educational services to youth in Department of Juvenile Justice programs.
3. Identify the educational strengths and needs of students and the readiness of students to be promoted to the next grade level, to graduate from high school, and to succeed in college and in careers.
4. Assess how well educational goals and curricular standards are met at the school, district, and state level, and at the national level, to the extent possible.

7.2.1 Expected number of districts, schools, and students

The expected number of students, shipping destinations, and schools are provided in Appendix C as a basis for preparing replies. Respondents should calculate the quantities of materials needed to implement the test administrations on the basis of these estimates. If the total number of tests administered across all grades and test administrations exceeds the number of tests described in this appendix by more than ten percent (10%), the Department will execute a formal change to the contractual agreement.

Appendix C also lists the 67 school districts and approximately 13 special districts. For the school districts and the special districts combined, the contractor will ship testing materials to approximately 80 separate destinations. In the 67 school districts and the special districts combined, approximately 4,000 separate administration sites (including private schools, community colleges, etc.) will be involved in the test administrations, and the contractor will expect that number to increase by as much as five percent (5%) annually, calculated based on the previous year. Some of this increase is due to legislative changes that increase the number of students participating in Florida's statewide assessment program. If the increase of administration sites is beyond the anticipated five percent (5%), the incremental cost increase will be handled in an amendment to the contract.

7.2.2 Potential Test Administration Dates

Potential projected starting dates for future assessment administrations relevant to this ITN are shown in Table 7.2.2 below for illustrative purposes only. The respondent's reply should propose starting dates for spring administrations that occur as late in the school year as possible. Replies should take into account the scoring of constructed- and extended-response items, data verification activities, and reports of results by the required dates (Appendix B).

THE REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

The FSA EOC Assessment administrations will be at the same time as the Florida EOC Assessment administrations. These dates are also provided, for reference, in Appendix A.

Table 7.2.2 EXAMPLE: Potential Test Administration Dates for Florida's Standard-Based Assessments

Table 7.2.2 EXAMPLE: Potential Test Administration Dates for Florida's Standard-Based Assessments			
Year	**Grades 3-11 ELA/L Grades 3-8 Mathematics**	**Grade 10 ELA/L Retake**	**Algebra 1 EOC Geometry EOC Algebra 2 EOC**
2014-15	March 2-13, 2015	N/A	April 7-25, 2015 July 13-24, 2015
2015-16	February 29-March 11, 2016	October 12-23, 2015 February 29-March 11, 2016	September 14-25, 2015 November 30-December 18, 2015 April 4-22, 2016 July 11-22, 2016
2016-17	March 6-17, 2017	October 10-21, 2016 March 6-17, 2017	September 12-23, 2016 November 30-December 21, 2016 April 3-21, 2017 July 10-21, 2017

[1] Optional Renewal Period			

7.3.0 Test Design and Development

All services related to test design, item development and review, item banking, and test production for the FSA are the responsibility of the contractor selected under this ITN. Respondents may propose a customized assessment, or products and services derived from existing products developed and published by the contractor, or developed as part of other initiatives. It is understood that by the time the contract is executed for the services requested in this ITN, test items may have already been developed for assessments that will be operational in 2014-2015. However, the Department expects to be closely involved in the development and review of new test items to be field tested and developed in subsequent years. To the extent possible, the Department also expects to be involved in any test construction activities for 2015 assessments still to be completed after contract execution. The Department's primary goal with respect to test design is ensuring that the assessment measures student mastery of the Florida Standards, and accomplishes this in the most cost-effective way without significantly increasing testing time beyond that of current Florida assessments. A sample test design is provided in Appendix D.

The Department has established a Test Development Center (TDC), staffed with editors and Florida educators, to provide quality assurance for all test content and related products, whether customized or derived from existing products. The selected contractor will work closely with the Department and TDC staff to ensure that the test philosophy, design, item specifications, and product quality are aligned with Florida's expectations. The Department and TDC will also coordinate closely with the selected contractor to conduct

rangefinding meetings with educators in order to generate training materials for the scoring of performance tasks. While the selected contractor will be required to coordinate all meeting activities and materials, the Department and TDC will identify invitees and assist in facilitating all meetings. Required meetings are referenced throughout the ITN. See Section 7.7.7 for a summary of details about educator/citizen meetings. Test development procedures should include review and revision of proposed test and item specifications, review of test blueprints, review and evaluation of items available for use on the test (item development plan), field testing for needed items to complete the desired test design, and final operational test creation. All phases of test development shall use accepted validity, reliability and other testing principles including Universal Test Design. A plan for complete data review of field-tested items should be delineated. The Department must approve the items and the test forms before they become operational. Respondents who propose solutions derived from existing products that are used by other states must take into consideration the requirement for including state educators in the quality control aspect of item development and scoring of performance tasks. The extent of educator involvement will be discussed during negotiations and agreed upon prior to contract execution.

To the greatest extent possible, the Department is seeking a solution that provides comparability of results with other states. Such comparability could be obtained by a number of acceptable means. The assessment could be one that is also administered in other states, or the design could include embedding of a small number of norm-referenced items within each criterion-referenced test form. A design that uses embedded norm-referenced items would not be expected to yield student-level comparative data, rather in this case, the Department would expect reporting at an aggregate level. The final design will be discussed during negotiations and agreed upon prior to contract execution.

7.3.1 Test Content

1. The FSA will consist solely of test items as described in the previous section. If an existing "shelf product" test includes additional components beyond those described above, it will be necessary to remove these items.
2. If the test being proposed is to be derived from an existing product, respondents should:
    a. Describe the general content being measured by the proposed test.
    b. Provide full-length inspection copies of the test and test administration manual for each grade level.
    c. Provide a test blueprint that governs construction of the test, including the number of items per objective and reporting category.
    d. Describe the objectives being measured by the test.
    e. Describe the taxonomic classification system used to classify each test item and the proportional assignment of items within the taxonomic classification system.
    f. Describe the range of content difficulty included on each level of the test including the extent to which the items at each level assess content that may be difficult for some students.
    g. Describe the method by which text complexity and grade-level appropriateness was determined for reading passages
    h. Describe how grade-level appropriateness of item content for each level of the test was determined
    i. Describe the extent to which the items included at each level assess higher order thinking skills. If the taxonomic classification system (See e. above) includes a thinking skills dimension, please include this information in that description.
    j. Describe the manner in which the test is configured into subparts for both test administration and score reporting purposes, including how reporting categories are related to the taxonomic classification system.

k. Provide an indication of the minutes of testing time required for the separate content sections.

3. The respondent should describe the special materials or manipulatives required or permitted for correct administration of the proposed test (e.g., online rulers or Department-approved calculators). Detailed descriptions of or access to each required item should be provided with the technical reply.

4. Reading passages should expose students to grade-level text of appropriate complexity. Texts should reflect a balance of authentic literature (stories, drama, and poetry) and informational text/literary nonfiction, which would include passages that address the literacy standards requirement for history/ social studies, science, and technical subjects that students are expected to read. Selections should include a combination of single texts and paired passages of sufficient complexity for close, analytical reading which would allow students to discern and locate evidence from the text to support assertions in multiple-choice items or writing responses. Respondents may propose passages from three sources, including public domain, permissioned, and commissioned sources. Solely for cost comparison purposes, respondents may assume a test design that includes 1/3 of each passage type, but respondents may propose solutions that best meet the primary requirements of the ITN. The final test design will determine the proportion and genre percentages for passages.

5. English Language Arts/Literacy items aligning to each passage may include multiple-choice items as well as short, constructed responses to text-dependent questions. One extended response item should be drawn from a paired or multiple-text passage set. Extended writing prompts should allow students to produce opinions/arguments, informative/explanatory responses, and narratives.

6. The first tests to be administered by the selected contractor under this ITN will be the spring 2015 ELA/L and Mathematics tests in Grades 3 – high school.

   a. The selected contractor will be required to provide stand-alone computer-based calculator applications for 4-function, scientific, or graphing calculator use on computer-based tests, depending on final test design. These computer-based calculator applications will be made available to districts and schools for downloading to local computers and for online access and practice throughout the year.

   b. For any Florida test produced for students, the selected contractor will provide braille, large-print, regular-print, and one-item-per-page versions at each grade level for students with disabilities. The contractor must also provide computer-based accommodations for students with various disabilities, as described in Section 7.3.11.2. A demonstration of these accommodations may be included in the respondent's presentation.

   c. The selected contractor will also print and ship Braille and large print sample test materials upon district request for students who will require these paper-based accommodations. These sample test materials are considered "generic," meaning once they are created by the contractor, there is no expectation that they will be updated during the life of this contract.

7.3.2 Test Configuration

This section provides information on the configuration for all test documents and related materials for both print and computer test delivery.

7.3.2.1 Test and Answer Document Design

Respondents should describe the proposed document design and layout for each grade and subject test, for computer-based and paper-based tests, as described for each year in Appendix A. The selected contractor designs and produces camera-ready art for the test forms that are used to print test books and answer books or prepare computer-based test items in delivery-ready format. Contractors are expected to provide the necessary human and other resources necessary to meet extremely critical deadlines for delivery of documents and the computer-based test system and files.

Respondents have been requested to submit bids for a paper-based and computer-based format for each assessment. However, even if a computer-based assessment is the accepted solution, any tests offered on the computer must also be prepared for use in a paper-based format (Braille, large print, regular print, one-item-per-page) as noted in these tables. In this instance, the paper-based format will only be offered by special request for up to five percent (5%) of the students and can be used at the Department's discretion.

To the extent that a respondent's design solution allows for some customization, the Department will consider replies that include:

1. Security-controlled booklets containing only FSA Reading passages and no test items for the computer-based tests to be available by special request for up to five percent (5%) of the students. See Section 7.3.11.1.
2. Blank work folders for all students taking the FSA Mathematics computer-based tests. The work folder consists of four pages for students to do scratch work, the fourth page containing a full-page grid.
3. Blank worksheets for all students taking the FSA ELA/L computer-based tests. The worksheet consists of two pages for students to make notes.
4. A copy of the appropriate reference sheet, if proposed by the respondent and accepted by the Department, may also be provided for students taking the assessment for which it is proposed.
5. Work folders, worksheets, and reference sheets/periodic tables are not numbered or inventoried by the contractor; they are destroyed by the school after results arrive.

For respondents who do not offer such customization, replies should address how test design and presentation eliminate the need for these considerations.

The Department may choose to modify the design of any state-specific test documents/files prior to any test administration, and reserves the right to change this configuration beyond the specifications but within the scope of the contract, if necessary, through change orders or contract amendments. Appendix E provides additional details concerning these materials.

7.3.3 Develop Items

For items developed after contract execution, it is the responsibility of the selected contractor to ensure that the quantity of items developed and submitted for review annually is sufficient to create operational test forms for each administration. Respondents should propose item and passage counts by item type, standard or cluster, as appropriate, needed to be developed annually in order to meet these needs. The contractor must identify and recruit a sufficient number of highly-qualified writers for passages and items to ensure variety and quality of development. Resumes for these writers should be provided and approved by the Department prior to contract execution. Note that no active Florida educators will be approved as item writers.

The contractor must conduct in-depth training of passage/item writers at least annually. Department content experts will attend the passage/item writer training to provide input and oversight for the process.

The selected contractor will be responsible for internal reviews to ensure item clarity, content accuracy, adherence to Test Item Specifications, psychometric properties, difficulty, readability requirements, and potential bias or insensitivity. It is unacceptable to submit to the Department proposed test items at any time that contain blatant errors, such as violation of Test Item Specifications, spelling errors, or grammar mistakes. The Department will not review any submissions with these types of obvious errors even if the impact creates schedule challenges for the contractor, for which the contractor will be responsible.

7.3.4 Review Meetings

For test items developed for use on assessments following the spring 2015 administration, the selected contractor will be responsible for organizing and convening meetings for the purpose of reviewing assessment

items for content and bias and community sensitivity issues by Department-appointed review committees composed of Florida educators and other citizens. A detailed list of meetings to be conducted under this contract and the funding mechanism for these meetings are provided in Sections 7.7.7 and 7.7.9 of the ITN. For each meeting, the selected contractor will be required to maintain original forms of all committee member test security and non-disclosure agreements. These will be made available to the Department on an as-needed basis.

The meetings will be held in a Florida location that is easily accessible (hub cities) to the majority of participants and capable of handling the logistical requirements of a large-scale, multi-committee meeting.

The selected contractor will prepare assessment items and all other materials required to conduct the meetings. Separate content review meetings will be conducted for each subject/grade combination.

If more than one contract is awarded as a result of this ITN, the Department will coordinate with the contractors to determine the most efficient method of planning and conducting the review meetings. The respondent may propose recommended solutions in the event of the award of multiple contracts.

7.3.4.1 Bias and Sensitivity Committee Reviews

The selected contractor is responsible for coordinating all logistics and for preparing materials for the bias and community sensitivity review committees. The committees are normally composed of representatives of Florida citizens and educators from various backgrounds who review each newly developed test item. The primary purpose of each committee is to consider whether the subject matter and language used is free of potential bias and acceptable to Florida students, parents, and other community members.

Respondents should propose methods for conducting these reviews.

7.3.4.2 Item Content Review Committees

For the subject/grade combination content review meetings, each item should be projected on a screen and changes should be made to items onscreen throughout the review process. The selected contractor will be responsible for supplying the computers, projection devices, and other hardware and software needed to project and modify items onscreen. The contractor will also provide calculators, reference materials such as Test Item Specifications, textbooks relevant to the grade and subjects being reviewed, dictionaries, and thesauri for each room as is appropriate to the nature of the meeting. Print copies of the items being reviewed will be provided to each participant in security-controlled notebooks.

At the conclusion of each meeting, Department and contractor staff will review and evaluate changes and ideas recommended by each committee. The Department will have final approval of all changes to be made.

After these meetings, the selected contractor will conduct an editorial and content review of the items to ensure that changes have been applied correctly and that all editorial and content issues are corrected. This process is referred to as the “Cleans” review process. The Department will review and have final approval of all items.

The selected contractor’s development project manager, the development team, and necessary assistants will participate in the assessment item content review meetings to manage the meetings and to be responsible for organizing, distributing, secure material tracking, and data entry functions required for meetings. Arrangements will be required for collecting and keeping secure materials locked in secure storage when not in use and for copying materials during the meeting.

7.3.4.3 Data Review Committees

Once items have been field tested, the contractor is responsible for convening a meeting to review the statistical data on each item from field testing to identify any issues from a psychometric perspective. This Data Review Committee may include state content experts, grade-level teachers,

accessibility and accommodations experts, and psychometricians, as appropriate. The primary purpose is to ensure that all dichotomously-scored items and tasks behave as expected, include all correct and appropriate responses, and are fair for all students. This committee may review differential item functioning (DIF) statistics to ensure that an item did not unintentionally favor or disfavor a particular subgroup of students. Additional considerations include determining whether an item can be used as is or needs to be revised and, if so, whether it will be returned to the field test pool for further testing. The contractor will be responsible for applying any recommended edits to items and will submit the revised items for final Department approval.

7.3.4.4 Content Advisory Committees

Of particular importance for the design and development of Florida assessments are the Content Advisory committees. The members of the ELA/L and Mathematics Content Advisory committees advise the Department about the scope of the assessments for these areas. Their recommendations may include: standards to be assessed; the number of benchmarks, passages, and items to be addressed per grade level; the item types recommended for each assessed standard; and the content of the Test Item Specifications documents.

7.3.5 Develop Field-Test Item Sets and Forms

For designs using embedded field testing, it is the responsibility of the selected contractor to group the developed items into item sets that will be included in the operational forms of the test for each content area.

In making the decision as to which items will be field-tested, the selected contractor's field-test proposals must consider the areas of greatest need in the item bank, the range of content and rigor included in the items, and the number of items available to be field tested.

7.3.6 Develop Stand-Alone ELA/L Field-Test Item Sets and Forms

Depending on the measurement model for the proposed ELA/L assessment, the Department will consider a stand-alone field test for ELA/L extended constructed-response tasks. Respondents who propose a stand-alone field test should prepare field test sampling specifications detailing the sampling methodology. The Department prefers that such a field test, if proposed, take place in the December time frame of each year of administration. A field test administration is not listed in other sections of this ITN (schedules, test administration manuals, etc.); however, if it is determined during negotiations that a stand-alone field test will take place, all test administration and scoring schedules and deliverables will be agreed upon prior to contract execution.

7.3.7 Constructing Test Forms

This section describes the requirements for constructing test forms, including the creation and maintenance of test construction specifications. The test construction process must be supported by sophisticated computer software, preferably a component of the item banking system that will generate test statistics and related curves. The construction of operational forms must be completed in time to meet the requirements of this ITN for delivery of test materials to districts.

7.3.7.1 Test Construction Specifications

The specific processes, guidelines, requirements, and schedule to be followed in constructing all forms of the assessments are to be provided to the Department as detailed, expert-developed, and referenced specifications. The test construction specifications must also include information about the criteria for item selection, content representativeness, design of the assessment, evaluation criteria for reviewing statistical characteristics of items, and desirable assessment characteristics. A section of the specifications must address considerations and requirements for those assessments that are pre-equated, if applicable, as well as a section for unique requirements of constructing computer-based assessments. Careful and extensive development of the creation of linking or anchor item sets must be included with details about statistical and content requirements for selecting sets of items and criteria for annual refreshing/replacement of portions of the anchor item set. Additionally, the specifications must include necessary **information** regarding item context/position

based upon previous use. The selected contractor must also retain assessment construction records during the lifetime of the contract. These records must include assessment summaries (item IDs and item/assessment statistics) of the various versions of proposed assessments and reasons for decisions made regarding each version, and Department approval documentation for the final version of each assessment.

7.3.7.2 Test Construction System

The contractor will provide a computer-based test construction system that interfaces with the item banking system to select and sequence items, generate test curves, and provide statistical summary tables and test curves upon demand. The system proposed by the respondent should be fully described in the reply including technical specifications, screen shots and access to a demonstration version of the system.

7.3.7.3 Construct the English Language Arts/Literacy, and Algebra 1, Algebra 2, and Geometry Retake Forms

Grade 10 English Language Arts/Literacy and Algebra 1, Algebra 2, and Geometry retake tests will be administered under this contract beginning in fall 2015. Respondents should propose pre-equated retake forms that can be scored for reporting on accelerated timelines. Solutions for retakes that do not include performance tasks will be considered, even if performance tasks are included in the operational forms. Overall test characteristics must mirror those of the operational assessments; however, the Department will discuss the design of the retakes during negotiation and a decision will be finalized prior to contract execution.

7.3.7.4 Prepare Camera-Ready or Screen-Ready Test Forms

For each grade or subject test, the selected contractor is responsible for preparing camera-ready documents or screen-ready files after the test items have been selected, composed in forms per grade/subject, and reviewed. Preparing test documents for publication includes developing test book configurations, test maps, specifying page layouts, proofing composed PDFs, and completing digital proofs in conjunction with the Department and external reviewers, as appropriate to the selected contractor's proposed solution.

7.3.7.5 Interpretive Products

The selected contractor will develop interpretive products (IP) to interpret or describe test items for specific subject areas or to explain test results. The contractor will be expected to propose sample items, review publication PDF and digital rounds, provide alternate text for ADA-compliant files, create or refine annotations for student responses, and ensure coherence and consistency with the operational test. Interpretive products follow the production and review guidelines outlined in Section 7.3.10. Required products include the following:

Understanding Florida's Assessment Reports

This publication describes the various reports of test results distributed to students, schools, and districts. An explanation and an image of each type of report are provided. The booklet also includes information about the test content areas and a glossary of technical terms. The contractor will deliver the electronic ADA-compliant PDF for posting to the DOE website so files can be posted to coincide with the first results delivery (RD1).

Sample Test Materials (STMs)

STMs will be delivered for all assessments, including assessments that are primarily computer-based, and include 10-20 developed sample items in a sample test booklet for students with a separate answer key booklet for teachers. Both documents are produced in ADA-compliant PDF files for unsecure web posting and in large print and Braille accommodated versions. The printed accommodations are delivered to schools each fall so students can practice answering various item types. The ADA-compliant version is delivered at the same time so all students have the same opportunity for practice. Respondents should propose designs for sample test books and answer

keys for the ADA-compliant PDF version and for printed large print and Braille accommodated versions.

English Language Arts/Literacy and Mathematics Scoring Guides
The contractor will be expected to post electronic publications that provide information to help educators understand the scoring of constructed-response items included on student reports. These publications provide information about the test design, standards and benchmarks, item types, and how items are scored. They also provide scoring rubrics and the annotated papers used to train scorers for the constructed-response items. Each sample item from the scoring papers is displayed as it appeared on the test and responses for each score point, images of student responses, and annotations explaining why the response received a particular score are provided.

Computer-Based Test (CBT) Practice Tests
Respondents should specify a plan for delivering computer-based practice tests for all computer-based assessments, including accommodated computer-based assessments to be reviewed and revised as needed in conjunction with Department and external reviewers. The purpose for these practice tests is to familiarize students with the computer-based testing system and to provide students with an opportunity to practice answering various item types.

All practice tests will include items similar to test format and content. The practice session may combine subject items or use separate practice sessions for each subject area as the Department will determine. Practice sessions will include approximately six (6) to twenty (20) items per subject.

Review and development of the student tutorials/practice sessions must follow the Department's procedures for forms review, outlined in Section 7.3. In addition, the Department reserves the right to request updates to the practice sessions to reflect any changes in CBT platform functionality or necessary changes to the practice questions throughout the life of the contract. The contractor must anticipate that these updates may occur and must be prepared to provide these updates at no additional cost. (These would not qualify as "author's alterations" defined in Section 7.7.9.3.)

Additional information about the computer-based format and practice tests is provided in Table 7.4.9.6.

Test Item Specifications
Respondents should propose a detailed plan for producing and reviewing test item specifications for ELA/L and Mathematics grades and subjects in consultation with the Department and Florida educators. The specifications govern the writing and review of passages, prompts, stimuli, and test items and generally identify the item/task requirements and constraints for measuring each standard. The publications may include introductory information and appendices as necessary to fully explain how the tests and items are developed. The test item specifications may include clarification of the standard being assessed, specific content and item limitations, and item formats by which each standard will be assessed. Sample items may be included for each item type. Item writers are the primary audience for these publications, but Florida educators also use these materials, so ADA-compliant PDF files will be posted to the Department website. These publications will not be distributed in print. Respondents may propose approximate document lengths and document design. In conjunction with the review of the test item specifications, an external review panel of Florida educators will review the test design and philosophy contained in each manuscript and will make recommendations for improvements to the item specifications for each assessment.

7.3.8 Production of Printed Test Materials

1. The selected contractor is responsible for producing all versions of the materials and products developed for this project, including test forms.
2. The selected contractor is responsible for proofreading documents during all stages of production. The contractor should propose well-defined procedures to ensure drafts are checked by computer for spelling and

proofed for complete accuracy by qualified proofreaders from the respondent's staff before they are sent to the Department for review. Qualified persons within the respondent's organization and independent editors, who will be responsible for proofreading, should be named in the reply and their resumes attached. The respondent should include a provision for the cost of changes made during the final proof stage of production as "author's alterations" to be authorized by the Department.

3. The selected contractor will design and implement a procedure for assessing the quality of printing. The procedure must include on-site quality control plans to ensure 100% correct printing, sealing, and collating test documents. In their replies, respondents should explain what arrangements they have reached with printers to establish technology or procedures to prevent miscollating test and answer books. Printing subcontractors that produce miscollated test and answer books may not be approved for subsequent test administrations. Procedures for ensuring printing quality must include plans for proofing all materials before and after printing. The selected contractor will be responsible for replacing misprinted or otherwise defective materials at the contractor's expense within a time period acceptable to the Department.
4. In addition to the quality of printing, the Department requires stringent test security procedures to be followed during all stages of document production and printing. In their replies, respondents should explain the security plan to be implemented while test documents are in production and at the printer. See Appendices F and I for these restrictions.
5. If errors occur during production, the selected contractor will be responsible for providing to the Department within 30 days of the event a root-cause analysis, providing details on the cause and steps for improvement.

7.3.9 Production of Computer-Delivered Products

1. The selected contractor is responsible for producing all versions of computer-delivered products developed for this project, including test forms. These products include all information, text, and graphics that will be presented to computer-based test users.
2. The Department recognizes that the development, review, and approval processes for computer presentation of information and materials parallels similar work for printed tests and products.
3. The respondent should specify its suggested plan for computer-based-test production with the objective of ensuring that industry-leading quality is attained. The plan for the test content review should include steps required to develop computer-based tests and practice tests to be reviewed and revised as needed prior to approval in conjunction with Department and external reviewers, as appropriate to the respondent's proposed solution.
4. The functionality of CBT forms (e.g., tools, reference sheets, navigation) must be checked carefully to ensure that errors have not been introduced, and that the functionality remains consistent across forms and administrations. The Department will provide a checklist that can be used as a starting point for the functionality review, but the selected contractor must be prepared to devote significant time to thoroughly check each form.
5. A final review round will include an "end-to-end" check of the product, including checks to ensure user access to the product and accurate navigation and functionality. The respondent should include a provision for the cost of changes made following approval of a computer-based-test form as "author's alterations" to be authorized by the Department (see Section 7.7.9.3).
6. Qualified persons within the respondent's organization and independent editors, who will be responsible for proofreading, should be named in the reply and their resumes attached.
7. The Department requires stringent test security procedures to be followed during all stages of document production and printing. In their replies, respondents should explain the security plan to be implemented while test documents are in production. See Appendix F for these restrictions.

8. If errors occur during production, the selected contractor will be responsible for providing a root-cause analysis to the Department within 30 days following the event, providing details on the cause and steps for improvement.

7.3.10 Production of Paper-Based and Computer-Based Test, Style Guide, and Braille Production Procedures

1. The selected contractor will be responsible for all aspects of production for the CBT system, secure web-based reporting site, and printed materials, including formatting, graphics, and key entry. For each publication, the contractor will submit product specifications that identify printing plans, type size and style, ink and paper color, paper quality, and layout. Printing examples that show type size and style will be included. The contractor will provide copies of the final electronic files for products.
2. The selected contractor will also print any additional materials needed to implement the project, such as transmittal memoranda, labels for packing and packing lists.
3. The selected contractor will be responsible for all aspects of production for publishing printed products, including formatting, graphics, and key entry. For each publication, the contractor will submit printing plans that identify type size and style, ink and paper color, paper quality, and layout. Printing examples that show type size and style will be included. The contractor will present these plans annually. The Department expects attractive, quality printed materials at reasonable cost. Guidelines for the quantities of each product to be printed are indicated in Appendix E.
4. Editorial specifications must include editorial and stylistic considerations for the development of test questions and the layout of test pages. The selected contractor is responsible for updating and revising the specifications annually as style and layout requirements may change. The contractor will work with the Department to identify the components of the specifications that need revision and will revise and print copies for all users.
5. The selected contractor will submit plans that identify screen layouts and navigation elements, font style and size requirements, background and foreground color palettes, and requirements for graphics. The contractor will identify and propose a branding plan to identify and provide consistency for Florida assessment components delivered via computer. The Department expects an attractive, high quality, engaging, and functional presentation. The contractor will present this information, as well as the proposed scheduling and process for review rounds, in a specifications document that addresses computer-based presentations.

7.3.11 Produce Special Formats and Accommodations for Students with Disabilities

7.3.11.1 Paper-Based Accommodations

For all assessments, the selected contractor will provide Braille and large print versions for visually impaired students. For all assessments, the selected contractor will also provide one-item-per-page/one-sided accommodated versions as unique accommodations. For test documents, the selected contractor will create the electronic files in the correct format needed to produce these special formats. Although multiple forms of the tests may be constructed for each administration, only one form for each test will be converted to Braille, large print, and one-item-per-page versions. Large print documents will be printed in a minimum of 18-point type on approved paper and bound using agreed upon methods. Reformatting of documents may be necessary to meet these specifications. The selected contractor is responsible for having Braille materials proofed by an independent party that includes a certified Braille reader. The Department may also employ the services of a Braille proofreader. See Appendices E and G for more details and specifications on special formats of test documents.

1. Respondents should include proposed subcontract publishers of Braille and large print materials in their response. This publisher will produce the accommodated versions of the test and answer books and other documents at the contractor's expense. Test administrator notes and

scripts to accompany each administration's Braille test versions will also be developed by the contractor.

2. While most blind students in Florida require contracted Braille, there will be some students who require uncontracted Braille. The selected contractor will be responsible for providing either format based on district requests. Approximately 50 copies of the Braille versions and up to 400 copies of the large print version may be required for each grade level and subject area per administration. Test administrator notes and scripts to accompany each administration's Braille test versions will be provided by the contractor as a supplement to the manual, and will undergo the same iterative review process as other printed materials.
3. If requested by districts, the selected contractor will also provide large print and/or Braille versions of sections of the test administration manuals. These publications will be produced so that they will be delivered to districts along with the shipment of the regular print versions of these products as identified in Appendix E. A maximum of five (5) each per format may be produced for each administration.
4. The selected contractor will maintain and update an internal document that identifies which person, by position and name that will perform each task in the Braille materials process. Each task must be described in detail and the document must be accessible online with other downloadable materials.
5. On request, the selected contractor will develop and deliver one-item-per-page documents to districts. Approximately 25 copies of the one-item-per-page version may be required for each grade level per administration. The need for these specialized documents will be determined by the Department through its unique accommodations requests process and the Department will provide an approved list identifying students needing this accommodation to the contractor.
6. The one-item-per-page documents will be packed and shipped by the selected contractor for identified students. These documents will be printed on 8 ½" x 11" paper, three-hole punched, and placed in a binder so that individual pages may be removed as necessary. Because these are also used for students who require true black and white print, the selected contractor will provide for the Department's approval a sample of the materials to be used that demonstrates the paper quality and font/style. The document package will include the appropriate scannable answer document for student responses and the contractor will include directions for administration and management of this test version. The contractor will be responsible for transcription of one-item-per-page student responses.
7. The respondent's reply should describe the processing of large print, Braille, and one-item-per-page versions of answer documents, including handling and transcription during the scoring process. All Braille, large print, and one-item-per-page materials require separate packaging but must be shipped so that they arrive in districts at the same time as the materials for regular students.
8. The contractor will also deliver paper-based regular print or large print Reading Passage Booklets for computer-based Reading tests. The booklets, which contain reading passages but do not contain test items, will be for use by eligible students who need to utilize handwritten strategies in order to respond to test items on the computer. See Section 7.3.2.1.

7.3.11.2 Computer-Based Accommodations

Florida's computer-based tests must also be available in paper-based format as an accommodation at all grades and subjects. The use of this format will be dictated by a student's IEP or Section 504 plan. The Department anticipates that the number of students taking a paper-based test (PBT) based upon allowable accommodations will not exceed five percent (5%) of the total population for each grade and subject tested on computer, and the selected contractor will produce this quantity five

percent (5%) of paper-based tests. For these students, paper-based accommodations described in Section 7.3.11.1 must be available.

The reply should address the capability of the computer-based system to provide the following special accommodations for students and to handle any additional requirements related to the use of these accommodations.

1. **Screen Reader**
   The respondent's reply should include a description of a screen reader for computer-based tests. The respondent should propose a method for reading text within the computer-based system that does not require additional, proprietary software installed on the user's computer. The screen reader should be able to read all text and/or text descriptions of graphics or pictures, including graphics or pictures used as answer options. The system should also have the capability to use modified text if necessary (e.g., reading an algebraic equation with grouping symbols), and allow user control of the reading speed and volume. The screen reader should be designed for use by both sighted and visually impaired students. The Department recognizes that the contractor may have different types of screen readers for these two purposes, but this difference should be transparent to the user. The Department must approve the usability and voice of the screen reader. In addition, the contractor must ensure that the pronunciation of the screen reader is accurate, consistent across forms and subject areas, and would be recognizable to students. If the screen reader does not have accurate, recognizable pronunciation, it must be modifiable to meet the Department's standards. In addition, the contractor must check the pronunciation on every form to ensure it is correct, is tracking properly, and is understandable prior to it being provided to the Department for review. The Department prefers that the contractor adhere to the Department's screen reader specifications to ensure consistent performance of the screen reader. However, the Department will review screen readers that meet the intent of this section and the needs of the Department.

2. **Increased Font Size (Large Print and Zoom)**
   The respondent's reply should describe available options on the CBT system to enlarge font size, graphics, and CBT interface (i.e., buttons, tools, cursor, scrollbar) for students with disabilities and describe how these options are set for a student. See Section 7.4.9.6 for large print and zoom size requirements.

3. **Font and Background Color (Color Contrast)**
   The respondent's reply should describe available options on the CBT system for changes to the font color and background color in order to optimize the ability of students with visual impairments to read the screen and describe how these options are set for a student. See Table 7.4.9.6 for the font/background color combinations.

4. **Assistive /Adaptive Devices**
   The respondent's reply should describe the ability of the CBT system to interface with assistive/adaptive devices. The reply should include a description of specific devices that may be used and known devices that are not supported, as well as any special requirements necessary for use, and should describe how options for use are set for a student.

5. **English-to-Heritage Language Translation Dictionary**
   The respondent's reply should describe the provision on the CBT system of an on-screen English-to-heritage language translation dictionary for English Language Learners, if this can be made available. The accommodated student should be able to select a word and be presented with a translation sensitive to the context of the text. The language translation dictionary should be available in Spanish and Haitian Creole. The respondent's reply should describe the high-level tasks involved, note the general timelines required, including the major/essential deliverables and services required.

6. **English-to-Sign Language Translation Dictionary**
   The respondent's reply may describe the provision on the CBT system of an on-screen English-to-sign language translation dictionary, if this can be made available. The accommodated student should be able to select a word and be presented with a translation sensitive to the context of the text. The respondent's reply should describe the high-level tasks involved, note the general timelines required, including the major/essential deliverables and services required.

7.4.0 Test Administration

The contractor is responsible for all aspects of test administration described in this section.

7.4.1 Pack and Distribute Materials

1. The contractor is responsible for all arrangements and costs associated with packing, distributing, and retrieving physical materials. There must be 100% accounting for all secure materials (e.g., test books, test and answer books) distributed to and returned by districts using barcode labeling systems, as well as for any physical media (e.g., CDs) used to transmit electronic files. The contractor must guarantee that distribution procedures are accurate and make corrections to the system in the event of errors. Respondents' replies should include descriptions of the procedures they will use to complete these tasks. Respondents should identify carriers they propose to use and the procedures for delivery and retrieval of test materials. The Department must approve all carriers.
2. The contractor will prepare packaging and distribution (P&D) specifications for each test administration. The contractor will use the information in the specifications to program packaging systems and train personnel involved in the processes. The packaging specifications will include the contractor's procedures for packing and distributing materials to districts and retrieving materials from districts. The specifications will include a description of how the materials are packaged, how quantities of materials will be calculated, examples of packing and inventory lists for boxes sent to districts and schools, methods used for distributing and retrieving materials, a description of the procedures used to inventory materials as they are returned, as well as any special instructions or administration-specific information. The contractor will also include samples of all memoranda required in the delivery/pickup process. For reference, the Department will provide the contractor with the most recent packaging and distribution specification document at the initial contract management meeting. Proof of Department approval for each specification document will be evidenced through email confirmation of approval.
3. The number of districts and special schools that serve as districts may change slightly during the life of the contract. Appendix C provides information about the number of districts, schools, and students that will receive test materials. Respondents should anticipate shipping materials to district assessment coordinators at approximately eighty (80) separate sites. Materials will be shipped to a central district location and distributed to the schools by the district.
4. Several school districts have contracts for services with school sites that are not geographically located within the school district itself. School district personnel supervise the sites and the district assessment coordinator provides training for site-based test administrators related to the administration, including security, packing, and shipping. To enable prompt receipt and return of test materials, the contractor may be required to ship materials directly to and retrieve materials directly from these remote sites. The Department will work with the district assessment coordinators and the contractor to identify and approve the remote sites to which the contractor will be permitted to ship and retrieve materials without going through the district office. For the purpose of preparing replies, respondents should expect that up to twenty-five (25) such locations might be identified.
5. At the beginning of the contract, the Department will provide the contractor with a data file containing a list of the districts and schools (names and identification numbers). The contractor will be responsible for maintaining this list, updating it, and providing a copy of the data file to the Department at the end of the contract or at other times within the contract period on request.

6. The contractor will collect preidentification information from districts for each administration via the online management system and assume that preidentification will be used for 100% of the school population. These files will be used to load student data into computer-based testing systems, as well as produce barcode PreID labels and rosters for paper-based tests. The contractor will establish a system to ensure that the labels/documents delivered to districts contain all requested data, reflect the options selected by districts, are accurate, and are printed at a level of quality that permits accurate scanning and precludes the possibility of smudging, smearing, and/or flaking. Contractors will provide quality control throughout the printing process to ensure the quality of label/document printing. The contractor will provide a separate roster of students using the same sort order used to prepare the student labels/documents. This roster will be used by districts and schools to verify the accuracy of certain information that must be correct before the label/document can be used.
7. A list of the primary materials to be shipped for each administration, the quantities to be packaged for schools, districts, and the Department, and other packaging specifications is provided in Appendix E.
8. The contractor's specifications for packing, distributing, and receiving materials will include the following provisions:
    a. The contractor will shrink-wrap materials in quantities specified by the Department. Some materials will not be shrink-wrapped (e.g., Test Administration Manuals). All secure materials will be shrink-wrapped.
    b. Schools within a district will be ordered by school number on all lists and for shipping purposes, unless the district has requested that materials be sorted in route code order, in which case the materials will be sorted by route code, by school number.
    c. The contractor will package and ship materials by district size as determined by the Department, beginning with the largest district. The largest district will receive materials at the beginning of the delivery window; the smallest district will receive materials last. District rank by size information will be updated annually by the Department.
    d. The contractor will label the boxes of test materials with the message "TO BE OPENED BY ASSESSMENT COORDINATOR ONLY." District boxes will be differentiated from school boxes by color (e.g., white district boxes and brown school boxes). Boxes containing the district/school packing lists, materials return kits, and ancillary materials must appear different (e.g., different color, colored stripe) from all other district and school boxes for easy identification. School boxes will be labeled with the name/number of the district and name/number of the school in at least a 16 point font. Label design must be approved by the Department. Only boxes directed to the district-level staff, such as boxes containing district overage, will be labeled with the name of the district assessment coordinator. The contractor will label district boxes (that contain overage and other materials for the district) on all four sides and the top, and number boxes as "Box 1 of X," where X is the total number of boxes sent to that district. The contractor will label school boxes on all four sides and the top, and number boxes as "Box 1 of X," where X is the total number of boxes sent to that school. If materials for more than one administration or type of material are shipped during the same window, the contractor must have a way to distinguish these shipments from each other (e.g., color-coded label on boxes). Boxes containing secure test materials must never indicate secure content on the outside of the boxes.
    e. For districts receiving more than one pallet in a shipment, a map listing the identity and location of boxes on each pallet will be provided electronically and will be provided at the time of delivery as a hard copy to the district assessment coordinator to assist with distribution of boxes in the district.
    f. The contractor must have a method to collect route code information from districts and package materials accordingly. If district assessment coordinators provide internal district delivery route code

information, the contractor will use this information to build pallets for districts to match district delivery route codes.

g. The contractor will pay charges on all materials shipped to and from each district. The contractor will make arrangements for and pay for shipment if, due to a delivery error, a district is asked to ship materials to another district. The contractor must use an overnight delivery service for such shipments. The contractor is not responsible for any costs schools may incur in shipping test materials from their schools to the district office, unless the need to ship is the result of a packaging error by the contractor. The contractor must also have a method for districts to order additional test and ancillary materials, as needed, in the online management system. The contractor must be aware that requests for additional materials are often critical and such shipments must be shipped overnight for early-morning delivery, on request.

h. The contractor must receive Department approval before shipping materials to districts. Approval will be provided after the Department has received and proofed examples of printed products and reviewed sample shipments, as described in the packaging and distribution specifications. Approval is sent via an Approval to Ship form.

i. Secure materials will be packaged sequentially in ascending barcode order (for example, if a school receives 200 secure documents and 100 documents fit in each box, Box 1 will contain the documents with barcode numbers 1-100, and the document with barcode #1 will be at the top of the documents contained in Box 1 and the document with barcode #100 will be at the bottom of the documents contained in Box 1. Box 2 will contain the documents with barcode numbers 101-200, and the document with barcode #101 will be at the top of the documents contained in Box 2 and the document with barcode #200 will be at the bottom of the documents contained in Box 2.). Packing lists must list all box contents in order as they are packaged with the first item on the list being the first item (on top) in the first box.

j. The contractor will package materials for each shipment by school in returnable boxes (double-walled) suitable for multiple uses. The contractor will provide additional boxes statewide for the return of materials that are available as an additional order for districts.

k. No box will be packed to weigh more than 25 pounds, and boxes will be of the dimensions, or similar to, those indicated in Table 7.4.1. If test materials require different box dimensions than those listed below, the specifications for boxes will be approved by the Department during the negotiation phase.

Table 7.4.1 Box Dimensions*

Table 7.4.1 Box Dimensions*	
BOX SIZE	**MATERIALS**
9.5” x 12” x 13”, Double-walled	Regular Print
9.5” x 12” x 6.5”, Double-walled	Regular Print
19” x 15” x 4.5”	Large Print/Braille
19” x 15” x 6”	Large Print/Braille
19” x 15” x 9”	Large Print/Braille

* Box height is dependent upon the quantity of materials in each shipment.

l. Upon completion of the delivery of each shipment, the contractor will provide proof of delivery to the Department indicating, but not limited to, a description of the materials, date/time of delivery, and the name of the staff member accepting the delivery. Proof of 100% delivery will be used for invoicing purposes.

m. The contractor will provide fifteen percent (15%) materials overage to each district for paper-based test materials and computer-based ancillary materials (work folders, etc.). The Department and districts will decide how materials overage will be distributed to districts and schools for each shipment. Districts may select from four (4) distinct algorithms for overage distribution:

   - All fifteen percent (15%) overage to the district
   - All fifteen percent (15%) overage to the school
   - Ten percent (10%) overage to the district and five percent (5%) overage to the school
   - Five percent (5%) overage to the district and ten percent (10%) overage to the school

n. The contractor must anticipate that some districts will require an additional pickup after the specified pickup date. This may occur in up to 15 districts for as many as 500 boxes for each spring administration, and in up to 10 districts for as many as 200 boxes for each retake and End-of-Course administration.

o. Large-print, Braille, and one-item-per-page materials are to be packaged and labeled separately and delivered to districts during the same delivery window as the shipment of other test materials in Test Materials Shipment 2 (TM2).

p. Preidentification labels and rosters will be packaged with test materials (included in TM2). If applicable, Wave 2 labels will be shipped separately.

q. It may be necessary for the contractor to ship test materials to districts/schools and the Department in multiple shipments per testing window, not including requests for additional materials. The number of shipments may vary depending on the administration. The respondent should refer to the approximate shipment dates provided in Appendix B. The contractor must be prepared to deliver some materials on alternate schedules per district request (e.g., to avoid conflicts with spring break or closures) and must have a method to effectively track these requests and ensure that shipping companies meet the revised dates. Shipping companies must never contact districts directly to arrange alternate delivery/pickup dates unless agreed upon by the Department.

r. The contractor will prepay charges on return shipments from districts. Return labels, prepaid postage labels, instructions, and other materials needed for return will be provided in a Materials Return Kit shipped in TM2.

s. Districts will return answer documents using overnight delivery, if deemed necessary to meet reporting deadlines. Materials will be returned according to a pickup schedule developed by the Department and the contractor that allows schools enough time to package materials and also meets scoring and calibration deadlines.

t. The contractor will be responsible for mailing or shipping any miscellaneous materials to the Department and districts by overnight delivery service or other means, as requested. The contractor is required to secure the services of shippers who will provide inside delivery and unload large shipments onto loading docks. All carrier vehicles must display the carrier name, and districts must be made aware of what carrier name to expect prior to the pickup or delivery date. Districts may or may not have a loading dock or the appropriate equipment to support the delivery and pickup of materials (e.g., shrink-wrap; hand-trucks). In this event, the contractor's shipper must be prepared to provide such services/materials. District staff is not expected to assist in loading or unloading materials, but will be available to provide instructions to the carrier. Carriers must communicate with district staff face-to-face when delivering or picking up materials, never leave materials unattended, and be prepared to protect materials in the event of inclement weather.

u. The contractor must develop procedures to monitor the receipt of all materials and develop error logs. The date materials are received and any errors made by districts in packaging and completing forms

must be documented. When problems arise, the contractor must contact districts and the Department to resolve them. Error logs will be identified by school and district, and will document all failures to follow the established procedures and, if appropriate, how the errors were resolved. The error logs will be delivered to the Department within three weeks after the scheduled receipt of materials from all districts.

v. The contractor will use a barcode numbering system to verify all secure materials returned after testing. The contractor will provide a written report to the Department documenting the check-in of all secure materials. f the contractor's system for barcode verification is demonstrated to be unreliable (e.g., materials not scanned properly), each document will be required to be scanned twice, creating independent data files that can be matched for scanning errors. Beyond these measures, the contractor will be required to manually check answer documents to ensure 100% accuracy of secure document check-in.

w. The contractor will include in its check-in procedures a method of checking for and retrieving used answer documents erroneously packaged with used and unused materials, invalidated materials, or test books. These "orphan" answer documents will be processed and scored under extended timelines and individual reports will be generated and shipped to the districts.

x. The contractor will produce statistical reports summarizing responses to the online test administrator, school coordinator, technology coordinator, and district coordinator comment forms. A summary, analysis, and list of recommended actions derived from the comment form responses, as well as a data file containing all responses, will be delivered to the Department no later than two (2) months after completion each administration. Contractor staff will be responsible for summarizing the open-ended responses received from district and school staff. This summary must be a categorized report, not simply a list of open-ended responses.

7.4.2 Missing Materials Report and Inventory

The contractor will prepare a missing materials report for all secure materials, based on the scanning that is completed during materials check-in. The report must be produced after all materials have been scanned, including as many orphan and late-returned documents as possible, and must not reflect materials that are not missing (e.g., contractor has verified against the soiled/destroyed documents list). The contractor must implement quality control measures to ensure the accuracy of the reports. The contractor will produce a preliminary missing materials report for Department review. The Department will review and approve the preliminary missing materials reports for distribution to districts. The Department requires ten working days to review preliminary reports prior to approval. Reports will be prepared for each affected school listing the title of the missing products and the corresponding barcode numbers. School reports will be delivered to district assessment coordinators with a district-level summary and memorandum, and a state-level summary report will be delivered to the Department. Any missing materials returned by districts will be recorded in the missing materials inventory maintained by the contractor. The contractor will deliver a final summary report of missing materials to the Department by the date indicated in the Deliverables Schedule.

7.4.3 Disposition and Storage of Materials

After testing, the contractor will inventory and store unused test and answer books, manuals, and other materials for a period of at least six (6) months. During this time, the contractor will be required to ship quantities of these materials, as necessary, to the Department and districts.

Replies should include a plan for secure destruction of excess test materials that requires Department approval. However, the contractor will store 100 copies of each test and answer book for each administration throughout the life of the project. In addition, the contractor will store some digital record of the CBT assessments as they appeared to the students for that administration. Any materials that may be used in subsequent assessments will be stored by the contractor throughout the life of the project. Additionally, six (6) months after the contract ends, the subcontractors and print vendors will be required to destroy all electronic files and used print copies according to the test security requirements approved by the Department.

On verification of the individual barcode numbers of all secure materials returned by the districts and acceptance by the Department of accurate results files, the contractor will store used documents containing student responses, at contractor expense, for a period of two (2) years. Likewise, all student CBT response files must be electronically archived for a two-year period. At the end of the two-year period, the contractor will ship or destroy the materials according to instructions from the Department. The contractor must submit a letter to the Department requesting permission to destroy specific materials. This process is already well-defined by the Department and will be shared at the initial contract management meeting. Test security requirements will be maintained throughout the destruction process. It may be necessary to retain a small number of used documents for a longer time period due to Department security investigations. At the end of the contract, the contractor will be expected to ship these materials to the new contractor.

Destruction of secure documents and CBT student response files must be requested in writing and authorized by the Department. The contractor and all subcontractors must submit certificates of destruction that describe in writing the specific items/files destroyed.

7.4.4 Retrieval of Answer Sheets and Test Books

In addition to the document retrieval specified in Section 7.4.1, the contractor will periodically be required to retrieve up to 1200 used test and answer books per grade, per administration from storage. Likewise, individual student response files from the computer-based testing system for up to 1200 students per grade, per subject, per administration may need to be retrieved. The contractor must maintain information related to warehouse location for each school's used materials to allow for retrieval as may be required for Department investigations or audits. In some cases, retrieval of answer documents will require the contractor to conduct a manual verification of machine scoring. The contractor will be responsible for costs associated with retrieval, review, and possible delivery of these materials to the Department. In addition, if errors are found, the contractor may be required to re-score and re-report these documents.

7.4.5 Innovative Product Design

New, innovative designs are required for all Florida-specific products developed by the contractor. Designs for publications will include the organization, format, and page or screen layouts for administration manuals, reports of assessment results, information publications, and other materials. Designs will also be produced for other products, as appropriate. The contractor will produce all graphics, charts, and illustrations for the products for which it is responsible and share designs and graphics with other contractors, as required by the Department. The design process will include furnishing conceptual art, design development, and final cover designs. The contractor will produce all graphics, charts, and illustrations and will secure the full range of copyrights and/or permissions that allow for production in print, secure web, and unsecure web format.

The contractor must arrange for personnel with professional expertise and experience in the areas of visual/graphic arts and document/software/web design to work on the design and development of documents and computer/online interfaces. If the contractor does not have qualified, professional personnel devoted primarily to visual/graphic arts and document/web design on staff, a subcontractor or subcontractors must be identified to provide these design services. Respondents should indicate in their replies the qualified personnel/subcontractors who will provide these professional services and include their vitae or other documentation of expertise and experience in the reply.

7.4.6 Printed Products – Administration

This section provides guidelines, including descriptions of and duration of review rounds, for all printed products required for test administration services in this ITN. Contractors must provide high-quality, carefully edited materials for each round of review by the Department.

7.4.6.1 Stages of Development of Printed Products – Administration

The contractor is responsible for producing the first written draft and all subsequent versions of all materials and products developed for this project, and for submitting documents for Department review. The review period for the Department is seven (7) work days, but longer review times will be required if multiple documents are under review simultaneously. For each review round, the contractor

will post an electronic version (PDF) by 9:00 a.m. ET on the first scheduled day of Department review. If materials are delivered or posted after 9:00 a.m., the review schedule will be revised accordingly. Documents for CBT-related materials will be posted to a secure website for review in their presentation format.

The delivery of administration materials is a critical task and workflow must be planned carefully. The overlap of reviews could create a burden on both the Department and contractor staff. Excessive burdens can be avoided with sufficient staffing, advanced planning, and an early start. The contractor must propose a detailed materials development schedule for managing the workflow and volume of documents to be reviewed in each seven (7) day period in a format approved by the Department. The contractor must develop a schedule for the production of test administration manuals that follows the review schedule of test books/answer documents or computer-based test forms by one round. The schedule must consider what is reasonable given the Department's staffing constraints. All proposed schedules must be approved by the Department. The number of documents to be reviewed in any seven (7) day period must be negotiated with and approved by the Department. The Department is committed to reviewing products submitted by the contractor as efficiently as possible.

The contractor is responsible for proofreading all documents during the production stages. The contractor will propose well-defined procedures to ensure that all drafts are checked by computer for spelling and proofed for complete accuracy by qualified proofreaders before they are sent to the Department for review. The contractor will submit a written report by the proofreaders indicating proposed results and actions. Before moving to digital proof stage, the Department will review and approve the proofreaders' report. Respondents should indicate in their replies the qualified personnel/subcontractors/independent editors who will be responsible for proofreading and include their vitae or other documentation of expertise and experience in the reply.

Test Administration Manuals

For respondents proposing solutions derived from other products, the Department understands that certain test administrations must be standardized, however, there are certain Florida requirements that must be met. Replies from such respondents should indicate which aspects of test administration are considered customizable, and a final determination will be agreed upon during the negotiation phase. For instance, the Department may require the production of test administration manuals specifically for Florida that include the standard information, or the production of Florida-specific supplementary publications that complement the contractor's more generic publications. The following information details the Department's expectations for Florida-specific stand-alone products.

For each year of the contract (Fall – Summer administrations), the following test administration manuals will be produced: One (1) ELA/L and Mathematics manual for paper-based tests; One (1) ELA/L and Mathematics manual for computer-based tests; One (1) ELA/L Retake manual (beginning with the first retake administration in 2015); (1) End-of-Course manual. Administration requirements and scripts for all assessed grade levels/subjects will be included in the manuals. Instructions for Special Format Tests will include scripts necessary for accommodated testing (e.g., Braille, one-item-per-page, and others) and will be provided as separate addenda to the manuals. Computer-based manuals will also include scripts for the practice tests necessary to familiarize students with the computer-based testing system. All manuals are published in print and on the contractor's website. Minimally, manuals will contain instructions and scripts for administering each portion of the assessments for the appropriate grade levels for that administration. They also include information about security of materials, packing and returning materials, receipt and distribution of materials, and the Department's test administration and security policies and procedures, which are subject to change with each administration. Revisions will be made as necessary to reflect program changes.

The contractor must plan to schedule production of test administration manual covers as separate mini-deliverables that will eventually be married to the final products. Each cover requires multiple review rounds by graphics designers, editors, and content specialists, and careful planning is required to meet production deadlines.

Test Administration Manuals are to be packaged (no shrink wrap) and delivered to districts for each administration as a part of TM1 according to the specifications in Appendix E, Part 3. All manuals must also be available in a Section-508 compliant (see Appendix E, Section 2) electronic format on both the Department's and contractor's websites within seven (7) days of Departmental approval of the web-tagged files. The suggested workflow for the Department and the contractor is provided in Appendix G to help the respondent anticipate the level of work required on the review rounds.

7.4.7 Test Administration Ancillary Materials

For the purpose of this ITN, test administration "ancillary materials" refers to printed or online products other than manuals produced by the contractor. Ancillary materials are developed with review rounds and email approval. Some ancillary materials will be printed and shipped with test materials (e.g., document count forms, return labels, paper bands). Some will be included as perforated pages in the manuals (e.g., security agreements, chain of custody form, blank administration record/security checklist, security log). Some will be developed and provided in an online format only (e.g., comment forms).

This section contains details regarding the ancillary materials required for administration. These materials are designed to ensure overall security, efficient and secure handling of materials, and standardized administration activities. In addition to the materials listed here, the contractor will provide, based on Department request and approval, a number of memoranda to assist in communications with districts regarding test administration processes and requirements.

The contractor will provide the required publication production and software development resources to produce the ancillary materials using current staff that have the necessary expertise and serve in such capacities on a full-time basis, through temporary staffing, or by subcontracting. Respondents should identify in their replies the staff who will be assigned to develop the ancillary materials and/or subcontractors proposed to complete these project tasks, as well as their qualifications (education and experience) to do so.

Most of the products identified in this section will be provided in formats that permit them to be accessed electronically via the internet on both the contractor's and Department's websites. Posted products must be available for viewing and downloading and must be provided in an ADA-compliant format, that is, a format compliant with Section 508 [29 U.S.C. § 794(d) & 36 CFR Part 1194] of the Rehabilitation Act, as amended, and s. 282.601, et seq., F.S. The Department will run standard Section 508-compliance checks on all documents to be posted on the Department website to ensure their accessibility. The contractor will be required to modify any noncompliant elements and provide compliant documents. The contractor is responsible for securing all copyright requirements, if applicable, for materials submitted for nonsecure web posting. (See Appendix E, Part 2 for additional information about Department guidelines for Section 508 pdf publications.)

The contractor will work with the Department to identify the specific requirements for files to be made accessible on the online management system and will provide the required files in a timely manner.

The contractor is responsible for developing the following materials for distribution to districts for each administration. These materials will be produced following the quantities and specifications identified in Appendix E. The contractor is also required to provide various other materials required to implement administration activities, including forms, labels, and documents.

7.4.7.1 Training Resources for School and District Technology Coordinators (CBT)

The contractor must provide training materials to support CBT test administrations. These materials may include screen-shots and will be delivered via narrated PowerPoint web presentations, WebEx, training module, or other similar mode through the CBT test platform.

These training materials will consist of an outline of key issues to be covered during school and district technology coordinator training with explanations accompanied by full-color graphics, including screen-shots, representing critical elements or live demonstrations of processes in the online management system.

All training materials are to be made available to districts in a Section-508 compliant electronic format on both the Department's and contractor's website within seven (7) days of Departmental final approval of the web-tagged files.

7.4.7.2 Instructions and Materials for Braille Tests

The contractor must develop Braille scripts and Braille notes for the administration of Braille tests for each subject and grade. The braille notes are secure materials and must be handled accordingly. The Braille notes and Braille scripts are distributed with the secure test materials, and they must be approved by the Department prior to production. In addition, some items may require manipulatives to allow access for visually impaired students. These manipulatives are provided, prepared, and shipped to the districts by the contractor.

7.4.7.3 Student Preidentification Labels

The contractor will produce student preidentification labels for each student to be tested on a paper-based assessment for whom preidentification data were provided by the districts. (See Section 7.5.2 for more information about the preidentification process.) Labels will be provided for each student answer document as needed. Local school staff will be responsible for placing labels on student answer documents.

- One label for each answer document not already preprinted
- Sorted as specified by each district (may be different for each grade/subject and different for schools within a district)
- Sorted with page breaks as specified by the district/Department
- 3" x 3 ½" adhesive labels or approved equivalent
- A supplementary supply of labels will be produced for spring administrations (Wave 2) based on PreID information gathered in January

7.4.7.4 Student PreID Rosters

The contractor will provide a preidentification list containing all information included on the student PreID labels for each school in a format approved by the Department. The list is produced from the same file used to print student PreID labels and contains the same information. (See Section 7.5.2 for more information about the preidentification process.) One row of information per student will be used to verify the accuracy of student demographic information. Rosters will be provided in hard copies to schools and electronically via the contractor's secure website. 8 ½" x 11" paper is preferred, but the Department may approve 8 ½" x 14" if this is required for readability.

7.4.7.5 Document Count Form (DCF)

The contractor will provide Document Count Forms (DCF). The DCF is a pregridded, scannable, 8 ½" X 11" document used to inventory answer documents returned by each school. The form specifies the subject and grade level test placed underneath it and ensures that the correct number of documents is scanned. Forms must be preidentified with district/school names and numbers, and blank forms will also be sent as this information may also be hand-gridded. The district/school number should match the numbers on the answer documents underneath them, and the number of documents gridded on the DCF should match the number of documents beneath it. If discrepancies are discovered during scanning, the contractor will work to resolve them, as described in the Scoring and Reporting Specifications.

If the respondent employs a different acceptable method/form for the process described above, the Department and the contractor will agree on the final process during the negotiation phase.

7.4.7.6 Administration Record/Security Checklist

Security barcode numbers of all secure materials listed in ascending order by product, will be provided to a school/district with space to indicate assignment and return of materials. The Department expects that the checklist will also include box numbers and section breaks between packages and will be provided electronically in an editable format to districts.

If the respondent employs a different acceptable method/form for the process described above, the Department and the contractor will agree on the final process during the negotiation phase.

7.4.7.7 Comment Forms

The contractor will work with the Department to create the following ADA-compliant online forms that will be posted to the contractor's website for each administration:

- Test Administrator Comment Form (One for paper-based and one for computer-based)
- School Coordinator Comment Form (One for paper-based and one for computer-based)
- District Coordinator Comment Form (One for paper-based and one for computer-based)
- Technology Coordinator Form (CBT only)
- CBT Student Comment Form

The final output of the comment form responses is described in #26 under Section 7.4.1.

7.4.7.8 Return Shipping Labels

The contractor will provide preprinted, adhesive, color-coded (as required by the Department) labels for district use in returning materials.

7.4.7.9 Materials Return Kit – District

The contractor will provide envelopes containing return shipping labels, bills of lading, return instructions memorandum, and Braille notes and scripts, if applicable.

7.4.7.10 Materials Return Kit – School

The contractor will provide envelopes containing document count forms, paper bands, and color-coded return shipping labels.

7.4.7.11 Miscellaneous Return Materials

The contractor will provide envelopes and boxes necessary for packaging large-print, Braille, and other special program and special format materials for district use in returning materials.

7.4.7.12 Paper Bands

Printed paper bands, preferably 4" x 24" adhesive, will be provided by the contractor for bundling scorable materials and provided to schools and districts. The adhesive must not cover the entire width of the band to avoid adhering to the documents contained in the band. The bands must be printed on one side to identify the type of answer document in bundle. Bands must be 8pt. Carolina paper or approved equivalent. In addition, paper band quality must be suitable for filling in information lines on band with multiple pen/pencil types (e.g., markers, ball point pens, pencils) without smearing/smudging.

If the respondent employs a different acceptable method for the process described above, the Department and the selected contractor will agree on the final process during the negotiation phase.

7.4.7.13 Rulers / Manipulatives / Calculators

If any test items require the use of a ruler or manipulative, the contractor will produce/provide these materials for testing in a reliable, cost-efficient manner. Respondents should describe proposed functionality and features of calculators required for Mathematics tests and the Department will provide an approved list of calculators for student use. (Contractors will not be required to provide hand-held calculators to districts.) Any testing accessories required for computer-based tests must be built into the platform and must also be available for paper-based tests. If materials not listed in this ITN are needed for testing, they should be clearly identified in the respondent's reply and the Department will specify its requirements during the negotiation phase.

7.4.7.14 Miscellaneous Memos, Forms, Labels, and Other Products

The contractor will provide the following products:

- Miscellaneous memoranda to the district coordinators may be necessary for each administration. Letters and memoranda will be of a length to be determined by the Department, up to five (5) pages each, and length of documents may change at each production round.
- Cover memoranda for all shipments of materials indicating what is being shipped and how it is packed.
- Packing lists must be provided with all shipments (district coordinator receives a hard copy of the district and all school packing lists and receives all lists electronically as soon as they are available).
- Pallet lists (maps) must be provided to any district that has materials on pallets.
- Other miscellaneous memoranda, labels, forms, etc., will be required to implement the program.

7.4.8 Online Management System

The contractor's online management system described in this section will be the primary resource for all student data management (paper-based and computer-based), as well as test administration and reporting tasks. The expectations of this ITN are written with the full understanding that capabilities for an online management system are expanding quickly. The Department is interested in reviewing innovative procedures and techniques for managing student assessment online, which take advantage of the maturation of technology in educational assessment through the life of the contract arising from this ITN. Therefore, the respondent may submit a reply that varies from the expectations herein as long as the solution meets the needs of the Department and the intent of the ITN. Respondents should agree to work with the Department to amend the specifications, expectations, and requirements to ensure that the Florida testing program keeps pace with the expanding capabilities of test delivery and management via computer. Any such variations will be resolved and agreed to during the negotiation phase.

The online management system should be a secure site that requires usernames and passwords and accounts should be customizable based on the access a user will have (state-level, district-level, school-level, etc.). Depending on the access level, a user should be able to view other organizations in the system (i.e., a state-level user may select and view any district or school in the state) and have the ability to make changes or alter data in those organizations.

The Department will provide the contractor with a list of the current names, addresses, email addresses, and phone and fax numbers of the district assessment coordinators. The contractor will populate the password-protected online system with this information to create initial district-level user accounts. New accounts should be able to be created individually or via file upload to create multiple new accounts or make updates to existing accounts.

The system should allow districts to upload enrollment counts, preidentification files, and to place additional orders for materials. Using the Department's Master School Identification (MSID) file, the contractor will populate the system with all active districts and schools. The system must have the ability to add additional schools that are not on the MSID file (e.g., private schools), and these schools may require special school types as determined by the department.

Components of the contractor's online systems (e.g., websites, databases) must be submitted to the Department for review of content, layout, aesthetic quality, and functionality. The contractor will make any requested changes to such systems. The online systems may not be used for contractor advertisements or other promotional purposes. The "branding" of these systems should be primarily for Florida's assessment system, but may include contractor logos and other information as approved by the Department.

The system should also accommodate CBT delivery. All systems that identify, prepare for, and monitor student test participation must have the capacity to distinguish between paper-based and computer-based tests, including all applications of preidentification and enrollment files. These systems must also be able to accurately track student participation by delivery mode (paper-based, computer-based, or both) and reflect the test delivery mode(s) in each student file.

The system should be designed to provide user access to various non-secure and secure links including:

- general system introduction and descriptive information;
- updates to current operational status and special situations;
- self-running software to test the suitability of computers for test delivery;
- self-running software to download a "secure browser" to ensure test and system security;
- all user guides, manuals, training, and ancillary materials in downloadable format;
- procedures to add, modify, or remove students or student information in preparation for testing or reporting;
- record test group codes and accommodations for computer-based tests;
- ability to invalidate computer-based tests;
- procedures for school and district staff to update contact information;
- access to an online help-desk chat system;
- system status website to display operability status of testing components;
- access to instances of all computer-delivered tests serving Florida K-12 education programs;
- access to order additional test materials and track shipments;
- access to packing lists, pallet maps, security checklists (pre-populated with security numbers of secure materials), and material summaries;
- results files and reports;
- web-based student practice tests;
- self-paced training resources for test setup and administration tasks;
- Training center to enable practice for test setup tasks and to run an infrastructure test to test capacity at testing sites; and an
- infrastructure test.

The system must collect and maintain records for students as they move through Florida's public school systems. An individual student's test results must be maintained in electronic archive for the life of the contract and must be returned to the Department at contract termination.

7.4.8.1 Test Staff Contact Information

It is necessary for the contractor to maintain accurate lists of district and school information and staff associated with Florida public education testing programs as specified by the Department. This information must be easy to update by school staff as information changes. This information must include each user's security authorization level and provide an accessible log, in viewable and printable format, of each user's participation in the system, including type of participation, date and time of participation, etc. (see also Section 7.4.1).

7.4.8.2 Test Staff Passwords

The system must securely deliver and maintain system access passwords to users as necessary. The passwords must access a hierarchical permissions structure available for school, district, and state users. The contractor will work with the Department to determine expiration timelines for passwords and user accounts.

7.4.8.3 Test Session Requirements

The system must have available during all steps in initiating and delivering tests:

- a school look-up sub-system;
- a searchable, sortable student look-up sub-system;
- rosters of students in each test session.

During the test session, automated backup, recovery, and restart procedures for the system must be in place. The system will recover data from any unforeseen test interruption and return the test-taker to the point of interruption. The system must also show student status and progress through the items in the test. The Department should be able to view uploaded student responses real-time while students are completing the assessments in the event of an unforeseen test interruption. Contractor and department users must have the ability to restart a submitted test. The tests should only be available during specified administration windows. The features and interface of the system may be customizable, and the contractor will consider requests for customization from the Department.

7.4.8.4 Security Requirements

Security of tests and individual test results must be maintained. Access to student test results must be restricted to authorized Department staff and school district personnel based on a secure, encrypted, password protected system.

The system must assure proper identification of each student and the accurate matching of the student to his/her test results. Preferably, the system must ensure that a student can take each computer-based test just once per login unless authorized by the department. If an error is found (e.g., student tests with the wrong login information) the system must have the ability to link the test to the correct student profile.

The ability to make changes to data or processes in any part of the system must be based on a password-protected, hierarchical permissions structure.

Respondents should respond to each of the following items:

- Describe the security controls over all system aspects.
- Describe the "levels" of security provided in the system.
- Describe how the ability to limit access to specific system functions or modules is provided.
- Describe the log-in security method and assurances to maintain individual confidentiality of test results.
- Describe the authentication process to ensure that an individual is the person logging into the system (e.g., the student taking the test is who s/he says s/he is).

The contractor and Department staff will create a report that includes a checklist of all operable aspects of the system to be used each invoice period. The contractor will prepare the report listing any malfunctions or unavailability of the system for Department signoff each period.

7.4.9 Computer-Based Test Administration Overview

The expectations in this ITN are written with the full understanding that computer-based testing (CBT) capabilities are expanding quickly. The Department is interested in reviewing innovative procedures and techniques for item development, test delivery, scoring (see Section 7.5.4), and reporting (see Section 7.5.5) which take advantage of the maturation of technology in educational assessment through the life of the contract arising from this ITN. Therefore, the respondent may submit a reply that varies from the expectations herein as long as the solution meets the needs of the Department and the intent of the ITN. Respondents should agree to work with the Department to amend the specifications, expectations, and requirements to ensure that the Florida testing program keeps pace with the expanding capabilities of test delivery and management via computer. Any such variations will be resolved and agreed to during the negotiation phase.

The computer-based test system should be capable of being customized to meet the needs of Florida students, school and district personnel, and the Department. The reply should indicate procedures used to ensure that the computer-based tests accurately assess students possessing a diverse range of physical, sensory, and cognitive abilities; the system should ensure adherence to universal design concepts. The system should be easy to use for all participants, intuitive, and deliver a consistent "look and feel" for all computer-delivered test programs provided by the Department. This includes item layouts, navigation tools, and administrative controls such as managing participant demographic and performance information, as well as CBT setup activities. The contractor will modify any proposed system to achieve these objectives.

The contractor and Department staff will create a report that includes a checklist of all operable aspects of the system to be used each invoice period. The contractor will prepare the report listing any malfunctions or unavailability of the system for Department signoff each period.

If the Department determines that the computer-based system is not performing adequately, exhibits malfunctions that may significantly affect the student testing experience, or is unable to meet the requirements listed in this ITN, the contractor will propose a solution to the Department, including providing paper-based tests at no additional cost, that allows for students to participate in the assessments and for the Department to gather the necessary data.

7.4.9.1 Hardware and Software Requirements

The system should:

- Support both wired and wireless connections to the system and all eligible devices that meet the specifications in the table in Section 7.4.9.2. The respondent should also commit to continued support for future updates similar to those made available on the latest version of Partnership for Assessment of Readiness for College and Careers' (PARCC) Technology Guidelines that can be found at (http://www.parcconline.org/technology). Other assistive technologies may be needed for students requiring accommodations.

- Support eligible devices with capabilities to "lock down" the device to temporarily disable features, functionalities, and applications that could present a security risk during test administration. Features that will need to be controlled during test administration include, but are not limited to, unrestricted Internet access, cameras (still and video), screen capture (live and recorded), email, instant messaging, Bluetooth connections, application switching, and printing. The contractor will develop, deliver, and continuously improve capabilities to "lock down" the device for the applicable operating systems and browsers.

- Support the current version within six months of release and two prior versions of the web browsers listed below (as of June 2013).

  Web Browser Support List:
  Apple Safari
  Google Chrome
  Microsoft Internet Explorer
  Mozilla Firefox

7.4.9.2 Eligible Device Specifications

At the time of the development of this ITN, the device specifications that are recommended for Florida's public schools are provided below. The respondent's platform for computer-based testing should be able to perform, at a minimum, on devices that meet the specifications in Tables 7.4.9.2.A and 7.4.9.2.B.

Table 7.4.9.2.A. Device Specifications for Desktop, Laptop, Netbook, and Thin Client/VDI Computers

Table 7.4.9.2.A Device Specifications for Desktop, Laptop, Netbook, and Thin Client[1]/VDI Computers	
Operating System	**Specifications**
Windows	Windows 7 or newer
Mac OS	Mac OS X 10.7 or newer
Linux	Linux: Ubuntu 11.10, Fedora 16 or newer
Chrome OS	Chrome OS 19 or newer
Memory	1 GB RAM or greater
Connectivity	Computers must be able to connect to the Internet via wired or wireless networks.
Screen Size	9.5 inch screen size or larger
Screen Resolution	1024 x 768 resolution[2] or higher
Input Device Requirements	Keyboard Mouse or Touchpad or Touchscreen
	The input device must allow students to select/deselect, drag, and highlight text, objects, and areas. The input device must allow students to enter letters, numbers, and symbols and shift, tab, return, delete, and backspace. To meet security guidelines, each Bluetooth/wireless keyboard must be configured to pair with only a single computer during assessment administration. Other assistive technologies may be needed for students requiring accommodations.
Headphone/Earphone and Microphone Requirements (Some student accommodations may require headphones/ earphones (e.g., text to speech).	Headphones/Earphones Microphone
Additional Guidance	[1] Each computer operating in a thin client environment must meet or exceed minimum hardware specifications, as well as bandwidth and security requirements. [2]Computers must accommodate the 1024 x 768 screen resolution minimum without panning. Some netbook computers may have screen resolutions slightly less than the 1024 x 768 minimum, yet may meet all other minimum requirements. Depending on netbook model specifics, school technology administrators may be able to reset screen resolution to meet guidelines.

Table 7.4.9.2.B. Device Specifications for Tablets

Table 7.4.9.2.B Device Specifications for Tablets	
Operating System	**Specifications**
Android	Android 4.0 or newer (with 1 GB RAM or greater)
Apple iOS	iPad 2 or newer running iOS 6 or newer (with 512 MB RAM or greater)
Windows	Windows 8 or newer (with 1 GB RAM or greater)
Memory	By operating system
Connectivity	Tablets must be able to connect to the Internet via wired or wireless networks.
Screen Size	9.5 inch screen size or larger
Screen Resolution	1024 x 768 resolution[2] or higher
Input Device Requirements	Keyboard Touchscreen or Mouse
	Due to the onscreen space occupied by a tablet's virtual keyboard, assessments will require external keyboards for test takers using tablets so as not to limit or obscure the view of test item content and related functionalities when text input is required. External keyboards must allow students to enter letters, numbers, and symbols and shift, tab, return, delete, and backspace. Tablet touchscreen interfaces can be used for student interactions with the assessments other than text input, including to select/deselect, drag, and highlight text, objects, and areas. To meet security guidelines, each Bluetooth/wireless keyboard must be configured to pair with only a single computer during assessment administration. Other assistive technologies may be needed for students requiring accommodations.
Headphone/Earphone and Microphone Requirements (Some student accommodations may require headphones/ earphones (e.g., text to speech).	Headphones/Earphones Microphone

7.4.9.3 System Performance Requirements

The system must demonstrate and report that it can meet the following performance requirements in a controlled Internet access environment, requiring a bandwidth connection of no more than five (5) kilobits per second (kbps) per simultaneous test taker using a caching solution or fifty (50) kbps per simultaneous test taker without caching:

- deliver less than one second mean screen refresh rate for 90% of all users; and,
- ensure that no users have a refresh rate of greater than five (5) seconds.

The respondent should describe the ability to support a substantial number of simultaneous online users of the system (up to fifty percent (50%) of the current Membership in Florida Public Schools as determined through the most recent Survey 2 data under the Education Information & Accountability Services (EIAS) found at http://www.fldoe.org/eias/eiaspubs/pubstudent.asp). The respondent should consider any services provided to other states when presenting this information. The contractor must continually monitor and report to the Department the number of simultaneous online users of the system during student testing periods.

7.4.9.4 Connectivity Requirements

The respondent should consider existing and planned communications infrastructures when proposing its system. Preferably, school, district, and Department technology architecture and computing hardware should not have to be replaced.

7.4.9.5 Test Site Set-Up/Certification Requirements

The contractor will develop specifications for, and deliver a system to operate/deliver online tests and that serves as:

- a secure browser, which both [a] locks access to all other computer and web programs, applications, and files, and [b] masks and directly accesses the testing host web site; and,
- a system check, monitoring required computer software and connectivity readiness for testing and which can be run from individual machines.

The contractor will be responsible for assisting schools in certifying that computers are properly prepared and can make the necessary Internet connections to successfully deliver tests. The contractor will develop and make available an infrastructure test, consisting of mock items, that replicates the size of the largest CBT and is run on the actual testing platform (i.e., users log in to the testing platform as if they were logging into a live test). The contractor will assist the Department in developing a guide to walk users through running the trial on machines that will be used for testing to help them identify technical issues and make adjustments prior to live testing.

The respondent should describe the proposed test site set-up, certification, and system check measures in the reply.

THE REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

7.4.9.6 Computer-Based Test Presentation Requirements
Table 7.4.9.6 CBT Tools and Features

The following table lists required and preferred tools and features in the CBT platform. Accommodated features are required. More information about the test accommodations that must be provided for students are provided in Appendix H.

Table 7.4.9.6 CBT Tools and Features	
Tool	**Description**
	Required Features
Calculator	Computer-based calculators will be available to students for the mathematics tests. Numbers and functions on the on-screen calculator will be activated by mouse-click on the displayed button, or by keystroke of the appropriate keyboard key. User-acceptance testing will be required to assure that calculations are performed in the same sequence and with the same rounding rules applied as the hand-held calculators. Respondents should describe proposed functionality and features of calculators to be included in computer-based test forms.
Reference Sheet	The system must be capable of displaying a pop-up reference sheet for mathematics tests. This will be capable of being enlarged and the Department prefers that, when open, the reference sheet not obscure portions of the test item.
Ruler	If it is determined that some mathematics test items require the use of a ruler, a pop-up ruler will be available to students. The ruler will be easily moved and rotated on-screen by the student.
	Preferred Features
Straight Edge	A pop-up straight edge, without measurement increments. The straight edge will be easily moved and rotated on-screen by the student.
Option Eliminator	A feature for eliminating options. However, the feature **cannot** eliminate the option by placing any mark on or in close proximity to the bubble that would be used for marking a response. It must allow the student to easily read the option after it has been eliminated. Students must be able to undo the elimination.
Bookmark	Mark test items for review and navigate easily to return to previous items, including those bookmarked for later review. Bookmarked items should be visible on an item summary page at the end of the assessment.
Highlighter	Highlight text on all tests and to erase the highlighting. If a student highlights in a reading passage, the highlighting should remain through all items related to that passage until the student erases it.
Notes	Allow students to create electronic notes for reading passages if desired. These notes must not hinder reading of the passage. Notes should travel for each passage and item associated with that passage, then refresh with each new passage.
Footnote Pop-up	Reading items require a pop-up footnote. That is, if the student clicks on a footnote number occurring in the passage, the text for the footnote appears. Footnotes must also appear at the end of the passage.

Table 7.4.9.6 CBT Tools and Features	
Tool	**Description**
Student Tutorials/Practice Sessions	Each student that takes the computer-based test must have the opportunity to learn how to use the tools, select/enter responses, and navigate the system in a short practice session with instructions that may be either teacher-directed or independently conducted, as described in Section 7.3.7.5. The contractor will produce and make available a web-based practice test for each assessment. **The contractor may also provide access to a selectable practice test at the beginning of any test session within the platform.**
Accommodated Features (Required)	
Variable Font	The system must be able to display items and text using variable font sizes. For example, footnotes for words in passages must appear smaller at the end of the passage than the text used in the passage.
Administrator-Selectable Zoom	The system must be able to Zoom in increments from approximately 12 point to approximately 72 point available for the student to zoom or for the administrator to preset. Graphics must be able to be enlarged also. Any buttons, tools, the pointer/cursor, and the scrollbar must also enlarge based on the zoom level selected.
Administrator-Selectable Large-Print Font	The system must allow for selection of a large print font of at least 14 point font and up to 72 point font. The student must then be able to zoom as indicated above.
Administrator-Selectable Variable Font and Background Colors	The system must allow for selection from a pallet of colors for font and background colors. The Department prefers fonts of black, dark blue, light blue, pink, and yellow with backgrounds of white, black, brown, or dark blue. Other colors may be recommended. Any buttons, tools, the pointer/cursor, and the scrollbar must also change based on the colors/fonts selected.
Administrator-Selectable Screen Reader	Provide an integrated (preferably password-enabled) selectable screen reader capable of reading via headset to the student, all text, mathematical symbols, and text within graphics. The contractor must ensure that the screen reader has one consistent voice and is not operating-system specific. The contractor must run quality control checks on all products, test forms, graphics, and items to ensure the screen reader pronounces words correctly.
Administrator-Selectable Assistive Devices Integration	Support assistive/adaptive devices commonly available to support computer input and interaction to persons with disabilities.

7.4.9.7 Computer-Based Test Screen Layout Requirements

The contractor is required to recommend a set of screen layouts for the presentation of computer-delivered test items. (See also Sections 7.3.11.2 and 7.4.8) These layouts must include:

- prominently displayed student identifying information [name, student ID, etc., as specified by the Department];
- icons to access the item tools/references noted above; and
- icons presented with consistent location and look and feel across all screen layout options.

Additionally, the system must code and capture in the item bank the basic screen layout used to deliver the item on computer to students.

7.4.9.8 Training Delivery Requirements

The contractor will develop specifications for and produce a training plan to provide initial training and supply materials to support on-going training for audiences including, but not limited to:

- the Department K-12 Student Assessment program team;
- other Department staff;
- district assessment coordinators;
- school assessment coordinators;
- school and district hardware/network technical staff; and,
- school and district test administrators.

The Department prefers the contractor to deliver in-person training to approximately 500 key Department and district personnel in as many as ten (10) sessions of not more than one-half (½) day each, held throughout Florida prior to the first implementation of the new computer-delivery platform, which will occur in the spring of 2015. Additional training should be provided via WebEx or similar web-delivered, interactive sessions scheduled at least six (6) weeks in advance of the opening of each online assessment window. These training requirements are in addition to the training materials described in Section 7.4.7.1.

7.4.9.9 Technology-Supported Item Types

The Department is interested in leveraging empirically-validated item formats which take advantage of the capabilities of computer technology. Examples of these item types may include:

- Drag-and-Drop – in which students select from multiple possible responses to select one, via mouse-click or key-stroke combination, and then "drag" it to insert (drop) it in an indicated blank to correctly complete a mathematics formula, text-editing task, etc. This process may be repeated for the same test item so that multiple answers are placed into multiple blanks.
- Rotate and other image transformation items.
- Other formats as the contractor may recommend or the Department may request.
- The respondent may include the capacity to support these types of items in the reply.

7.4.10 Customer Service and Technical Support

The contractor will provide customer service via toll-free phone and email between 7:00 a.m. and 8:30 p.m., Eastern Time. The service will be staffed appropriately, as needed, with personnel designated to respond to assessment program calls and perform other Florida assessment program tasks specific to the assessments detailed in this ITN. Customer service staff must document all communications in a log and furnish it daily to the Department during each administration or upon request as needed. The contractor will develop a call topic matrix, with the Department's guidance, to ensure that calls are responded to in a consistent and appropriate manner.

Beginning not less than four weeks before and extending one (1) full week after each test administration, the contractor must use additional customer service personnel to handle computer-based test administration calls, and personnel who are able to provide advanced technical support must be immediately available for any issues that cannot be resolved by call center staff. The Department is interested in systems which provide help desk functionality via telephone and Internet "chat" systems.

The system should employ a Department auditable job-ticket method of tracking issue types, status, and individual client trouble calls/emails including current aggregate status information for resolution.

7.5.0 Scanning, Scoring, and Reporting

This section of the ITN provides a description of the scanning, scoring, and reporting requirements for this project. Section 7.5.2 provides details for preparing school and student information, and Sections 7.5.3, 7.5.4, and 7.5.5 provide the requirements for the scanning, scoring, and reporting, respectively. The steps necessary to verify the accuracy of these procedures are described in Section 7.5.6.

The contractor must assign experienced staff to complete the scanning, scoring, and reporting tasks and to coordinate with the test development, the test administration, and the psychometric staff during various phases of the scanning, scoring, and reporting. As described in Section 7.7.2, it is anticipated that one of the four project managers will focus on scoring and reporting and one will focus on computer-based testing. The one-page vitae for each of the professional personnel must indicate their scanning, scoring, and reporting experience within the organization to ensure the critical and extra-critical dates may be met.

The contractor's scoring and reporting staff must coordinate with the development team to ensure the file layouts accurately reflect the final tests; with the test administration team to obtain information about testing procedures, schools, and students; and with the psychometric staff to ensure timely file verification and transfer during the scoring and reporting process.

The contractor must verify the accuracy of all files and reports prior to submission to the Department for review. The contractor will develop staffing plans to complete its review of files and reports and then provide the Department time to complete its review.

Because of the secure nature of the personally identifiable student information that is used for this assessment program, stringent security measures must be in place for the Department and the selected contractor. See Appendix I for more information on these measures.

7.5.1 Scoring and Reporting Specifications

In **April** of each year, the contractor will submit the first draft of the **Scoring and Reporting Specifications** for all tests within a school year. These specifications provide details to ensure accurate and timely scanning, scoring, and reporting for the following school year. The specifications are initially drafted by the contractor using the specifications from the prior school year, updating procedures or products as instructed by the Department. This initial draft includes anticipated schedules for planning the next school year, details on file naming conventions, as well as the scanning, editing, scoring, and reporting procedures. These specifications do not contain confidential information or exact replicas of products; they provide the general requirements and processing steps using information from the prior year to assist in planning. If the initial draft needs extensive editing, a second draft must be submitted by the contractor.

These specifications are used to communicate between the contractor and the Department throughout the school year with details added as necessary during the year to ensure that procedures and products are sufficiently described and any changes in procedures are documented. The contractor will anticipate having additional documentation for its internal communications.

At the initial planning meeting, the Department will provide the contractor with the 2013-2014 Scoring and Reporting Specifications with a list of updates for the contractor to make for the initial draft of the 2014-15 specifications. The reply should clearly indicate how the scoring and reporting staff will coordinate with the other staff members to enable the contractor to develop the Scoring and Reporting Specifications each April for the following school year while at the same time conducting the current year's spring reporting activities.

During the school year, the contractor will maintain an addendum to the specifications noting updates, issues, or changes to the specifications. This specifications addendum will be used to document changes made in the specifications during the school year and to update the specifications for the next school year. If necessary, the contractor may be requested to provide the Department with updated versions of the specifications throughout the year. **The contractor will submit the final specifications addendum at the same time as the last closeout file of student results for that school year.**

After the initial draft of the specifications has been reviewed by the Department and any edits or comments have been incorporated by the contractor, development of file layouts and other procedures may begin for the first administration in that school year.

See **Appendix B** for the critical and extra critical dates associated with the reports described in this section.

7.5.2 Preparing School and Student Information (MSID and PreID)

1. To aid in the accuracy of reporting results, before the initial wave of reporting the contractor must perform checks to be sure that school names and numbers are accurate and that each student's scores are reported to the correct school. Due to the numerous types of special schools (e.g., home schools and virtual schools) and numerous students testing in schools that are different than the schools where their scores are reported, school numbers must often be updated after scanning. The contractor must provide staff necessary to make updates to student information and school information between scanning and reporting when conflicting information has been provided. The contractor will assist the Department and districts to ensure that each student's scores are reported to the correct school during the initial wave of reporting.

2. The Department maintains a Master School Identification (MSID) website with active school information. The Department will determine dates that the contractor will download information from the MSID website to be used for each administration. Due to multiple waves of reporting for each administration, as well as reporting annual EOC results, it is important to use consistent school information and to report scores using the information from the MSID website. The Department will provide the contractor with any changes or updates to any information on this site, such as changing a school name for the annual reporting. The contractor will not make changes to school information or add/delete schools unless directed by the Department.

3. To reduce the amount of information a student must provide during testing, for each administration the contractor will obtain student information from each district prior to testing. This preidentification (PreID) information includes student demographic information, requests for special print materials, and school numbers of the school where the student will test and the school where their results will be reported.

   In the past, the Department has obtained PreID information in a text file from each district during one time period each fall and summer, and two time periods each spring. The PreID information was then loaded into the CBT system or used to create adhesive PreID labels for answer documents.

   The reply should include a description of how the contractor would obtain and update the PreID information to provide the most accurate results. Respondents may propose other options to adhesive labels, such as pregridding (preslugging) answer documents. The Department wants to obtain the most cost efficient methods that will ensure accurate results.

4. The Department will determine the dates the districts will be permitted to submit PreID information, the number of PreID windows, how and which information may be updated, the rules for accepting or rejecting records or files, and the final method of preidentifying the answer documents.

5. The contractor will draft the PreID file layouts and the PreID instructions for each administration and incorporate changes as requested by the Department. The Department will send the final PreID instructions and file layout to the districts. The contractor will also post the layout on the online management system as instructed by the Department.

6. The contractor must complete numerous steps to ensure the accuracy of the PreID information submitted by each district, and the contractor must work with district staff when necessary to ensure that the PreID files are properly uploaded in a timely manner with just one unique record for each student in the district.

   a. First, the contractor must be sure that only schools that are active in the MSID file or approved by the Department (e.g., a participating private school or community college) are used in each district's PreID file. Then, the contractor must ensure that each field in the PreID file submitted by the district

is completed with valid characters as described in the layout and that the values are reasonable. For example, if all records submitted for Algebra 1 are coded as first-time takers in a district or all are coded as female, the contractor must alert the district and permit updates as necessary. Also, the contractor must compare the numbers of students in each district to the number of students tested in the previous comparable administration to identify any issues with the number of records in the district's file and take corrective action as necessary. The reply should include a description of the system it will use to ensure the accuracy and reasonableness of these files.

b. Two days prior to the close of each PreID window, the contractor will contact the districts that have not successfully submitted a PreID file and aid the district to ensure each district is able to submit its data.

c. During the PreID window, to assist district staff in reviewing the files as read by the contractor, the contractor creates PreID Frequency Reports with n-counts for various demographic groups for each district to review in the online management system. The contractor will also generate a PreID Frequency Report with state totals for the Department to review.

d. The district may submit additional files to make corrections during the PreID window. The contractor will draft the format of these reports and make updates as provided by the Department. The reply should include examples of the types of reports that might be used to aid districts in reviewing the PreID data and methods to make updates and corrections while ensuring the final files include one record per student with accurate information.

e. After the PreID window closes, the contractor provides the Department with a state PreID file containing all the accepted records that were submitted by the districts. This file will be in the same format as the files provided by the districts, one record per student, except with a unique PreID Number, generated by the contractor, for each student. The PreID Number is used for each test the student is assigned within that administration and the PreID Number is unique across administrations for each school year. For example, if a student in grade 8 is taking ELA/L and Algebra 1 in the spring, that student will have one PreID number for both spring assessments, and that number will not be used again during that school year.

f. If a student's school is incorrect in the district's PreID file in (e.g., student moved), school or district staff will grid the student information on the cover of the answer document or add student information using the online management system prior to testing.

g. If a student will be tested in a school other than the school used for reporting, PreID labels are sent to the school where the student will test or the CBT record is set up where the student will test. This is called the Alternate District/School Number.

h. The contractor will print PreID Student Rosters and include them with the shipments of PreID labels (or preidentified answer documents) to districts. These rosters list the information on the PreID labels and an explanation of the codes used on the PreID labels. The contractor will provide hard-copy PreID Student Rosters with the PreID labels and electronic copies on the contractor's secure website as specified in the Scoring and Reporting Specifications. Each spring, via a second PreID window to provide updates closer to testing, the contractor will provide a supplemental shipment of PreID labels and rosters to districts that update their PreID files.

i. As permitted by the Department, districts may subsequently edit some of the information using the online management system or add new students for the CBT system. Students who were not included in the PreID files that are taking paper tests will not be loaded into the PreID system, and PreID labels are not sent for new students taking paper tests.

7.5.3 Scanning/Editing PBTs and Extracting CBT Records

Scanning and editing requirements in this section refer to the PBTs. The contractor's CBT system must be capable of creating a file with each student's information and the exact responses entered by each student, including the fill-in response and performance tasks, character by character before editing, similar to the scan files described in this section for the PBTs. The reply should include a description of how the scanning and editing procedures in this section will be completed, as well as a description of the types of CBT extract files that will be available for the Department prior to the creation of the scored files described in the next section of this ITN.

1. For each administration, the test administration manuals describe in detail the test materials provided to districts and schools and the procedures for returning the materials and completing information in the CBT system. The contractor will establish procedures to verify that the district and school staff completed these procedures correctly. The contractor will work with the Department and districts if any anomalies are found and make corrections as necessary. This includes mistakes made by districts such as returning to-be-scored answer documents to the wrong site or miscoding a school number on a document.

2. The reply should include a description of where the answer documents will be scanned, the types of scanners to be used and their capacity during the time this project will be scored, general editing and proofing procedures of documents scanned, the types of documents and procedures the contractor proposes to ensure that the correct number of answer documents have been received and scanned to be scored. In the past districts packaged to-be-scored answer documents with a Document Count Form (DCF header) on top of documents of the same type. Alternate methods to ensure that the correct number of answer documents is scanned from each school may be proposed. See Section 7.4.1 for more information on the return of materials.

3. The contractor will provide the Department with scan files for the PBTs and the extract files from the CBT system prior to creating the scored files. The contractor will draft layouts for these scan and extract files and incorporate changes as requested by the Department. The Department will specify the fields in the file, valid values for the fields, and the contents of each file (e.g., by grade or by subject).

4. The contractor will provide two versions of each scan file. The original scan file contains the exact information as scanned and the second, the edited scan file, contains the final information from the scanning system incorporating any edits made as described in the Scoring and Reporting Specifications. For example, if the student wrote her name on the top of the answer document, but did not grid the bubbles on the document, the original scan file would have a blank in the name field and the edited scan file would have the name as entered by the contractor based on the hand-written name. The edit rules are designed to ensure a student will receive the correct report during the initial wave of reporting. The reply should include a description of how the edits would be made to original scan file data to ensure accurate and timely reporting of results. If necessary, the contractor will update the edited scan files to ensure the correct information is transferred to the first version of the State Student Results file (SSR).

5. If any pages with responses cannot be scanned, all responses key entered into the system must be checked by a qualified person other than the person who initially key entered the responses.

6. The contractor will maintain edit logs that indicate why records on scan files were edited and by whom. The logs will indicate the names of anyone who key entered or verified responses.

7. The contractor will provide the original scan files and the edited scan files before scored files are created. See Section 7.5.6 for more information on the steps for verifying data and file delivery. If any edits were not made correctly, the contractor will update the edit files.

   See Section 7.6.2.2 for information on the records that must be scanned or extracted prior to the beginning of the psychometric tasks. The contractor's psychometric and scoring/reporting staff must coordinate schedules and activities to ensure that all files are transferred as expected (times, names, layouts, etc.).

7.5.4 Scoring

The basic types of scored files created by the contractor and history files used and maintained by the contractor are described in this section. The contractor drafts detailed layouts for each file and then incorporates changes requested by the Department.

7.5.4.1 Types of Scored Files

From the PBT edited scan files and the CBT extract files, scored files are created. Scored files that contain data for students throughout the state are called State Student Results (**SSR**) files. These files contain information from the scan and extract files, information from the students' pre-identification labels when used, students' scores, and additional information regarding item (test question) data and scoring. The districts are also provided a truncated version of the SSR with just their students' data, but no item data. This file is called the District Student Results (**DSR**) file.

1. Before the full-state SSRs are prepared, the psychometric staff (Department and contractor), begin their calibration and equating activities with a subset of the state records. These files are called **calibration SSRs**. Initially they only contain the raw score data, then after the calibration and equating, they are completed with the other derived scores as specified by the layout. See Section 7.6.0 for more information on the calibration, equating, and scaling procedures. Coordination of the details for the transfer of these files from scoring/reporting staff and psychometric staff is crucial to the timely release of reports and files.
2. Aggregated files contain school, district, and state data based on the scores reported on the SSRs. These files contain information that is reported to the schools and districts as well as additional information such as standard deviations of the scores. The files with all the data are called State Aggregated Results **(SAR)** files, and the districts receive a District Aggregated Results **(DAR)** with the data for the state and their schools and district.
3. After the initial release of files and reports, there are up to three waves of **late reporting** for students whose scores were not included in the original release of data, whose records had to be updated, or whose scores are released after suppression. The contractor will generate late reporting SSRs, DSRs, and provide student reports in a manner similar to the initial wave of reporting. SARs and DARs are not created for late reporting.
4. After the last wave of late reporting, the contractor creates and provides **close-out SSRs and DSRs** that contain the final information and scores for that administration.
5. After each summer EOC administration, the contractor will create **annual SSRs, DSRs, SARs, and DARs** by concatenating the SSRs and aggregating data combined for the fall, winter, spring, and summer administrations for the school year for subject tests that require multiple test administrations within a school year. The Department will specify how to handle any anomalies in reporting across administrations (e.g., a school name changed).
6. For each spring close-out SSR and each annual SSR, the Department inserts demographic information from its Survey 3 membership file of student data and aggregates the data for approximately 50 demographic groups. The Department will provide these Demographic SSRs and SARs to the contractor. From these files, the contractor will create the Demographic DSRs and DARs and post these files to the online management system for district-level access.
7. The contractor posts most files to the online management system, but may also be required to provide some files to the districts on CD/DVDs. See Table 7.5.5 for additional information.

7.5.4.2 Types of History Files

Three types of history files may be used for this project. The Department will provide the contractor with the layouts and necessary history files to begin the project, and then the contractor will maintain the files and update the files and layouts as instructed by the Department.

1. One type of history file may be used for the ELA/L Retake. Depending on policy decisions regarding scoring, the **ELA/L Retake** history file may be called the **Alternate Passing Score** (APS) **file** and would provide information on students who were grandfathered into a lower passing scale score requirement. Students who take the first administration of the Grade 10 ELA/L before standards are set may be grandfathered into a lower passing cut score than set for other students. If this occurs, for each administration, the contractor will use this file to determine if a student is eligible for the APS and will update the records for students who test. The Scoring and Reporting Specifications will detail the matching criteria.
2. The second type of history file will be used for the Algebra 1, Geometry, and Algebra 2 EOC Assessments for FDOE verification of the testing status (Retaker vs. First-time Tester) of each participating student. This kind of **history file** provides information for students beginning with the first time the subject test is administered statewide. Each administration, the contractor will use these files to determine if a student is a first-time tester or a retaker. The Scoring and Reporting Specifications will detail the matching criteria and process for using these files. Some aggregated data are based on first-time testers only, so the accuracy of the first-time status for each student is very important.
3. A third type of history file will be used to track scores across grade levels for the Grades 3-11 ELA/L and Grades 3-8 Mathematics students. Starting with the first ELA/L and Mathematics administration, the contractor will begin maintaining a file with student data for Grades 3 – 10 ELA/L and Grades 3 – 8 Mathematics, called the **ELA/L and Mathematics History File**. Scores for up to 7 administrations will be added to this file using the closeout files for each administration. The contractor will update the file after each administration and will provide it to FDOE at the end of the contract. The Scoring and Reporting Specifications will detail the matching criteria and process for using these files.

The contractor will update these history files each administration and provide a copy to the Department.

7.5.4.3 Types of Scores and Codes on the SSR/DSRs

1. The scoring process begins with the **Test Maps** that are created by the contractor when a test form is created. The Test Maps are used to identify item placement in the test book and other information about the item. The Test Maps include information regarding which items are core items and field test items, which responses are correct, and the category used for subscores within each content area.
2. If the Test Map or a core item is determined to have a flaw, the Department may choose not to include an item in the students' scores. The contractor must have procedures to provide the flexibility to edit the Test Map information during the scoring process, if necessary.
3. Excluding field test item data, **subject raw scores** and **raw subscores** are then generated by the contractor.
4. See Section 7.6.1 for information regarding the calculation of **scale scores** (SS) by the contractor.
5. Once the SS are determined, the score is classified in one of the **Achievement Levels** (AL) by the contractor.
6. Florida statute requires that passing scores be set for all grades and subjects. The contractor will report the scores as specified by the Department.
7. The **ELA/L Retake** may have two (2) cut scores for passing, depending on policy decisions that will be made prior to spring 2014. If so, the contractor will first determine if the student is

on the APS file described in this section and then determine the **passing status** for each student.

8. For each special school, there is a defined **School Type** number that is used to determine which reports are prepared for a school and whether the results are included in district and state aggregated data. For example, home schools are school type 10, and they are not included in aggregated results within a district.
9. Scores are not reported for some answer documents (e.g., students who did not answer enough questions to have a score reported). The student **Score Status Flag** determines whether the student scores are reported and aggregated. The Scoring and Reporting Specifications provide details on these codes.
10. Many codes are related to each other and all values must be internally consistent. For example, the School Type Codes and the ESE Primary Exceptionality codes are used to determine the **Curriculum Group** and the **Standard Curriculum Codes**. The **Ethnicity Code** and the **Race Codes** are used to generate the **Report Race Code**. Students who use large print and Braille documents must have specific Primary Exceptionality Codes and accommodation codes that must be checked and updated by the contractor if necessary.
11. Numerous other codes (approximately 15-20 for each subject) are provided on the SSRs. These types of codes may change occasionally based on changes in the assessment program and needs of the schools and districts. The contractor must be flexible in modifying the codes and including additional codes as needed to aid in the accurate and timely reporting of useful results.
12. After the scores and codes are verified by the contractor, the first version of the full-state State Student Results (SSR) file is provided to the Department. The contractor will verify that the data were properly transferred from the corresponding edited scan file, that all scores, flags, and codes were set correctly, and that all fields contain valid values as defined by the layout. See Section 7.5.6 for additional information on the steps for verifying mock data, early district return data, and state data.

7.5.4.4 Handling Special Print Documents

1. This project includes Large Print, Braille, and One-Item-Per-Page **(LP, BRL, and OIPP)** special print test materials. The contractor is responsible for numerous tasks to prepare the special print documents for scoring and reporting. The scores for students using these materials are included in the initial release of reports.
2. The Scoring and Reporting Specifications will include the steps the contractor follows from the time these materials are unpacked until the scores are reported. If any to-be-scored answer documents are not packaged correctly, the contractor is responsible for properly preparing the materials or contacting the district if necessary.
3. The contractor is responsible for the transcription of the responses from the LP book to the regular print book according to guidelines provided by the Department. The contractor may suggest ways to complete this process using the CBT system to expedite the scoring process.
4. The contractor is responsible for transcribing Braille answer documents to regular print or into the CBT system. If a student uses an OIPP document, the contractor is responsible for the transcription of the responses from the OIPP book to the regular print book according to guidelines provided by the Department. Transcription services may be subcontracted, but all transcriptions must be completed in time to report the students' results in the initial reporting. This process must be carefully monitored and transcription must be double checked by a person other than the person who initially transcribed the responses.

5. The contractor will create a Special Document Tracking Log to inventory and track the processing of all special print documents. The contractor and the Department will determine the format of the log to track the answer document information and times for the log to be provided to the Department.

7.5.4.5 Handscoring

Handscoring refers to the processes necessary for determining the rating of a student's response on the writing prompts or on the performance-based tasks in ELA/L and Mathematics that respondents may propose. Both paper-based and computer-based tests will contain performance tasks, and so the Contractor must have the capability to score both hand-written and key-entered student responses. The Department requires handscoring processes that are reliable and valid, as well as efficient in terms of time and expenditures. This section describes procedural, design, and implementation requirements for scoring student writing and performance tasks. Respondents may propose other processes and procedures that accomplish the tasks in an equally reliable and valid manner, and are at least as efficient as those outlined below. The final processes will be agreed upon during the negotiation phase. See Appendix J for more details regarding handscoring.

1. Students' constructed responses should be scored by trained readers using imaging technology. Respondents should provide a detailed explanation of the system that will be used.
2. Respondents should also provide a detailed description of how the security of the test items and student responses will be maintained throughout the handscoring process.
3. Trained professional readers will score written answers using criteria established by the Department in coordination with the contractor. Readers must have a college degree and must qualify to score Florida student responses by accurately scoring a series of training and qualifying papers. The readers must be monitored carefully and continuously throughout scoring for their accuracy (validity) and reliability (inter-rater agreement). In addition, team leaders must "read behind" each reader to determine the accuracy of their scoring. Readers must also be periodically given papers that have been previously scored to determine the accuracy of their scoring (validity responses). Quality control metrics will be established by the Department after contract execution. Student responses for constructed-response items in ELA/L tests in grades 3 and 10 and for Algebra 1 will be scored by at least two scorers (100% second read). For all other ELA/L and Mathematics performance tasks, responses will be scored by one reader, with twenty percent (20%) of these papers having a second reader. For these papers that are read a second time, if the two (2) readers' scores do not match, a formal resolution process will be established in order to obtain exact or adjacent scores for quality control purposes only.
4. Handscoring may be done at the contractor's established scoring site(s). Respondents may also propose solutions that include distributed scoring. The scoring sites must be secure facilities that employ procedures and technology to control access and maintain the security of materials. Access to the sites must be limited to full and part-time employees and authorized visitors. Secure materials must be accounted for, and computers containing secure materials must be secured from unauthorized access or copying of files.
5. The contractor should incorporate the following requirements into written handscoring specifications prior to scoring. The handscoring specifications will be a detailed guide to conducting handscoring that will be used by the contractor's handscoring managers and the Department. Draft handscoring specifications must be delivered by the contractor for review and approval at least three (3) months before the first test administration. The handscoring specifications should include the following:

a. Handscoring schedules.

b. Site requirements (includes security and access during scoring).

c. Scoring design (includes expected number of reads; groupings of items assigned to readers; assignment of first and second reads).

d. Personnel (includes minimum requirements, such as education and experience, for scoring directors, team leaders, readers; number of personnel; security agreements).

e. Rangefinding meetings (includes staffing, meeting procedures).

f. Rangefinder review meetings (includes staffing; meeting procedures).

g. Training and qualifying materials (includes listing/description of required materials; annotations for training and qualifying rounds; review and approval process).

h. Validity sets (includes number and type of validity responses; transcription).

i. Scorer degree verification procedures.

j. Training procedures.

k. Qualifying standards required of scorers before live scoring of student work.

l. Handscoring reports (includes listing/description of handscoring reports; distribution).

m. Scoring process (includes administration of validity sets; rules for determining and assigning resolution reads).

n. Monitoring for scorer drift and other sources of scorer inconsistency and retraining (includes read-behind guidelines; use of daily and cumulative reader reports).

o. Processing requirements (includes programming and design requirements for implementing online handscoring of images).

p. Providing electronic copies of annotations used for training materials, calibration, and recalibration of readers,

6. Department staff must be provided on-line access to all handscoring systems and reports and will communicate frequently with the contractor throughout the scoring process. During live scoring daily handscoring status calls must be held between the Department and the contractor.

7. At the end of handscoring, the contractor must produce a report that captures at least the following results for all prompts and performance-based items and tasks that required handscoring:

   a. Item or task ID, the form number, and sequence number

   b. Total number of reads for each item

   c. Inter-Rater Reliability statistics including number and percentage of perfect agreement, number and percentage of adjacent agreement, and number and percentage of non-adjacent agreement

   d. Validity Statistics including the number of validity reads, number and percentage of perfect agreement, number and percentage of adjacent agreement, and number and percentage of non-adjacent agreement

   e. Distribution for scores and nonscorable codes from handscoring

f. The mean, median, modal score, and score variance and standard deviations for scorable responses

g. Final quality-assurance monitoring reports from the handscoring system that include rescoring and retraining rates

h. Scoring notes handscoring.
The handscoring statistical data will be provided in an electronic data file in a format agreed upon by the contractor and the Department.

Provide copies of all materials used in training and recalibration.

8. It is expected that Department staff and Florida educators will be involved in the process to select student responses that will be used in training and qualifying scorers.

7.5.5 Reporting

This section includes requirements for reporting results to students, schools, and districts. This includes the posting of the scored files (DSRs, SARs, and DARs) described in Section 7.5.4, the release of hard copy student reports and PDFs of other reports described in this section, and the creation of files produced for the Department's website.

Although the reports used in the past may be used as a model for these reports, the Department would consider changes to the report design to be more attractive or to present the data more clearly. The reply should include a description of how the respondent will design the reports, sample reports, and any suggestions for improvements to the current models. The report design is reviewed by the Department after each administration. If requested, the selected contractor will make modifications to the design after an administration and prior to the next administration. In addition, if high-level changes (change in Commissioner of Education, significant policy change) occur after designs have been approved; the contractor will make the appropriate modifications to the report design.

If the respondent does not have qualified, professional staff devoted primarily to visual graphic arts and report design, a subcontractor(s) should be identified to provide these design services. The reply should include the names and documentation for the qualified staff or the subcontractors who will provide these design services.

The final report design will take numerous iterations to ensure that all types of scores have been clearly presented. The Department will determine the final colors, design, and content of all reports.

A general description of each type of report is provided below. Most of the reports are designed **by test**, that is, one (1) report form for English Language Arts/Literacy, one (1) for Mathematics, one (1) for each EOC subject test, and one (1) for Retake.

Student Reports

- For each student that tested by test.
- Includes the student's scores (e.g., scale scores, achievement levels, raw subscores, passing status), information about the scores (e.g., passing scores, points possible), and comparison data (e.g., state means).
- Two (2) hard copies (one (1) for parent and one for school) shipped to districts, packaged by school.
- Printed front and back with up to eight (8) colors plus black.
- Some text translated to Spanish and Haitian Creole. The Spanish and Haitian Creole translations on the student reports must be created by someone familiar with the terminology used in Florida's schools and proofed by an independent party, that is, someone not involved in the original translation.
- Delivered with cover memoranda and packing lists following specifications similar to those for distributing test materials.
- Hard copies produced for initial reporting and late reporting waves.

- For ELA/L and Mathematics test, the student report will include historical scores that are up to seven (7) test administrations with a bar graph.
- At all grades/subjects containing performance tasks, each student will receive a report showing his/her response to one performance task in each grade/subject. The report will include a copy of the answer given, the number of points earned on the item, descriptive information about the question, and scores (points earned) earned on all of the performance items.

School Report of Students

- For each school by subject test.
- Includes the scores for all students in the school that tested.
- One (1) PDF by school posted on the online management system for school access for initial reporting only.
- One (1) PDF of all schools in a district posted in the online management system for district access for initial reporting only.
- One (1) color plus black.
- PDFs produced for initial reporting and late reporting wave.
- Reports created for the late reporting wave include only the students with reports in that wave. The reports will denote that they are part of late reporting and the reports will be delivered to districts on CD/DVD.

District Report of Schools

- For each district by test.
- Includes aggregated data for the schools in the district (mean scores, percent passing, etc.).
- One (1) PDF by test by district posted in the online management system for school and district access.
- One (1) color plus black.
- One (1) Excel spreadsheet for all districts and schools by test with the same data as the PDFs for the Department to use for its web postings. This may be a slightly modified version of the PDF without color.
- PDFs produced for initial reporting only.

State Report of Districts

- For each test.
- Includes aggregated data for the districts in the state.
- One (1) PDF by test, posted in the online management system for school and district access.
- One (1) color plus black.
- One (1) Excel spreadsheet by test with the same data as the PDF for the Department to use for its web postings. This may be a slightly modified version of the PDF without color.
- PDFs produced for initial reporting only.

District Summary

- For each subject.
- Includes the aggregated data for each grade level tested in the district and the state.
- One (1) PDF by subject by district posted in the online management system for school and district access.
- One (1) color plus black.
- PDFs produced for initial reporting only.

State Summary

- For each subject.
- Includes the aggregated data for each grade level tested in the state.

- One (1) PDF by subject posted in the online management system for school and district access.
- One (1) color plus black.
- PDFs produced for initial reporting only.

CD/DVD/Jump Drive with Student Report Shipments

- The initial shipment of Student Reports includes a CD, DVD, or jump drive with the DSRs and DARs and their layouts.
- The late reporting shipments include a CD, DVD, or jump drive with the DSRs and layout and the PDFs of the School Reports of Students for the late reporting students.

The Scoring and Reporting Specifications provide specific details on handling special student score flags and school types and the specific information and scores provided on each report.

The packaging and distribution requirements for test materials (see Section 7.4.1) also pertain to the packaging and distribution of the reports.

Table 7.5.5 below shows these reports grouped as they are released to districts and schools.

Table 7.5.5 Results Released to Districts and Schools

Table 7.5.5 Results Released to Districts and Schools			
Results Release Number	**Released To**	**Method of Release**	**Contents of Release**
1	To Districts	Online Management System	District Student Results File (DSR .txt) School Report of Students (PDF of all students in district)
2	To Districts	Online Management System	State Summary (PDF) District Summary (PDF) State Report of Districts (PDF) District Report of Schools (PDF) State Aggregated Results File (SAR .txt) District Aggregated Results File (DAR .txt)
3	To Schools	Online Management System	State Summary (PDF) District Summary (PDF) State Report of Districts (PDF) District Report of Schools (PDF) School Reports of Students (PDF of own school only)
4	To Districts and Schools	Shipments to Districts	Initial Release Student Reports (hard copies) CD/DVD with DSR, SAR, DAR and Layouts
5	To Districts and Schools	Waves of Shipments to Districts	Late Reporting Student Reports (hard copies) Late Reporting School Reports of Students (PDFs on CD/DVD) District Student Results Files (DSR .txt)
6	To Districts and Schools	Shipment to Districts	Writing Images (PDFs on CD/DVD) (spring only)
7	To Districts	Online Management System	Demographic SARs, DARs, and DSRs

7.5.5.1 Initial Reporting Guidelines

The Department coordinates the schedule for the release of data to the public. The contractor must be flexible with the reporting release schedule. The general guidelines are provided in this section. Detailed guidelines are specified in the Scoring and Reporting Specifications.

The basic steps for the initial reporting of full-state data for Department review are listed below. The Department may request slight modifications to these steps.

a. The contractor posts the full-state scan and edit files version A for the Department on the SFTP site.

b. If necessary, the Department provides an issue log for the state scan and edit files.

c. The contractor posts the full-state SSR version A for the Department and any independent checkers specified by the Department (see Section 7.5.6).

d. Contractor provides data and recommendations to the Department based on the review for anomalous scores; the Department will review and identify any data to hold for investigation.

e. If necessary, the Department will provide an issue log for the SSR files.

f. The contractor posts the full-state SSR version B and the SAR version B (no version A)

g. If necessary, the Department will provide an issue log.

h. If necessary, the contractor corrects and reposts SSRs and SARs until approved.

i. The contractor's psychometric and scoring/reporting staff verify the accuracy of the final files.

j. As requested for initial checking, the contractor creates DSRs and DARs and posts on the SFTP site for the Department review and updates as necessary until approved.

k. During this process, the Department will identify a version of the files to be used to check the shipment of student reports and CD/DVDs. The contractor ships a sample of this shipment to the Department to check.

l. If requested, the contractor posts additional samples of district and school PDFs of the reports on the SFTP site.

m. After the PDFs are approved by the Department, the contractor will create all DSRs and DARs and reports on the SFTP site and, for state access only, in the online management system.

n. After Department approval and guidance, the files and reports will be available for districts and schools in the online management system.

o. The student reports and the CD/DVDs will be shipped for delivery by the critical date in the contract.

7.5.5.2 Late Reporting Guidelines

For each administration, various reasons make late reporting necessary. For example, to-be-scored answer documents were sent to the wrong location, updates were made based on the review of documents for graduating students (see Section 7.5.6.5), or the original student report was sent to the wrong school or student.

Immediately after the initial wave of reporting, the contractor begins checking scores of graduating students as specified in Section 7.5.6.5. Any updates will be provided in the first wave of late reporting.

The contractor will prepare for up to three waves of late reporting. The contractor and the Department check the late reporting files in a manner similar to the initial reporting wave.

Depending on the administration and number of inquiries from districts, the Department will determine the late reporting schedule. The contractor must be prepared to adhere to a rigid late reporting schedule to resolve any issues with reporting for one administration before the next administration begins.

The late reporting shipments include the following reports and files.

- Student Reports – two (2) hard copies as in initial reporting with a note or footnote denoting it is a late report.
- CD/DVD with DSR and layout (no DAR)
- CD/DVD of School Report of Students (not in the online management system) with a note or footnote denoting it is a late report.

After the initial release of data, the Department opens a website called the Score Inquiry System for district staff to inquire about missing reports or to ask for a student's score to be reviewed. This system is designed so the contractor and the Department can communicate requests to search for a student's answer document or report, or to review a student's score. Maintenance of this system is the responsibility of the Department.

The contractor must search for missing answer documents in the not-to-be scored materials if requested by the district to find any documents that were mislabeled or returned incorrectly.

7.5.5.3 Close-Out and Annual Reporting Guidelines

After the last wave of late reporting, the contactor creates close-out SSRs for each administration. These SSRs contain the final records for all student with erroneous records removed. For example, if the district/school number was incorrect in the initial reporting and corrected in late reporting, the close-out SSR contains the corrected record. The incorrect record is removed.

The close-out files are provided to the Department for review and approval, but they are not posted for districts.

After the summer EOC close-out files have been approved, the contractor creates annual SSRs following guidelines provided by the Department for tests that require multiple administrations within a school year. These annual SSRs contain the records for students from each administration that school year. A few fields may be slightly altered from the close-out files for each administration, for example, if a school name changes during the school year, the name will be updated so the SAR shows annual aggregated data for that school using the correct name.

7.5.5.4 Demographic Reporting Guidelines

After the spring close-out SSRs are approved by the Department, the Department inserts demographic information from its Survey 3 membership file of student data and aggregates these data for approximately 50 demographic groups. The Department then returns the Demographic SSR and SAR to the contractor to create Demographic DSRs and DARs.

After the Demographic SARs are created and approved, the contractor also creates Excel spreadsheets with the data that can be used for the Department's interactive demographic websites, which can be viewed here for reference:

https://app1.fldoe.org/fcatdemographics/ and

http://app1.fldoe.org/FEocDemographics/MainMenu.aspx.

The Department will specify the format for the spreadsheets.

After the annual SSRs and SARs are created for the subjects that require the multiple test administrations within a school year, this same process is completed for those files.

7.5.6 Verifying Data

Due to the tight timelines and quantity of data, all initial scoring and reporting processes are checked with **mock data** prior to the administration. Then, once actual data are available, a small sample of answer documents are used to begin checking, called **early district return** data. After all answer documents have been scanned, the files and reports are checked for completeness, accuracy, and possible irregularities (cheating) as described in this section. The verification process may require numerous iterations of the files to ensure that each student's scores are accurately reported.

The reply should include a description of the procedures to be used to verify the accuracy of data as outlined in this section. This includes the staffing necessary to complete the mock data process before the administration begins and the verification of each version of the files given the tight time constraints.

The Department may have **independent contractors** assist in a review of the procedures used in this project and verification of the files and reports. Currently the Department has contracts with two independent parties for this purpose. One (1) contractor is primarily concerned with reviewing the procedures and the specifications for the scanning, scoring, and reporting with an emphasis on the psychometric aspects and primarily coordinating with the psychometric staff. The other contractor is primarily concerned with ensuring the procedures are followed, verifying codes and scores on the scan files, the SSRs/DSRs, the SAR/DARs, the Student Reports, and the PDFs of the other reports coordinating with the scoring and reporting staff.

The contractor will be responsible for coordinating with the Department's independent contractors for the review. This may include touring the scanning site and discussions with the contractor's scanning, scoring, psychometric, and reporting staff. During the psychometric activities, the independent contractors may participate in the meetings and discussions, and during the scoring activities, the contractor may be asked to provide a portion of the reports and files to the independent contractors when reports and files are provided to the Department.

7.5.6.1 Checking Mock Data

1. All mock data files, reports, and procedures are generated and delivered using methods as close as possible to the same way final files will be generated and delivered. This process begins with mock PreID files, mock PreID labels, mock PreID Frequency Reports, mock history files, and mock answer documents, and then all headers, files, and reports for the initial wave of reporting are generated using the mock data. The mock student reports are packed and shipped as specified by the Department with the media containing the DSR and DAR, and the mock files and PDFs of reports are also posted to the SFTP site for the Department review.
2. Actual school information from the MSID file will be used in the mock data process to check the processing of the special school types and special districts.
3. Mock data cases may be generated using different methods. To check scanning of PBTs, some mock cases must be **manually gridded**, but others may be **auto-gridded** (preslugged) documents. Some CBT data must be generated by the contractor staff **simulating the processes that a CBT student** would use for each form of each test. To have enough cases to check all scoring and aggregating rules without using too many paper answer documents and time entering CBT responses, some additional cases may be **computer generated**, meaning for PBTs physical documents are never gridded or scanned for those cases and, for CBTs no one sat at the computer and key entered the responses in the same manner as a student enters the responses.
4. For PBTs, only the cases to check erasures must be manually gridded and other references in this section to cases with gridding may be auto-gridded.

5. For each CBT, the PBT accommodated form must also be checked. Large Print and Braille paper documents are not used for mock processing; however the regular print answer documents and the headers are created with the appropriate Large Print and Braille codes.

6. The Scoring and Reporting Specifications indicate the various cases that must be included in the mock data. To easily check that all values scanned on PBTs and key entered on CBTs are properly recorded on the files, the mock data will include cases to check the values using specific patterns (e.g., alternating A,B,C,D,A,B,C,D responses). **Cases must be included to be sure that each value on the SSR, SARs, and reports are accurate.** This includes processing erasures, multigrids, demographic values, score flag codes, school type values, scores, etc.

7. The contractor must design the mock data files to check all procedures through the release of results. To reduce the amount of time to review these data and iterations required, the contractor will complete their review of all mock cases, possible values of codes and scores, and all reports before providing the data to the Department. The reply should include a description of how the respondent will complete these mock data, mock files, and mock reports prior to the first day of testing for each administration.

7.5.6.2 Checking Early District Return Data

1. To begin the verification of actual (live) data, the Department will identify some districts to be processed first, called **Early Districts**. The contractor will arrange for the pickup of answer documents from these districts so they will be scanned first for Department review. The CBT records for students in these districts will be extracted and provided to the Department for review.

2. The selected contractor must anticipate that the spring scan check will be completed at the contractor's scanning site. The scan check for other administrations may be conducted at the contractor's scanning site or at the Department. If the scan checking is performed at the Department, the contractor will post PDFs on the SFTP site of the headers and answer documents or ship the required documents to the Department to complete the checking.

3. For the on-site review of answer documents, the contractor will provide the Department the original scan and the edited scan files at least three (3) business days prior to the on-site review.

4. The contractor will pay travel expenses for up to five (5) Department staff from Tallahassee to the contractor's scanning site to complete this checking. These expenses must be included in the reimbursable funds described in Section 7.7.9.

5. During the on-site review, the contractor will provide computers to Department staff with the following:
   - Access to the CBTs, access to email, access to a high-speed printer, and, if requested, SAS.
   - Easy access to the answer documents. Batches and stacks will be logically sequenced with the headers used.
   - LP, Braille, and OIPP documents and updated Special Document Tracking logs.
   - Key Entry verification logs (e.g., double entry of responses if document is unscannable)

6. The Department's independent contractors may participate in this review or they may visit the site prior to this review.

7. Depending on the Department staff availability, the on-site review may be completed during one week or in two consecutive weeks.

8. The reply may include additional and alternate methods to aid in meeting the data verification and reporting requirements in the time allowed.

7.5.6.3. Checking Data for Anomalous Scores

Before data are released to the public, the contractor must review the student and school scores for anomalous data, that is, data that may not be a valid measure of student achievement. The contractor must review the data for testing irregularities, such as a student copying another student's answers or an administrator changing answers.

If the respondent does not have staff to perform these analyses, a subcontractor should be proposed. The Department will approve the subcontractor and final procedures to be followed for this checking.

Anomalous scores would include the following.

- Students in the same testing group have similar response patterns
- A student has an excessive number of erasures from wrong answers to right answers
- Students in a testing group have an excessive number of erasures from wrong to right answers
- There was an unusual increase in school performance from a comparable administration

The guidelines and procedures used to perform the anomalous score checking will be refined by the Department with the contractor's assistance.

If an irregularity is found in the data, the Department may request for the contractor to hold (i.e., not release) some data. This is handled using the Score Status Flags between the first and second versions of the full-state SSRs. **Schedules must be set to allow time for this review and updating before the initial reporting for each administration.**

7.5.6.4. Checking Full-State Data – Initial Reporting

1. The contractor will verify that all files and all PDFs of reports have been produced according to the Scoring and Reporting Specifications before providing them to the Department. In addition to the checks described in this section, the contractor's psychometric staff must also approve the final SSRs and SARs before final reports are generated and data are released to the public.
2. The verification begins by checking that the DCFs have been completed properly so student reports will be sent to the correct school. If the school identified on the header is different from the school on the student's answer document, and both are active schools, the contractor must identify the correct school for the student by contacting the district, if necessary.
3. The contractor will compare the edited scan files to the SSR and then the SSR to the SAR, and compare reports to the SSR and SAR to be sure all information (scores, codes, school numbers, etc.) is accurate and flowing through the systems correctly before submitting to the Department for review. The contractor will verify that all scores, flags, and codes were set correctly, and all fields contain valid values as defined by the layout.
4. The contractor will compare the final number of students tested in each school to the number of students on the PreID files to identify any anomalies, such as a missing box. To ensure all answer documents have been received for scoring prior to the delivery of the first scan file to the Department, the contractor will review the numbers of records and contact the Department and districts, using guidelines defined in the Scoring and Reporting Specifications, of any concerns. The contractor will assist districts in returning any materials that were not handled properly.

5. As specified by the Department, the contractor will also provide sample shipments including the student reports and the CD/DVDs with files simulating the shipments to districts. The Department will determine which districts shipments will be included in this verification to ensure that a variety of reports are checked. They may be different from the districts selected for early scan if those records are not diverse. As described earlier in this section, the contractor may also be requested to send some reports to the Department's independent contractor.

6. Before the files and reports are available in the online management system, the contractor and the Department will verify that the correct reports and files are available for district and school users prior to the release of the data. The contractor will provide documentation to show that the correct files and reports are being released as specified in the reporting schedule.

   See Section 7.5.5 for more information on the reports.

7.5.6.5 Checking Graduating Student Scores (Manual Rescore)

Due to the high stakes of the tests for graduating students, the contractor must perform additional checks for graduating students who test on paper for Grade 10 ELA/L and for Algebra 1. The checks must be completed so any updates may be included in the first wave of late reporting.

1. For the tests required for graduation, the contractor must identify student in each grade who failed **by 5 or fewer Scale Score points or 15 Developmental Scale Score points** for Manual Rescoring. If there is an APS cut score established for the assessment, the APS cut score must be used for selecting the students.

2. For each of these students, the contractor will review each answer for the subject failed and verify that the items have been scored as the student intended. For example, the contractor will look for unintentional stray marks in the answer bubbles that do not appear to be an intentional grid, will confirm the hand written name on the document is the same as on the PreID label if one (1) is used, and will also confirm that no incomplete erasures in the gridded-response columns were recorded as a mark (e.g., double gridding because of incomplete erasure). The item responses will be compared to the values on the SSR for any irregularities in editing or processing.

3. If any editing, scanning, or processing irregularities are detected, or if an incomplete erasure would change an item response, the student's paper must be rescored with the updated response(s), and a new SS must be calculated to determine the passing status of the student. **If the student passes**, the record must be updated for the first wave of late reporting. If not, no change is made in the record.

4. A new student report will be generated and shipped to the district and the student will be included on the School Report of Students sent with the other late reporting wave 1 student data, if any.

5. The contractor will provide the Department with the number of answer documents reviewed by subject and the number that will have a Passing Status changed to Y when the new files are submitted.

6. This process will be completed within sixty (60) days of the original release of scores for the administration.

7.5.6.6 Checking Late Reports

The contractor and the Department check the late files, reports, and CD/DVDs in a manner similar to the initial files and reports, although the files and reports produced are slightly different. The Department checks the files and reports after the contractor.

See Section 7.5.5.2 for information on the procedures for the late reporting waves.

7.5.6.7 Checking Close-Out and Annual EOC Files

The contractor checks the close-out files by comparing each to the files previously generated for the administration to ensure that records reported to the incorrect schools have been removed and any scores or information for students have been updated or added as necessary.

The contractor will ensure that there are not erroneous duplicate records caused by the multiple waves of reporting on the close-out files. The contractor must review the Late Reporting issue logs to ensure erroneous records have been removed from these files. The Department checks the files and reports after the contractor.

The contractor checks the annual EOC files similar to the initial files, ensuring that the first-time/retaker status codes are properly set. The Department checks the files and reports after the contractor.

7.5.6.8 Checking Demographic Files

Each spring the contractor will check the Demographic SSRs created by the Department to verify that no records or scores were changed; only Survey 3 data will have been inserted. The contractor will verify that only valid values are in the Survey 3 fields before creating the Demographic SARs.

The contractor will check the Demographic DSRs, SARs, and DARs prior to release in a manner similar to the initial release of the files. The Demographic Excel spreadsheets must also be checked by the contractor to be sure they contain the same information as on the SAR. The Department checks the files and reports after the contractor.

See Section 7.5.5.4 for information on the procedures for the demographic files.

7.6.0 Scaling, Equating, Scoring, and Special Psychometric Studies

During the timeframe of this ITN, the contractor will be responsible for drawing samples from the populations of students, for calibrating field-test items, for constructing the new test forms for the future administrations, and for Scaling, Equating, and Scoring (SES) of the assessment system. The system is complex and requires the contractor to provide knowledgeable and experienced staff, including psychometricians and programmers.

Other than the annual regular psychometric operations, such as sampling, test construction, and SES for the assessment system, the contractor will conduct a set of special psychometric studies for these assessments, described in Section 7.6.3.6. The contractor will also cooperate to conduct another set of psychometric studies as Florida transitions from FCAT 2.0 and EOC Assessments to the Florida Standards Assessments (FSA) systems. As the Department transitions to the FSA, the contractor will assist the Department in the establishment of FCAT 2.0 and EOC equivalent score scales, appropriately calibrate items in the new assessments, properly combine performance indicators, construct meaningful score scales, possibly establish vertical scales for ELA/L and Mathematics assessments, assist in defining achievement level descriptors, build cut scores with criterion-referenced meaning on the new scales, link the performance of Florida's students to the scales of other assessments to make comparisons, and conduct other special analyses that may be required by the Department or required for a peer review under the federal Elementary Secondary Education Act (ESEA) program. This section of the ITN provides descriptions of related services and products and the expected quality assurance steps that must be employed to ensure that all tested students receive assessment results that are valid, reliable, and accurate.

Florida uses a Technical Advisory Committee (TAC) composed of selected Florida District Coordinators of Assessment and selected experts from around the nation representing the areas of measurement and statistics, students with disabilities, English language learners, and related alternate assessments. The TAC members listen to issues and offer guidance on implementation of Florida's assessment program. Currently Florida's TAC meets twice a year – in March and in November. The contractor is responsible for convening and conducting these meetings.

The contractor may utilize proprietary software for any of the annual regular psychometric activities or the special psychometric studies for the assessment system during the transition to the FSA, but is required to provide this software for use by all relevant staff, including the Department and any subcontractors. Whatever software is selected must be able to handle the large number of test cases, including large calibration samples, and also accommodate full-state calibration with numbers of records in excess of 200,000 at a time.

The contractor will be responsible for assembling a psychometric team to support work performed under this contract consisting of the contractor's psychometricians and programmers, and **at least one (1) outside entity subcontracted to participate in all SES activities** to independently perform these particular operations and verify all results. The Department's psychometric team consists of two psychometricians plus three graduate interns pursuing their doctorate in educational measurement to be part of the team replicating all SES activities and overseeing the entire process.

A separate procurement is being issued for the FCAT 2.0 and Florida EOC Assessments for subjects not covered as part of this ITN (Science, Social Studies, etc.). The contractor selected as part of this ITN process should anticipate coordinating with the contractor from the FCAT 2.0/Florida EOC Assessments procurement for some of the tasks described in this scope of work.

7.6.1 Assessments

7.6.1.1 Florida Standards Summative Assessments (Scaling, Equating, and Scoring)

1. The contractor will develop and maintain test construction specifications describing the details of test construction, including content and psychometric guidelines for building equivalent forms. Item selection will be based on matching target test characteristics, test information functions, and standard error curves in addition to meeting other content and psychometric requirements, plus further constraints.

2. For the scaling of items, the Department prefers to use a three-parameter logistic Item Response Theory (IRT) model for multiple choice items, two-parameter logistic IRT model for gridded-response items, and two-parameter generalized partial credit model for constructed-response items. For the equating of the tests to their base year scales, the Department prefers to employ test characteristic curve equating using the Stocking & Lord procedure and triangulating the equating with IRT based other equating procedures, such as Haebera, Mean/Mean, and Mean/Sigma. For scaling student performance, the Department prefers to use Maximum Likelihood Estimation to score examinee response patterns. For dimensionality, the Department supports using a variety of item types measuring various student skills on the Florida Standards, but maintains validity for a single dimension. However, these are just the Department's preferences for scaling, equating, scoring, and dimensionality. The contractor must conduct thorough research studies and collect empirical evidence to determine whether these options are psychometrically defensible, whether items measuring various constructs can be combined into a single assessment instrument and scored, and whether the preferred options can be implemented operationally to obtain assessment results that are valid, reliable, and accurate. If research and empirical evidence(s) suggest the use of a different set of techniques in scaling, equating, and scoring of the assessments, the respondent should provide a detailed description of the measurement models proposed for use in calibration, equating method for creating interchangeable scale scores, and scoring algorithm for placing examinees onto a score scale. The contractor will be responsible for designing sampling plans, drawing the samples from populations of examinees, and supplying the data files to the scaling and equating team described in Section 7.6.2.1 so that the required analyses can be performed in a timely manner. The contractor will be responsible for calibrating the tests, placing item parameter estimates onto the base year's scale, and providing the final scaled item parameters for the purpose of scoring. After the Department approves the final scaled item parameters, the contractor will score student responses, the

entity subcontracted to participate in all SES activities will independently verify the scale scores, and the Department's psychometric team will replicate and verify the scale scores.

3. For the Assessments in Algebra 1, Algebra 2, and Geometry, the contractor must construct multiple forms of these assessments by following content and psychometric requirements as indicated in the test construction specifications. As for the scaling, equating, and scoring process for these assessments, the Department desires to follow the same process as indicated in the previous paragraph, but since there are multiple forms of the assessments at this time, the Department prefers to concurrently calibrate these forms so that all item parameter estimates can first be placed onto a common scale, and then, equating these item parameter estimates to the base year scale via anchor items. In other words, equivalency of the multiple forms of new tests is verified through a concurrent calibration, plus post-equating via common items between the item bank and the new test forms. However, as indicated earlier, the contractor must show evidence that the Department's preferences are psychometrically defensible and operationally feasible. The respondent may include in the reply a different proposal for scaling, equating, and scoring of these assessments to obtain assessment results that are valid, reliable, and accurate. Also, when multiple forms of these assessments are being created, the contractor must construct the new test forms that are sufficiently different in an effort to discourage cheating and to ensure a valid measure of student learning. In addition, the department will consider the use of pre-equated forms for administrations other than the spring administration.

4. Because every effort is made to develop items and construct tests according to universal design principles, we anticipate all Braille versions of the assessments will contain the same items as the regular version of the tests. If they do not contain the same items, the contractor will develop a separate scoring process to be approved by the Department and used by the contractor and subcontractor.

7.6.1.2 Retake Assessments (Scaling, Equating, and Scoring)

The contractor's content and psychometric teams will work together with the Department's content and psychometric teams to select retake test forms, which may consist of a previously-used intact form, or another proposed design that yields a test of similar difficulty to the operational form. The inclusion of performance tasks in the retake form may be proposed, however, consideration will also be given to forms that do not include performance tasks.

The contractor will administer the selected test form and will score student responses. The entity subcontracted to participate in all SES activities must independently verify the scale scores generated by the contractor. The same procedure will be repeated to select different forms for subsequent years.

7.6.2 Scaling, Equating, and Scoring (Psychometrics)

1. The contractor will construct Scaling, Equating, and Scoring (SES) specifications for the assessments. The specifications will describe the specific steps for implementing the scaling, equating, and scoring requirements and will explain how, by when, and by whom all of the necessary steps will be completed and verified. The specifications will also address the steps, procedures, and software required for replication of the scaling, equating, and scoring procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration. The Department will provide the contractor with copies of existing specification documents.

2. Before operational SES activities start, the contractor and other members of scaling and equating team must conduct dry-run SES activities on mock data files to make sure all operations laid out in the SES specifications can be successfully executed during the operational SES process. For this purpose, the contractor will prepare "mock" data for the assessments using the State Student Results file (SSR), as

indicated in Section 7.5.6.1. The purpose of this mock data will be to provide a vehicle for the SES dry run; i.e., a practice check of the operation of computer programs used in scaling, equating, creating adjusted item parameters, and scoring. The psychometric staff for the identified calibration team will be available for daily discussions and consultation throughout the parallel dry-run calibration activities.

3. It is the responsibility of the contractor to keep all the documents/electronic files from the scaling, equating, and scoring activities, such as the classical and IRT item statistics, alternative equating solutions summarizing the reasons why anchor items are removed or kept in the anchor set, the impact of decisions on the transformation coefficients and scale scores, and the other pertinent decisions made by the Department. The format of these documents must be proposed by the contractor and mutually agreed upon by the contractor and the Department.

4. The SES specifications must include how the contractor's subcontractor will independently verify the scaling, equating, and scoring operations. For the entire SES process, the contractor will provide all of the resources, including software, staff support, and data files to permit parallel calibration, equating, and scoring of data during the same time period that contractor are producing the scaled item parameter estimates.

7.6.2.1 Scaling and Equating Team

The contractor will assist the Department in coordinating the work of the scaling and equating team during dry-run activities and regular administrations each spring. The contractor is required to subcontract with at least one outside entity to work on the scaling and equating team during all SES activities. The contractor's, the subcontractor's, and the Department's psychometric staff will each independently perform SES tasks to verify results. The specifications will clearly describe the scaling and equating team consisting of the Department's, the contractor's, and third party's psychometricians and programmers, as well as the roles assigned to each entity. The Department's psychometric team will oversee the entire SES process. Respondents should indicate in their replies the qualified personnel/subcontractors who will provide these professional services and include their vitae or other documentation of expertise and experience.

7.6.2.2 Selection of Calibration Samples

Anchor, core, and field-test items are calibrated on representative samples. Thus, the contractor is responsible for designing sampling plans and drawing the representative samples from the respective populations, which will include at least 65% of the respective population, including approximately 90% of Miami-Dade. The contractor will also plan in a way so that a representative set of approximately 5,000 students take anchor and field-tests forms. The contractor's sampling specifications must include analyzing the most recent SSR files and establishing a road map for gathering the required data proven to represent the demographic characteristics of the state and student performance. The specifications will also address the steps, procedures, and software required for replication of the sampling procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration.

Before SES activities start, the contractor must also check and verify the representativeness of the most recent data, and then provide the files to scaling and equating team members so that necessary analyses can be performed in a timely fashion.

The contractor must repeat this process for each assessment administered each spring.

THE REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

7.6.3 Technical Oversight and Special Studies

7.6.3.1 Contractor's Role

The contractor must provide psychometric direction and oversight for all aspects of the assessment programs described in this ITN. The psychometricians assigned to this project must have extensive experience in state assessment programs. The psychometricians will plan, conduct, analyze, and report on test construction, scaling, equating, scoring, and the special studies described in this section.

7.6.3.2 Technical Report

Each year, the contractor will produce a technical report based on an overall analysis of that year's administrations. The technical report will also include a comparison of the characteristics of the current test administration to previous administrations. The technical report will be reviewed by the Department and by the Technical Advisory Committee (TAC) prior to completion of the final copy of the report. The technical report will include a section on field-test administrations. The report will include tabular and graphic displays of data to illustrate the characteristics and quality of test scores. At a minimum, the technical report will include the topics listed below in the **draft** table of contents.

A. DRAFT TECHNICAL REPORT TABLE OF CONTENTS

B. BACKGROUND OF ASSESSMENTS

C. ITEM DEVELOPMENT & TEST CONSTRUCTION

- Item Development
- Item Review
- Field Testing
- Item Statistics
  - Classical Statistics
  - Item Response Theory Statistics: Difficulty, Discrimination, and Guessing
  - Differential Item Functioning (DIF) Statistics
  - Model Fit
  - Local Independence
  - Dimensionality (factor analyses, etc.)
- Test Construction

D. ADMINISTRATION

- Eligibility
- Administration Procedures
- Accommodations
- Test Security
- Data Forensics Program

E. REPORTS

- Appropriate Uses for Scores and Reports
- Reports Provided
- Description of Scores
- Appropriate Score Uses
- Cautions for Score Use

F. PERFORMANCE STANDARDS

- Setting Performance Standards
- Interim Performance Standards

G. SAMPLING

- Rationale
- Procedure
- Representativeness

H. SCALING

- Rationale
- Measurement Models
- Scale Scores
- Scale Drift
- Vertical Scaling
- Checking IRT Assumptions (Model Fit, Local Dependence, Dimensionality, etc.)

I. EQUATING

- Rationale
- Pre-Equating
- Post-Equating
- Development Procedure for Future Forms
- Sources of Error Variances to Score Instability
- Linking Assessments During Transitioning Years
- Linking Assessments to Other Scales for Performance Comparision

J. RELIABILITY

- Estimating Reliability
- Standard Error of Measurement
- Student Classification Accuracy and Consistency
- Reliability for sub groups in the population
- Reliability of year-to-year changes in school means

K. VALIDITY

- Perspectives on Test Validity
- Criterion Validity
- Content and Curricular Validity
- Construct Validity
- Consequential Validity

L. CONSTRUCTED-RESPONSE SCORING

- Scoring Process
- Quality Control
- Handscoring Reliability and Validity
- Rater Effects

M. QUALITY CONTROL PROCEDURES

- Quality Control for Test Construction
- Quality Control for Non-Scannable Documents
- Quality Control in Data Preparation
- Quality Control in Production Control
- Quality Control in Scanning
- Quality Control in Editing and Data Input
- Quality Control for Test Form Equating
- Quality Control in Scoring and Reporting

N. SUMMARY STATISTICS

- Item level statistics
- Test level statistics
- Review and comparision of raw scores, sub-scores, scale scores, distributions for total and sub-populations across years to monitor the trends across years and sub-populations
- Review and comparision of percent proficiency rates across years on different populations
- Frequency distributions of student achievement (all students and by sub-group) across years by grades and subject
- Scale drift indicators
- Correlations of student performance across the various subject areas tested

Following each field test or operational administration, differential item functioning (DIF) analyses, to detect possible item bias, will be conducted, preferably using Mantzel-Haenszel method. DIF analyses are conducted for Caucasian, African-American, and Hispanic racial/ethnic groups and by gender. Values for items resulting from these analyses will be included in the item-banking system. Changes in DIF values across administrations will be analyzed and presented in the Technical Report.

The contractor will provide a detailed item analysis for each test administration and provide the results in the annual Technical Report. There are several item level statistics, such as point-biserial, corrected point-biserial, fit, etc. available in the current item bank. Thus, the contractor is responsible for calculating these statistics following each administration and populating the findings into their respective positions in the bank.

The Department will work with the contractor to determine the contents of the written report. The contractor will provide several printed copies of the report and also an electronic version in the format determined by the Department.

7.6.3.3 Transitioning from FCAT 2.0 and EOC Assessments to Florida Standards Assessments (FSA) – Linking the Scales

As the assessment system transitions to the FSA in spring 2015, the scales of the new FSA will not yet have any meaning attached. Therefore, the Department requires technical assistance from the contractor so that the scales of these assessment systems can be linked through a special and defensible psychometric operation. The contractor will provide a detailed scale linking plan for transitioning from FCAT 2.0 Reading & Mathematics and EOC Algebra 1 & Geometry to FSA.

Linking through a special psychometric operation may go beyond employing a simple linking procedure, since each score unit on the two separate scales may have to be linked to each other so that achievement levels can be determined for student and school accountability purposes. The Department may directly engage additional contractors, or the contractor's subcontractor (if proposed) to triangulate the results.

The plan will include alternative options for linking, how the alternatives will be operationalized, scoring plans, and procedures. The plan should include a comprehensive and detailed timeline for all tasks and events. The plan will be reviewed and vetted by Florida TAC members after submission, and may require revision as a result of this review. This review will address the appropriateness and validity of the psychometric procedure selected for linking, as well as the validity, reliability and defensibility of the linked scores.

The respondent's reply should describe available psychometric methods for establishing interim scores for high-stakes student-level decisions, including an explanation of the defensibility of the proposed methods. During the transition years, as student performance on other assessments will be used to determine the achievement of testing standards, the linking/concordant score studies will be conducted by the contractor and concordant scores will be recommended to the

Department. The contractor selected through this ITN process will be expected to secure external legal opinion regarding the defensibility of the linking method to be employed.

7.6.3.4 Implement Achievement Level Standard Setting Meetings

The contractor is responsible for facilitating the Department's process to establish achievement levels and associated cut scores for the Florida Standards ELA/L, Mathematics, Algebra 1, Algebra 2, and Geometry Assessments; achievement levels, passing scores, retention cut for grade 3 ELA/L, graduation standards for ELA/L, and achievement levels and passing scores for the Algebra 1, Algebra 2, and Geometry Assessments in consultation with Florida educators and citizens.

The contractor will be responsible for developing a Standard Setting Plan for each standard-setting process utilizing IRT item values and appropriate, reliable, valid, and defensible procedures. The Standard Setting Plan will address the nature of the proficiency level standards, methods for determining the standards, and procedures for validating and analyzing the quality of information reported using the achievement levels. In addition to describing the general standard-setting strategy, the Standard Setting Plan will describe in detail how participants will be identified and how the standard-setting procedure will be implemented, such as the materials to be prepared by the contractor, how test forms will be organized, and how the contractor will analyze the data and present impact results.

The contractor will be responsible for organizing and implementing the standard-setting processes, based on the Standard Setting Plans, and for assisting the Department in conducting the standard-setting meetings. Each standard-setting process will involve meetings of standard-setting committees, which will involve Florida teachers and instructional leaders, followed by a reactor meeting involving other Florida education stakeholders. The educator meetings in summer 2015 will result in content-based achievement level descriptions for each grade and recommended cut scores for each test. The Department desires to present proposed cut scores to the State Board of Education in January following each meeting; therefore the final report of activities of each meeting should be available for the Department no later than November following each meeting. The final report of standard setting activities should include in detail process and activities followed during the standard setting, including a description of materials used, statistical background, participants, changing of recommendations through rounds, and participant evaluation of meeting processes.

7.6.3.5 Vertical Scaling

The contractor will be responsible for conducting the vertical scaling for the Florida Standards ELA/L and Mathematics Assessments. This scale provides for reporting growth continuously from grades 3 to 10 in ELA/L and from grades 3 to 8 in Mathematics. In other words, each student's "growth" between adjacent grade levels will be calculated and reported on this scale as a type of "value-added" score.

The contractor's plan for vertical scaling, provided prior to the selection of items and construction of forms for the appropriate administration, should recommend and describe the process of determining hierarchical common content areas across grades, a recommended method for vertical scaling that takes into account potential uses of the scale for NCLB and Florida's accountability system, the data collection procedures, and how and by whom and by when all of the necessary steps will be completed. The vertical scaling plan must be approved by the Department and presented to the Technical Advisory Committee. After vertical scaling studies are conducted, the contractor will prepare a technical report including a description of the process, statistical background, methodology, the recommended scale, and characteristics of the scale. The final report will be presented to the Technical Advisory Committee.

The contractor should anticipate replicating the vertical scaling study three years after the completion of the initial scaling study. This work may occur in the optional renewal period and is contingent on contract renewal.

7.6.3.6 Scaling and Equating Studies

As explained in Sections 7.6.1.1 and 7.6.1.2, the Florida Standards Summative Assessments will be pre-equated during test construction and post-equated after each spring test administration. The retake assessments, such as Grade 10 ELA/L or Algebra 1 Retake will be pre-equated only, consisting of a previously-used intact form, or another proposed design that yields a test of similar difficulty to the operational form. In other words, during the time frame of this ITN, there will be several equating activities to put the new test forms on the same scale through a series of intermediate equating procedures (known as equating chains). In this case, equating error from each of these intermediate equating procedures may accumulate to a point where the comparability of scale scores across time is questioned. For this reason, it is essential for the Department to employ practices that ensure comparable scores across time in the presence of equating chains. The contractor is required to submit a research plan to be conducted in spring 2018 to investigate the extent of scale drift on the assessments. The research plan(s) must be approved by the Technical Advisory Committee and the Department, and the resulting report(s) must be submitted to the Department and presented to the Technical Advisory Committee.

7.6.3.6.1 Investigate the Comparability between Devices Delivering Assessments

EOC Assessments will be administered online and delivered by several different devices throughout the state since school districts are using many different machines when administering the assessments, such as laptops and desktops. The Department prefers to make sure these devices used in delivering the assessments are not providing any advantage or disadvantage to the performance of students. As a result, there is a need to investigate whether there is an impact of certain devices on the assessment results. The contractor must determine the groups of testing devices, based on the types of devices that work with the contractor's platform, whose impact will be investigated, create a plan for the study, present the plan to the Department staff and TAC members, and upon approval from the Department, start investigating any impact on item-level, test form-level, and reported score-level. The results of the study and contractor's recommendations must also be presented to both the Department staff and TAC members.

7.6.3.6.2 Linking Florida Standards Assessments to Other Assessments Measuring the Same Standards

The Department intends to compare Florida student performance on FSA to other students' performance on the same standards from other states, also representing the nation. Thus, contractor must link the scales of Florida Standards Assessments to the scales from other assessments measuring the same standards.

By August of 2015, the contractor will complete a comprehensive curriculum mapping study to determine the degree of overlap between Florida's standards and those in other states in order to determine the degree of alignment. The mapping study results will be analyzed by the Department and contractor's staff to determine if Florida's standards are sufficiently like those of other states to ensure a valid assessment for purposes of reporting comparative information or linked data on Florida Standards Assessments.

Assuming there is adequate alignment, the contractor will work with the Department to design, plan, and conduct a linking study. The contractor's plan for linking should recommend and describe the process of determining the linking methodologies, the data collection procedures, and how and by whom and by when all of the necessary steps will be completed. The linking plan must be approved by the Department and presented to the Technical Advisory Committee. After the linking studies are conducted, the contractor will prepare a technical report including a description of the

process, statistical background and methodology, and characteristics of the scale. The final report will be presented to the Technical Advisory Committee. The contractor will also generate data files with linked scores and prepare reports.

If a linking study requires collecting data from either a common set of students taking both assessments or from different sets of students taking common set of items, the contractor selected through this ITN will be responsible for scoring the test forms administered to students for linking, including scanning/imaging, processing, handscoring, calibration (generation of item statistics), scoring, and production of student results files including linked scaled scores. The scoring will be conducted after the completion of all scoring and reporting for the operational tests given in Florida during spring of 2016. It is anticipated that the results files from the linking study will be provided to the Department by July 2016.

As an outcome of the linking study, the contractor will provide scoring tables displaying how Florida's scale scores are aligned to the ones of other assessments measuring the same standards. Upon first use of these linking tables in reporting the results of the spring 2017 Florida Standards Assessments, the contractor will provide psychometric services to verify the reporting as well as the reliability and validity of the linked scores for spring 2017.

The contractor should anticipate replicating the linking study three years after the completion of the initial linking study. This work may occur in the optional renewal period and is contingent on contract renewal.

7.6.3.6.3 Linking Florida Standards Assessments to International Assessments

The Department intends to compare Florida student performance on Florida Standards Assessments to other students' performance on International Assessments, such as Program for International Student Assessment (PISA) and Trends in International Mathematics and Science Study (TIMSS). Thus, contractor must link the scales of Florida Standards Assessments to the scales from international assessments.

By August 2015, the contractor will develop a study plan for the linking Florida Standards Assessments to International Assessments. The contractor's plan will include, review of the most promising and most feasible methods likely to be used in international linking, discuss the technical feasibility of each method given the nature and design of the Florida Standards Assessments and those of international assessments, such as PISA and TIMSS, propose method(s) for linking the scales of assessments, propose alternative ways for collecting data, explain the process of establishing the linking relationship(s) in detail, and provide a comprehensive and detailed timeline for all tasks and events. The contractor will also share the report with the Department and its TAC members.

Upon approval from the Department, the contractor will finalize the plan for the linking and implement all of the activities. The contractor selected through this ITN will be responsible for scoring the test forms administered to students for linking, including scanning/imaging, processing, handscoring, calibration (generation of item statistics), scoring, and production of student results files including linked scaled scores. The scoring will be conducted after the completion of all scoring and reporting for the operational tests given in Florida during spring of 2016. It is anticipated that the results files from the linking study will be provided to the Department by August 2016.

As an outcome of the linking study, the contractor will provide scoring tables displaying how Florida's scale scores are aligned to the ones of international assessments. Upon first use of these linking tables in reporting the results of the spring 2017 Florida

Standards Assessments, the contractor will provide psychometric services to verify the reporting as well as the reliability and validity of the linked scores for spring 2017.

7.7.0 Program Management

Respondents should provide their overall description of the approach to manage, implement, and support Florida's assessment program that specifically addresses the entire scope of work in this ITN. Respondents should identify and describe all resources available to support all program activities. A management plan for the contract should be incorporated into the respondent's reply. In the event that multiple contracts are awarded, additional program management capacity will be required to coordinate among the other contractors and the Department.

Respondents should designate a Senior Program Manager who will have overall, daily responsibility for all processes and deliverables under the full scope of this program.

The Chief of the Department's Bureau of K-12 Assessment will be assigned as the program manager of the contract resulting from this ITN under the overall supervision of the Director of Assessment, Division of Accountability, Research and Measurement.

7.7.1 Provisions Governing the Work of the Contractor

The procedural requirements identified in this section govern the work of the contractor. This section establishes specific requirements and general principles by which the program will be managed.

The work described in Sections 7.2.0 through 7.6.0 reflects design, development, validation, and implementation requirements of Florida's standards-based testing program. In preparing replies, respondents should consider the following provisions governing the activities required by these sections.

a. All of the processes used by the contractor to complete the work identified in Sections 7.2.0 through 7.7.0 must be approved by the Department. All products must be approved by the Department at milestone stages of development as described in the Production Schedule developed at the beginning of the contract. The Department reserves the right to specify details of tasks and products.

b. Design control of all aspects of this program remains the responsibility of the Department. Changes in the design made after the award of the contract will be at the discretion of the Department.

c. The Department reserves the right to require changes in materials, produced in any medium, at any stage of the program prior to final printing, production, or deployment.

d. Products and processes are modified to some extent for each assessment. For example, modifications may be made to the design, format, or wording of printed and online products from one administration to the next. All such modifications are to be expected as part of the scope of this program and will be at contractor expense. Modifications may also be required for other products and procedures, such as data analyses, file formats, and report designs. Consequently, all printed products developed under this contract are to be only produced in quantities for the particular assessment, unless otherwise specified in writing by the Department.

7.7.2 Contractor Staff and Responsibilities

The work described in the ITN constitutes a large, complex, challenging program that requires year-round activity and close attention to overlapping tasks for different years and the impact on project resources. The contractor is expected to provide a sufficient number of highly-qualified personnel to work closely with the Department to manage the contract. Respondents should carefully consider whether they have sufficient and knowledgeable human resources to complete the work activities of the ITN and should demonstrate in their replies that they have sufficient and knowledgeable human resources to complete program work. Companies should consider bidding only if they are committed to assigning the number and quality of staff and staff time required to complete a program of this magnitude.

The contractor must assign professional staff members who are qualified, experienced, and capable of providing technical assistance to the Department. Please note the following staff requirements:

a. **The contractor will assign *at least* one (1) full-time senior program manager, four (4) full-time project managers, and two (2) full-time administrative assistants.** The full-time senior program manager will concentrate on ensuring quality and timeliness of the full range of services and products required by this ITN. The contractor's management team is expected to lead project and support staff and to manage implementation activities throughout the contract period. Although this section outlines the minimum staffing requirements for this program, the contractor must provide adequate staff to maintain the highest quality products and must deliver these products according to the Department's timelines.

b. It is anticipated that the four (4) full-time project managers will focus on (a) test development, (b) test administration, (c) scoring and reporting, and (d) computer-based testing. Respondents may propose a modification to this project assignment for the managers.

c. Implementing the program requires considerable administrative activities involving the maintenance of schedules, the development of specifications, production of management reports and documents, arrangement of meeting and travel for educators and Department staff, and communication with district and other personnel. Administrative assistants are necessary to serve in a dedicated role as meeting organizers and as direct contacts for the many Florida citizens that may attend assessment meetings throughout the year. The Department requires a single point of contact to discuss each meeting's requirements and venue options and to communicate with participants throughout the travel process, and to address issues that may require late-notice changes in travel plans.

d. The managers should be members of the regular organizational staff with experience within the company or institution in coordinating the types of activities identified by this ITN. In their replies, respondents are expected to demonstrate that the individuals identified as managers have sufficient authority across departments within the organization to ensure that the work of the contract has the necessary priority to be completed with the highest quality and on time.

e. Respondents should include pertinent staffing charts in their replies that show the regular institutional organization staffing and the proposed organization of program staff for this work. **In these charts, the full-time equivalency devoted to work under the contract for each staff member with significant responsibilities will be identified.** Persons proposed to fill all key positions will be identified by name.

f. Respondents should indicate, by name, the professional personnel to be responsible for major contract activities, with an estimation of the amount of time, as a percent of full-time, each person will devote to each task. This information will be included in a separate chart in the management reply. An appendix to the technical reply should contain one (1) page vitae for each of the professional personnel, including subcontractors, to be assigned to the program, indicating relevant educational background and professional experience.

g. In a separate chart(s), respondents should identify the full extent of staff resources to be allocated to the program to conduct activities related to the item and test development; computer-based test system and content support; ancillary materials development; scanning, imaging, data processing, and reporting activities; and scoring, equating, and technical analysis/special studies activities for each year of the program. The chart should identify the major activities by month and the **number of staff by category** and the amount of time in full-time equivalencies (equivalent person-days) assigned to complete the activities.

h. **In addition, the contractor must provide for five (5) contractor staff positions funded through the reimbursable category and described in Section 7.7.9.6.**

7.7.3 Subcontractors

In addition to any subcontractors required in this ITN, the prime contractor may choose to employ one (1) or more additional subcontractors for the completion of these tasks. If the respondent proposes to employ a subcontractor(s), the qualifications and experience of the subcontractor(s) should be documented in the reply **at the same level of detail** as those of the respondent.

The prime contractor will assume responsibility for all services offered in the reply whether or not they are performed or produced by the contractor or by subcontractors. The Department will consider the prime contractor to be the sole point of contact for contractual matters, including payment of any and all charges resulting from the contract.

The respondent should describe how the work of all subcontractors will be monitored and guided to ensure adherence to requirements in this ITN, including resulting specifications and schedules. The contractor will provide for quality assurance activities in oversight of the subcontractor's performance.

A separate chart in the reply should identify all of the subcontractors proposed to be involved in the program, the assessment components they will be involved with, and the specific services they will provide. **Throughout the life of the contract**, any proposed changes in subcontractors must be approved by the Department. The contractor will provide the Department with a qualifications and experience summary for review and consideration for acceptance in advance of a proposed subcontractor's start of work on program processes or deliverables. As part of the Annual Report, all subcontractors, their services, and Departmental approval status will be listed.

A detailed description of the subcontracted services to be provided under the ensuing contract should be included in the reply. All subcontracted services should be documented. Each service (e.g., printing, computer operations, test development, psychometric services, legal counsel, quality control, reporting) should be fully described, including resources, level of service, scheduling, and quality commitments. The respondent should identify the proportion of materials, etc., to be generated by any and all involved subcontractors.

No contractor- or subcontractor-provided work related to customer service or to any secure document or data will be provided by a persons or agencies physically located outside of the United States.

7.7.4 Program Management Communication

Weekly program management conference calls will be conducted at an agreed upon day and time in order to ensure that all requirements and timelines are maintained and to address needs for problem solving and time-sensitive adjustments. The Department may determine periodically that weekly, focused conference calls are required as activities dictate. The contractor will provide a toll-free conference line for all calls between contractor and Department staff required for the effective coordination of the assessment program.

To meet timelines for completing tasks, both the Department and the contractor will need to use secure electronic communications, including, but not limited to, a secure FTP site, a website, a teleconferencing site, etc., provided by the contractor in addition to overnight express delivery of materials as necessary. In addition, the Department and the contractor will need access to a secure site that can be used with districts and with subcontractors to transfer secure materials.

The contractor and the Department may determine that, for selected meetings, video teleconference meetings will be more time and cost efficient than travel to a common meeting site. In this case, the contractor will coordinate all logistics and provisions for the teleconference.

To assist Department staff with communication during on-site visits to the contractor's offices or other work sites, the contractor will provide access to lockable office space, including a telephone with a speaker, a fax machine, and a computer with Internet access and a local printer.

7.7.5 Program Management Meetings

The successful operation of the program will require regular management meetings between the contractor and Department staff. At the Department's request, the management meetings will take place in Tallahassee, the contractor's headquarters or other worksite, or in a location convenient and agreed upon by the contractor and the Department. Contractors should anticipate that the first comprehensive program management meeting will take place at the contractor's headquarters within thirty (30) days of contract execution.

The contractor must expect that up to fifteen (15) of their staff will travel to attend approximately two (2) comprehensive program management meetings per year. The contractor will also send all relevant staff to up to four (4) additional annual management meetings that are project specific, such as the scoring and reporting debrief. All relevant subcontractors must also attend these meetings. The contractor will be responsible for the logistics, facilities, and travel costs of their staff and required subcontractors' staff for all management meetings. These meetings will also involve relevant Department staff. Provisions will be made for electronic participation of any staff member unable to travel to these meetings. In the event that multiple contracts are awarded, the contractor should expect part of the meetings will include all other contractors and Department staff, and that part of the meetings will be reserved for one-on-one meetings between the Department and each contractor to focus on topics and issues specific to each contractor.

The cost reply should include funding specifically for Department staff travel for program management meetings and other oversight activities. Program oversight activities include work related to overall program management, management of key processes, including development, test administration, scanning, handscoring, scoring, programming, printing, and reporting. The contractor will be responsible for paying the cost of travel, lodging, and per diem for up to ten (10) Department staff members to attend up to fifteen (15) trips annually. The cost of the trips has been based on travel between Tallahassee and the contractor's headquarters or between Tallahassee and the contractor's or subcontractor's headquarters, scanning/processing sites, or scoring/handscoring sites. Funds set aside for this purpose are described in Section 7.7.9.5.

7.7.6 Program Management Reports

Five types of reports are to be prepared by the contractor to facilitate and document program management communications with the Department: (1) the Program Schedule, (2) the Weekly Management and Weekly Action Item Reports, (3) a Technical Report, (4) Annual Program Review, including the Operational Addendum, and (5) the Accounting Report. In addition to written reports, the Department may require the contractor's participation in presentations to Department senior management or other entities at places and times determined by the Department.

1. The Program Schedule will be developed for each year of the program and will include both high-level management summary information as well as specific dates associated with critical processes, milestones, and deliverables for individual projects listed in the program management plan. The Program Schedule will be derived from the program management plan at the beginning of each test administration year, and will be updated quarterly. The Department expects submission of the Program Schedule in Microsoft Excel. If significant changes occur between quarterly submissions of the program schedule, the Department may request an updated schedule reflecting the changes at any time.
2. The contractor will provide a Weekly Management and Action Item Report to the Department. A template for this report will be provided to the contractor, and the Department reserves the right to modify the design, format, and content of this report at any time. The Weekly Management Report and Action Item Report will report the status of recent and upcoming tasks, highlighting those leading up to deliverables and critical tasks, report progress on program issues, identify unresolved issues, and maintain a list of requests requiring change orders or amendments. The weekly report will be provided to the Department by no later than noon one day prior to the weekly program management conference calls and will reflect the previous week's work.
3. The contractor will produce a Technical Report and provide the initial draft document to the Department by September 30 of each year of the contract arising from this ITN. The Department will work with the

contractor to identify the specific information to be provided in the Technical Report each year. A proposed report structure is provided in Section 7.6.3.2.

4. The contractor will produce two copies of the Annual Program Review each year to be provided only on CDs/DVDs/jump drives inside plastic sleeves in loose-leaf binders. Along with other materials described below, the Program Review will include a record of the contractor's services and deliverables in response to contractual/ITN requirements. This review must identify major program accomplishments and successes, as well as areas of the program that require changes and improvement in the upcoming year. The review is intended to be a history of program events and to describe recommended improvements or changes for subsequent years. The annual review will be based on information gathered by the contractor's program and project management staff throughout the year. The review will address all aspects of program service and products including management, technology, interpretive products, communications, development, test production, test administration, materials shipping/pickup, scoring, and reporting processes. It will also follow the annual administrative cycle, beginning with fall and ending with the following summer.

   The Annual Program Review will include:
   - details of meetings held with educators (dates, locations, purpose)
   - milestones attained/deliverables completed for each project area
   - problems encountered, root cause analyses, and corrective action(s) taken
   - performance metrics reports as required by the Department noting changes over time

   The Annual Program Review will include electronic files of deliverables and documentation on services required by this ITN, beginning with the fall test administration and ending with the summer test administration. It will include:
   - PDFs of the test and answer books,
   - PDFs of all screenshots for all computer-based test approved forms,
   - PDFs of all passage booklets, reference sheets, large print test books, one-item-per-page test books, large print reference sheets, large print response grid instruction sheets, and CBT work folders,
   - PDFs (untagged and tagged, if applicable) of all interpretive and ancillary products,
   - Native application files of all interpretive and ancillary products,
   - PDFs, or other appropriate file formats such as video, of all other products, including memoranda and report templates,
   - Missing materials and resolution reports,
   - Final Program Schedule reflecting planned vs. actual dates of task completion,
   - Weekly Management and Action Item reports,
   - File Layouts, and
   - Specifications documents.

5. The collected Accounting Reports will provide a summary of the Quarterly Accounting Reports, including expenditures by program task and level of effort as well as expenditures and balances of Reimbursable Funding Categories identified in Section 7.7.9, including balances resulting from executed change orders and contract amendments.

7.7.7 Meetings Involving Florida Educators and Other Citizens

The contractor will be responsible for arranging, organizing, and paying the cost of bringing participants to specific meetings as identified in this ITN. This section identifies points at which meetings with groups of Florida educators and other citizens will be conducted to propose development and/or management guidelines, to draft products, or to review work and products produced by the contractor. The Department will designate Florida educators, and in some instances Florida citizens or consultants from outside the state, to participate in these meetings.

All meetings are facilitated by Department staff unless determined otherwise by the Department. Contractor staff will attend the meetings with Florida educators, as required. The contractor is responsible for on-site meeting organization, support, and management. Generally, the contractor's manager or team leaders for the program area and an administrative assistant responsible for meeting planning will be present at meetings for overall management and support purposes. The contractor will also be expected to send staff appropriate to assist and participate in each meeting. Generally, for all meetings involving separate subject/grade groups, the contractor will provide the appropriate professional staff to take part in each of the separate subject/grade groups. The contractor will be responsible for all expenses associated with contractor staff travel and participation. All expenses must be in accordance with the Department of Financial Services Guidelines for State Expenditures which prohibits the purchase of food and beverages and other unallowable costs. The Guideline may be accessed through the following link: http://www.myfloridacfo.com/aadir/reference_guide/.

The contractor will be responsible for arranging, organizing, attending, and paying travel, lodging and per diem costs required to bring these participants together for the meetings. For meetings to be held in Florida, they will typically be in a central Florida location, a hub city (e.g., Jacksonville), or in Tallahassee.

Table 7.7.1 provides information about the number, expected length, approximate number of participants, and estimated cost of such meetings.

7.7.8 Communication between the Contractor and Districts

Florida has 67 school districts conforming to the boundaries of Florida's 67 counties. Within each school district is a district coordinator of assessment assigned to work directly with the Department to implement statewide assessment programs. All aspects of test administration and reporting are administered within the districts through the district coordinator of assessment. Other district personnel involved in statewide test administration include one testing coordinator per school and the teachers or guidance counselors who serve as test administrators. While there are some testing sites that are not part of the public school system (e.g., private schools), most communication will still be directed through the district coordinator of assessment.

All communication between the contractor and school districts must be directed through or receive prior approval by the Department. Memos required to implement various aspects of the assessment will be prepared by the contractor and approved by the Department prior to release. The contractor will be required to email, mail, or fax memoranda or sets of instructions to district coordinators of assessment as instructed by the Department.

Districts will be instructed to communicate directly with the contractor only for the purpose of clarifying meeting travel logistics, ordering additional testing materials, correcting computer-based system problems, or to report problems with the delivery/pickup of materials. For this purpose, the contractor will dedicate for the use of Florida's district and school personnel a toll-free help desk telephone, operated Monday through Friday 6:00 AM through 8:00 PM, Eastern Time, a toll-free fax number, and a web-based help site available during the same hours cited for the help-desk telephone. This customer service is distinct from that described in Section 7.4.10.

7.7.9 Reimbursable Funding Categories

Six funding categories are designated for specified program functions and may be used only for those functions. Use of these funds requires authorization by the Department contract or program manager or program area leads. Authorization may be provided by specific email or other written communication, or by Department approval of a specific plan for a meeting(s) or activities requiring use of these funds. Amounts are designated for administration tasks. Respondents should include these amounts in their cost replies.

Monies not expended from these funds will be deducted from final contract payment at the conclusion of the contract during contract resolution. The reimbursable fund balances will be reported by the contractor quarterly with each invoice submission in the Accounting Report. The amounts specified in this section may be increased or decreased by an appropriately negotiated amendment at any time during the lifetime of the contract. The Accounting Report will indicate expenditures from, and the balances remaining, in these funds. The final contract invoice will be accompanied by the final balance sheet for these funds. The amounts allocated for these funds should be identified separately in the respondents' cost reply.

7.7.9.1 Consultant Services

The contractor will provide to the Department technical advice and consultant service, as required, from outside the contractor's staff. The contractor will recommend and the Department will select the consultant(s) to be used, who may or may not have been recommended by the contractor. A contract between the consultant and the contractor will be required and will include the amount allocated for honorarium, travel, lodging, and per diem as authorized by the Department. Reimbursement for travel will be at rates authorized by Section 112.061, F. S., for travel and per diem. The respondent should include in the reply the amount of $84,375.00 as a fixed amount for the base contract period and $28,125.00 as a fixed amount for each year of the optional renewal period.

7.7.9.2 Contingency Services

It is possible that unforeseen circumstances will make it either necessary or desirable to perform tasks not specifically anticipated at this time, for example, data analyses beyond those described herein, unexpected data processing, acquisition of additional materials, or programming for test functionality not yet envisioned. These circumstances cannot be defined in advance, and the Department must be able to request such extra services in a timely fashion so as not to impede implementation of the assessments. In the reply, the respondent should include $84,375.00 as a fixed amount for the full term of the base contract period and will include $28,125.00 as a fixed amount for each year of the optional renewal period.

7.7.9.3 Author's Alterations and Design Control

The Department reserves the right to make changes in materials at any stage of the program prior to final production or delivery. Any changes to the Department approved, production-ready product (e.g., digital proofs or final computer-based test files) that are required due to contractor error will be paid for by the contractor. Otherwise, changes made to the Department approved, production-ready product will be paid for as author's alterations. If any alterations are necessary, the Department will identify in writing to the contractor the alterations to be made. In the reply, the respondent should include $84,375.00 as a fixed amount for the full term of the base contract period and will include $28,125.00 as a fixed amount for each year of the optional renewal period.

7.7.9.4 Provision for Meetings with Florida Educators

The respondent will include a fixed amount to cover the costs of travel and per diem for Florida educators, Florida citizens, and others participating in the meetings identified in Section 7.7.7. The contractor will be responsible for the travel reimbursement for participants at rates authorized by Section 112.061, F. S., for travel and per diem. In the reply, the respondent should include $5,491,496.00 as a fixed amount for these meetings with Florida educators during the base contract period and $1,830,498.00 for each year of the optional renewal period.

7.7.9.5 Provision for Meetings with Department Staff

A fixed amount will be included in the reply to cover the costs of travel and per diem for the Department of Education staff or others participating in meetings with the contractor on behalf of the Department. Reimbursement for staff will be at rates authorized by Section 112.061, F.S. These funds will not be used to fund travel and per diem of the contractor's staff. These funds will be expended only with the approval of the Department. In the reply, the respondent should include $438,750.00 as a fixed amount for ten (10) staff members to attend as many as fifteen (15) meetings per year requiring four (4) travel days each during the contract during the base contract period and $146,250.00 for each year of the optional renewal period.

7.7.9.6 Contractor Staff Positions

To improve work flow, work quality, and communications, the contractor will fund salary and benefits for five (5) professional positions to work under the direction of the Bureau of K-12 Assessment within the Florida Department of Education. These positions will be three editors and two Systems Project Consultants. The Department will work closely with the contractor to interview and select individuals who are acceptable to both parties. The contractor will employ its standard recruiting, screening, and hiring procedures to secure individuals to fill these positions. The employees will be full-time employees of the contractor. The employees will receive benefits typically provided to the contractor's employee classification system. The employees will be paid at a rate comparable to similarly skilled and experienced Department employees using the contractor's employee classification system.

The basic duties of the Computer-Based Test Editor (1) and the Materials Editors (2) include: (a) write and edit materials for content, such as items, tests, reports, training materials, brochures, scripts, or on-screen presentations; (b) develop, analyze, and select appropriate information and present it in a form and at a level suitable for the intended audience; (c) review written products and materials for conformity with standards of objectivity, style, and presentation; and, (d) perform a variety of editorial duties related to editorial production. Candidates must possess one (1) year of specialized experience directly related to these duties. Candidates may substitute two (2) full academic years of related graduate level education in lieu of the work experience requirement.

The basic duties of the Systems Project Consultants (2) include: (a) participating in weekly meetings and communicating issues between the FDOE and the contractor's program managers, (b) making suggestions for improvement to the contractor's procedures to aid FDOE staff in data verification activities, (c) assisting FDOE staff debugging SAS computer programs and analyzing data files, (d) traveling, at the contractor's expense, with FDOE staff to check scanning at the contractor's site, (e) assisting in the verification of reports of results using SAS computer programs, (f) assisting in the verification of posting of files and reports on the portal, and (g) communicating issues with District Coordinators of Assessment related to scoring and reporting activities and issues. Candidates must have a thorough understanding of large scale standardized testing programs and data verification techniques. The candidate must also have experience managing data activities such as those required for this project, verifying data files, and using SAS, Excel, and other Microsoft Office products.

The respondent should include in the response $1,800,000.00 as a total amount during the base contract period and $600,000.00 for each year of the optional renewal period.

7.7.10 Final Delivery of Materials

The contractor agrees to deliver to the Department, upon request, all materials and products in all forms that are developed for and used in conjunction with this program, including test books, answer documents (paper and PDF), final electronic source files of interpretive products, software source code, and ancillary materials, PDFs, and electronic files within 30 days following acceptance by the Department of the final report for the program. Payment of the final program

invoice will not be made until all materials and certification of destruction, as appropriate, are received and approved by the Department and final payment resolution is agreed to by both parties.

At the completion of the contract, all data files, including those containing items or graphics, remaining in the possession of the contractor will be destroyed once all handoffs are made to the next contractor. Written verification of destruction will be provided to the Department as part of the final contract report. Destruction will not take place until authorized by the Department.

7.8 DELIVERABLES (See Attached Section 7.8 Deliverables provided in an Excel Spreadsheet.)

SECTION 8 – OPENING, EVALUATION AND AWARD

8.0 REPLY OPENING

TECHNICAL & PRICE REPLIES WILL BE OPENED BY THE DEPARTMENT'S BUREAU OF CONTRACTS, GRANTS AND PROCUREMENT MANAGEMENT SERVICES PERSONNEL AT 325 WEST GAINES STREET, 332 TURLINGTON BUILDING , TALLAHASSEE, FLORIDA, AS SPECIFIED IN SECTION 3.4 CRITICAL EVENT DATES

8.1 REPLY EVALUATION AND NEGOTIATION PROCESS

Using the evaluation criteria specified below, in accordance with Section 287.057, F.S., the Department shall evaluate and rank responsive Replies and, at the Department's sole discretion, proceed to negotiate with one or more Respondent(s) selected, as follows:

A. Selected Respondent(s) will be invited to commence contract negotiations. If necessary, the Department will request revisions to the approach submitted by the selected Respondent(s) until it is satisfied that the contract will serve the Department's needs. The process will continue until a contract is negotiated and executed. The Department may in its sole discretion, award and enter into contracts with more than one Contractor, if in the best interest of the state.

B. The Department reserves the right to negotiate with all responsive and responsible Respondents, serially or concurrently, to determine the best-suited solution. The ranking of Replies indicates the perceived overall benefits of the proposed solution, but the Department retains the discretion to negotiate with other qualified Respondents as deemed appropriate.

C. Before award, the Department reserves the right to seek clarifications, to request Reply revisions, and to request any information deemed necessary for proper evaluation of Replies. Respondents may be requested to make a presentation, provide additional references, provide the opportunity for site visits, etc. The Department reserves the right to require attendance by particular representatives of the Respondent. Any written summary of presentations or demonstrations shall include a list of attendees, a copy of the agenda, and copies of any visuals or handouts, and shall become part of the Respondent's Reply. Failure to provide requested information may result in rejection of the Reply.

D. The focus of the negotiations will be on achieving the solution that provides the best value to the state.

E. In submitting a Reply Respondent agrees to be bound to the terms of this ITN, however, the Department reserves the right to negotiate different terms and related price adjustments if the Department determines that it is in the state's best interest to do so.

F. The Department reserves the right to reject any and all Replies, if the Department determines such action is in the best interest of the state or the Department. The Department reserves the right to negotiate concurrently or separately with competing Respondents. The Department reserves the right to accept portions of a competing Respondent's Reply and merge such portions into one project, including

contracting with the entities offering such portions. The Department reserves the right to waive minor irregularities in Replies.

Criteria for Evaluation

The Department shall evaluate and rank responsive Technical Replies and score them on a scale of 1 to 100 using the following criteria. The Department anticipates awarding the Contract (if any award(s) is made) after negotiations to the responsible and responsive vendor determined to provide the best value to the state.

Each Respondent will receive one score for all criteria, other than price, regardless of the number of assessment components it proposes to deliver. This score will constitute the Total Technical Score for the Respondent. Respondents will also receive a separate price evaluation for each assessment component it submits a price for (A-E in Attachment 1). The Department will add the Total Technical Score for each Respondent to the price evaluation score for an assessment component to determine the total score for the Respondent for that assessment component. Respondents will be ranked for each assessment component in this manner.

The following criteria will be used to evaluate and rank Replies.

A)	Executive Summary	N / A
B)	Qualifications and Experience	10 points
C)	Technical Plan	50 points
D)	Management Plan	15 points
	Total	**75 points**
E)	Price	25 points
	Total	**25 points**

Price analysis is conducted through the comparison of Price Replies submitted. The Department shall score responsive Price Replies up to 25 points using the below.

Price analysis is conducted through the comparison of Price Replies submitted.

The method of awarding points for the Price Reply will be done in accordance with the provisions of Section 287.0572, F.S., which requires use of the present value methodology. The present value discount rate will be used in the computations and evaluation. To determine that discount rate, use the rates identified in Release H.15, Select Interest Rates (Weekly), available online at http://www.federalreserve.gov/releases/h15/. Use the most recent copy of the Federal Reserve Bulletin published at the time of issuance of the ITN. See the "Critical Event Dates" for the release date.

The maximum points will be awarded to the lowest acceptable Price Reply. Replies with higher costs will receive the fraction of the maximum points proportional to the ratio of the lowest Price Reply to the higher Price Reply. The fractional value of points to be assigned will be rounded to one decimal place. The criteria for price evaluation shall be based upon the following formula:

(Low Price/Respondent's Price) x Price Points = Respondent's Awarded Points

The total maximum number of points that can be earned in the evaluation process is 100 points.

8.2 EVALUATIONS

The ITN is designed to assess the most points to the Respondent presenting the best solution for the required services. The Evaluation Committee will consider only those Replies provided after the preliminary administrative review (See **SECTION 6.2.1**) first completed by the Department's Bureau of Contracts, Grants and Procurement Management Services.

Each member of the Evaluation Committee will be provided a copy of each Technical Reply. Replies will be evaluated on the criteria established in the section above entitled "Criteria for Evaluation" in order to assure

that Replies are uniformly rated. The Evaluation Committee will assign points, utilizing the technical evaluation criteria identified herein and the Procurement Office will complete a technical summary.

The Department reserves the right to request oral presentations/seek clarification on any Reply submitted. Information requested and received will be evaluated by the Committee based on the criteria established in **SECTION 6.2.2** above. During this stage Respondents will be asked to provide any clarifications needed by the Evaluation Committee to assist in evaluating their Reply. Information received in this stage will be added to the Respondent's Reply and evaluated as a part of the appropriate section above.

8.3 POSTING OF INTENDED AWARD

The intended award will be posted in the Bureau of Contracts, Grants and Procurement Management Services, 325 West Gaines Street, 332 Turlington Building, Tallahassee, Florida and on the VBS and will remain posted for a period of seventy-two (72) hours. (See **SECTION 3.4 CRITICAL EVENT DATES**.)

8.3.1 Protest of Intended Award

Any Respondent who is adversely affected by the Department's recommended award or intended decision must file a written "Intent to Protest" with the Department at the address of posting. See **SECTION 4.4 PROCUREMENT PROTESTS/NOTICE OF RIGHTS** for protest information.

8.3.2 Inability to Post

If the Department is unable to post as defined above, the Department will post a public notice on the VBS. The Department will provide written notification of any future posting in a timely manner.

8.4 AWARD OF THE CONTRACT

Services will be authorized to begin when the Contractor receives a fully executed contract from the Department's Contract Administrator.

APPENDIX A:
TRANSITION TO COMPUTER-BASED TESTING AND ADDITIONAL TEST ADMINISTRATION DATES

All high school and End-of-Course assessments are currently computer-based assessments and are anticipated to remain as such. Grade 11 English Language Arts/Literacy and Algebra 2 End-of-Course Assessments will be implemented as computer-based assessments.

Table A.1: Transition to FSA Computer-Based Tests in Florida
Grades 3-8: ELA/L and Mathematics

Grade	Subject	2013-2014	2014-2015	2015-2016	2016-2017	2017-2018
3	ELA/L	PBT	PBT	PBT	PBT	Transition to CBT
	Mathematics	PBT	PBT	PBT	Transition to CBT	CBT
4	ELA/L	PBT	PBT	Transition to CBT	CBT	CBT
	Mathematics	PBT	PBT	PBT	Transition to CBT	CBT
5	ELA/L	PBT	Transition to CBT	CBT	CBT	CBT
	Mathematics	CBT	CBT	CBT	CBT	CBT
6	ELA/L	CBT	CBT	CBT	CBT	CBT
	Mathematics	Transition to CBT	CBT	CBT	CBT	CBT
7	ELA/L	CBT	CBT	CBT	CBT	CBT
	Mathematics	PBT	Transition to CBT	CBT	CBT	CBT
8	ELA/L	Transition to CBT	CBT	CBT	CBT	CBT
	Mathematics	PBT	PBT	Transition to CBT	CBT	CBT

Key

CBT = Was computer-based test in prior year

Transition to CBT = First year of computer-based test in this grade/ content

PBT = Administered as a paper-based test

The following dates are for reference only and refer to assessments that are not included as part of this ITN. Dates for the assessments that are included in this ITN are provided in Table 7.2.2.

Table A.2: Additional Administration Dates for FCAT 2.0 and Florida EOC Assessments (Assessments not included in this ITN)							
	FCAT 2.0			Florida End-of-Course Assessments (U.S. History, Civics, Biology 1, Algebra 1 Retake, Geometry Retake)

[1] Optional Renewal Period							

APPENDIX B
CRITICAL AND EXTREMELY CRITICAL ACTIVITIES

Final dates for these activities and a final activities list will be determined in the negotiation process of this ITN and included in the final contract. The table below describes the critical and extra critical tasks, the frequency for distribution, and any notes about the approximate delivery dates. Failure to provide these materials by the agreed-upon dates will be cause for the assessment of liquidated damages.

Task Activity	Critical (C) or Extra Critical (XC)	Frequency	Delivery Notes (Approximations)	ITN Ref.
Delivery of practice tests and sample test materials to districts.	C	Varies by deliverable	By November/December for assessments that are introduced in the spring, regular sample tests (PDF or computer-based) are delivered the initial year of the assessment or the first year of a format change (i.e., transition from paper-based to computer-based). Special format print materials (e.g., Braille, large print) are delivered upon request each year.	7.3.7.5, 7.4.9.6
Delivery of the printed End-of-Course test administration manuals and ancillary materials to districts for the paper-based and computer-based administrations.	C	Prior to each fall administration (see note in 7.4.1 regarding the possibility of 2 manuals for 2014-15 school year)	Usually 70 calendar days before each administration.	7.4.1
Delivery of the printed ELA/L and Mathematics test administration manuals and ancillary materials to districts for the paper-based and computer-based administrations.	C	Prior to each spring administration	Usually 70 calendar days before each administration.	7.4.1
Delivery of the printed ELA/L Retake test administration manuals and ancillary	C	Prior to each fall administration (beginning	Usually 70 calendar days before each administration.	7.4.1

Task Activity	Critical (C) or Extra Critical (XC)	Frequency	Delivery Notes (Approximations)	ITN Ref.
materials to districts for the paper-based and computer-based administrations.		in fall 2015)		
Delivery of the printed test materials to districts.	XC	Prior to each administration.	Usually 3 weeks before each administration.	7.4.1
Delivery of the preidentification labels to districts.	XC	Prior to each administration	Usually 3 weeks before each administration.	7.4.1
Delivery of the computer-based tests to districts.	XC	Prior to each administration	The first day of the test administration window, unless the system requires pre-loading the assessments. (At that point, they should be delivered in sufficient time for the schools to load the test prior to the administration.)	7.4.9
Delivery of test results to districts. Results Delivery (RD) details for 1-7 are provided in Table 7.5.5. This includes print and electronic deliveries.	RD1 – XC RD2 – XC RD3 – XC RD4 – XC RD5 – C RD6 – C RD7 – C	After each administration	Varies by results release deliverable. Initial results delivered as early as two weeks after the end of the administration. For EOC administrations: • RD1-RD3 (state, district, and school reports) must be delivered within two weeks of the last day of the administration window, per statute. • RD4 (hard copies of student results) must be delivered within 1 week of RD1-3. • RD5 (late reporting) should be completed within 2 months of RD4. • RD7 (demographic reports) will be delivered in August/September for the previous school year. For ELA/L and Mathematics (Spring):	7.5.5

Task Activity	Critical (C) or Extra Critical (XC)	Frequency	Delivery Notes (Approximations)	ITN Ref.
			• RD1-RD3 (state, district, and school reports) delivered between the end of April and the middle of May. • RD4 (hard copies of student results) must be delivered before the week of June 8, per statute. • RD5 (late reporting) should be completed within 3 months of RD4. • RD6 (writing image media) is usually delivered mid-July. • RD7 (demographic reports) will be delivered in August/September for the previous school year.	

APPENDIX C
FLORIDA PUBLIC SCHOOL STUDENT PARTICIPATION ESTIMATES, DISTRICT NUMBERS, AND SPECIAL DISTRICT/SCHOOL NUMBERS

STUDENT PARTICIPATION ESTIMATES

Table C.1 indicates the anticipated number of students that would be tested in each grade-level test administration. The number of students expected to participate in ELA/L Retake administrations (Table C.2) will be calculated as a percentage of the grade 10 population.

Table C.3 indicates the expected test takers for each EOC Assessment. This calculation assumes 200,000 new students for each spring cohort. (Cohort, for the purposes of this ITN, refers to a group of students that enters grade 9 and is enrolled at the high school for a total of four years.)

Table C.1 Anticipated Number of Students Participating in Assessment Administrations

Table C.1 Anticipated Number of Students Participating in Assessment Administrations									
	Grade 3	Grade 4	Grade 5	Grade 6	Grade 7	Grade 8	Grade 9	Grade 10	Grade 11
2013-14	212,774	201,371	198,642	203,053	210,018	211,085	222,533	206,675	198,131

	Summer	144,820	50,196	50,196	245,212
[1] Optional Renewal Period					

DISTRICT NUMBERS AND SPECIAL DISTRICT/SCHOOL NUMBERS

NOTE: The districts/schools participating in each test administration may vary. For example, some administer only the tests required for graduation.

01-Alachua through 67-Washington

68- Florida School for the Deaf and the Blind (FSDB)
- 68-0011 Deaf Elementary School
- 68-0014 Blind Elementary School
- 68-0012 Deaf Middle School
- 68-0015 Blind Middle School
- 68-0013 Deaf High School
- 68-0016 Blind High School
- 68-0019 Career Education and Transition High School

69-0011 Okeechobee Youth Development Center

71- Florida Virtual Schools
- 71-0300 FLVS Full-Time K-8
- 71-0400 FLVS Full-Time 9-12
- 71-0500 FLVS Part-Time 6-8
- 71-0600 FLVS Part-Time 9-12
- 71-0700 FLVS Part-Time K-5

72-75 University Laboratory (Lab) Schools
- 72-0011 A.D. Henderson University School & FAU High School
- 72-0020 FAU/SLCSD Palm Pointe Educational Research School @ Tradition
- 73-0341 Florida State University School (FSUS)
- 73-0351 The Pembroke Pines Florida
- 74-0351 Florida A&M University (FAMU) Developmental Research School
- 75-0391 University of Florida (UF) Lab School
  - P.K. Yonge Developmental Research School

80- State Colleges with Adult High School Programs
- 80-0005 Daytona State College (Volusia)
- 80-0007 Florida State College at Jacksonville (Duval)
- 80-0011 Indian River State College (St. Lucie)
- 80-0020 Pensacola State College (Escambia)
- 80-0025 Seminole State College (Seminole)
- 80-0026 South Florida State College (Highlands)

97 – Office of Independent Education (Florida Tax Credit Scholarship students)

98 – Ahfachkee School

Special Programs (The following special programs are designations within each district. The "XX" is replaced by the two-digit district number.)

- XX-3518 – McKay Scholarship Students
- XX-9998 – Home Education Program Students

APPENDIX D
SAMPLE TEST DESIGN

Table D.1 below is provided as an example of one possible test design that may meet the criteria described in Section 7.3.0. Respondents may propose other designs, and a final design will be discussed in negotiation and agreed upon between the Department and the selected contractor.

Table D.1 Example Testing Sessions – Grades 3-8 and High School

Table D.1 Example Testing Sessions – Grades 3-8 and High School				
Content Area	**Specification**	**Session 1**	**Session 2**	**Session 3**
English Language Arts/Literacy	**Time**	80 minutes	80 minutes	80 minutes
	Item Types	Multiple Choice and Short Constructed Response	Multiple Choice and Short Constructed Response	Extended Writing in Response to Text
Mathematics	**Time**	90 minutes	90 minutes	
	Item Types	Multiple Choice, Gridded/Fill-in Response, Short Constructed Response, and 1-2 Extended Performance Tasks	Multiple Choice, Gridded/Fill-in Response, Short Constructed Response, and 1-2 Extended Performance Tasks	

APPENDIX E
PRODUCT SPECIFICATIONS AND DISTRIBUTION REQUIREMENTS

Appendix E is organized as follows:

Part 1 Operational Test Materials Product Specifications & Distribution Requirements
Part 2 Florida Department of Education PDF Guidelines for Section 508/ADA Documents
Part 3 Ancillary Materials Shipment Schedule & Print Quantities

APPENDIX E, Part 1
OPERATIONAL TEST MATERIALS
PRODUCT SPECIFICATIONS AND DISTRIBUTION REQUIREMENTS

Test Documents – General Considerations

The contractor is responsible for producing camera-ready forms of these tests, printing the test documents, and distributing them to school districts. The following requirements apply to all test documents:

- A method to collect demographic information and other special information (e.g., invalidation)
  - Preferred: Scannable document covers include the student demographic grids and other special coding sections.
- A method to track and log secure materials
  - Preferred: Unique security barcode numbers will be printed on each book containing test questions.
- Large Print and Braille (contracted and uncontracted) version of the test. Copies of the regular book (the same form) must accompany the shipment of the large print and Braille materials. Braille notes also accompany the Braille versions.
  - Preferred: One form of each test (usually form 1) is produced in large print (minimum of 18 point type on 14" x 17" approved paper) and in Braille.
- Forms will be spiraled for random distribution.
- Documents will be shrink-wrapped in packs of 5 and 25. Quantities smaller than 25 may be desirable and will be approved by the Department when the document size makes lifting and packing difficult or hazardous.
- Test documents must be high-quality and durable
  - Preferred: Test documents are 8 ½" x 11," saddle stitched or bound; 60# white opaque cougar or approved equivalent paper will be used for answer documents and interior pages of test books.
- Test documents should have high-quality, attractive printing and design
  - Preferred: Covers are printed in one color of ink plus black; Interior pages are printed in one color, some with both scannable and non-scannable ink; Color coding or other identification marks are included on the spine of the documents to identify them when stacked.

Test Documents – Specific Considerations:

1. Grades 3-11 ELA/L Test Documents
   - Up to 40 forms of scannable, sealed test and answer and/or answer documents
   - Number of document types may vary if different portions of a test are in separate documents (e.g., writing folders)
   - 1 Reading Passage Booklet as a CBT test accommodation.
   - 1 standalone CBT Worksheet for each CBT tester.
2. Grades 3-8 Mathematics Documents
   - Up to 40 forms of scannable, sealed test and answer and/or answer documents
   - Number of document types may vary if different portions of a test are in separate documents (e.g., performance tasks)
   - 1 standalone CBT Work Folder for each CBT tester.
   - One standalone reference sheet per student, as applicable

3. Grade 10 ELA/L Retake
    - Preferably, one form of a scannable, sealed test and answer and/or answer document
    - Number of document types may vary if different portions of a test are in separate documents (e.g., performance tasks)
    - 1 Reading Passage Booklet as a CBT test accommodation.
    - 1 standalone CBT Worksheet for each CBT tester.
4. End-of-Course Tests
    - 1 paper accommodation form of the Algebra 1 End-of-Course test and answer book (scannable, with an outside seal).
    - 1 paper accommodation form of the Geometry End-of-Course test and answer book (scannable, with an outside seal).
    - 1 paper accommodation form of the Algebra 2 End-of-Course test and answer book (scannable, with an outside seal).
    - 1 standalone CBT Work Folder for each CBT tester.
    - 1 standalone reference sheet for each Algebra 1, Geometry, and Algebra 2 tester.
5. Other Accommodations
    - 1 large print paper accommodation form for each test
    - 1 Braille form divided into two volumes for each test
    - 1 one-item-per-page accommodation form for each test
6. Accommodation Standalones
    - 1 large print reference standalone sheet to accompany each applicable assessment form
    - 1 large print response grid instructions standalone sheet to accompany each applicable assessment form
    - 6 pages of blank Braille paper to accompany each Braille assessment form
    - 1 large print form of the CBT work folder for each CBT Mathematics assessment
    - 1 large print form of the CBT worksheet for each CBT ELA/L assessment

Shipment Schedule and Print Quantities for ELA/L and Mathematics Assessments

- All test materials are shipped in TM2
- All test documents may contain up to 64 pages
- All grades 3-11 tests will have up to 40 test forms
- Grade 10 ELA/L Retake will have one test form
- Schools will receive one test form (with standalones, as applicable) per preidentified student
- Districts will receive 15% overage of all test materials
- For paper-based administration subjects, 10% extra test material is produced

Shipment Schedule and Print Quantities for EOC Assessments

- All test materials are shipped in TM2
- All test documents may contain up to 64 pages
- Spring EOC tests will have up to 4 unique test forms
- Fall, Winter, and Summer EOC tests will have one test form each
- Schools will receive one test form (with standalones, as applicable) per preidentified student
- Districts will receive 15% overage of all test materials
- For paper-based administration subjects, 10% extra test material is produced

APPENDIX E, Part 2

FLORIDA DEPARTMENT OF EDUCATION
PDF GUIDELINES FOR SECTION 508/ADA DOCUMENTS

The following guidelines may be revised throughout the contract to reflect changes in technology or requirements. The contractor will be notified of any changes, as appropriate.

In order for PDF documents to be posted on the DOE website or any site that is affiliated with the DOE, they must pass the Full Accessibility check without error in Adobe Acrobat 9.0 or X.

DOE uses Adobe Acrobat 9.0 and X to check accessibility of PDF documents. Currently, Adobe Acrobat 8.0 has known issues with the accessibility checker. Although a document may pass the full check, this does not necessarily mean the document is compliant according to DOE Web standards. The following additional checks are required:

1. PDF documents must have the correct reading order. The file must be able to be read by assistive technology in a logical manner. This can be checked in several ways, which include the following items.

   DOE uses at least two of the following to verify reading order:
   a. Saving the file as an accessible .txt file and reading it to be sure it is correct
   b. Using the "reading order tool" in Adobe Acrobat
   c. If proficient using a "screen reader" (not the Adobe Acrobat "read out loud"), listen to the document
   d. Using the Reflow view in Adobe Acrobat
   e. Using the "Order" navigation panel

2. The document must have correct Tab order.
   Tab order refers to how a user can "tab" through the content. The user should be able to tab through the document in the order it is intended to be read. If the tab order is incorrect, the assistive technology user may jump from one page to another and back and not realize it. Another example of incorrect tab order is the practice of structuring tables or columned lists using tabs.

3. The document must have appropriate "alt text" on all images that have meaning. (Alt text means alternative text that appropriately describes the image for an assistive technology user.)
   a. Graphs, charts, flowcharts, etc., cannot simply have the word "graph" in alt text. It must contain enough descriptive information for an unsighted user.
   b. Graphics that do not have meaning need to be tagged as "artifacts" or "backgrounds." If the primary purpose of an image is decoration or if describing an image will take the listener out of the testing experience and serve more as a distraction to the task at hand, then it would fall under this rule. During regular production rounds, TDC content leads will determine which elements will be tagged as background.
   c. Putting a blank space for the "alt text" area of an image in an attempt to get the screen reader to skip it is not acceptable in "most" cases, as a screen reader will still say the word "graphic." Tagging graphics that have no meaning as artifacts or background will cause the screen reader to ignore them.
   d. Graphs and charts need to be described completely to convey the same information to a listener as the sighted user would get. If the graph is explained in detail in the "content text" of the document, you can refer to that content in the alternate text. For example, if right below a pie chart is a paragraph explaining the chart, then the "alt text" on the chart could simply state "Pie Graph which is explained in detail below." This is very helpful if the person converting the file to PDF is not the one who created it.
   e. Alternate text should not be provided on anything except for image tags.
   f. Links are not "clickable" in alternative text; therefore, including links in alternative text should be avoided. Permission must be obtained from the DOE for special circumstances, such as the approach for tagging the Periodic Table of the Elements in Interpretive Products.

4. If the State Seal, or any other image, is in the header and footer of a document, the first occurrence of the header and footer needs to be tagged and readable by a screen reader. All other occurrences should be tagged

as artifacts or backgrounds. This will let the listener know that there is at least one state seal (or other image) present, but does not repeat on every page that it appears. This rule also applies to headers and footers that are repeated on each page of a document. Only new information in the header and footer selections, such as page numbers, should be tagged.

5. Page numbers need to be tagged in such a way that the screen reader reads them. This is helpful in navigating the document.

6. Tables must be tagged as tables, so they are read correctly. A common problem with tables is that they are being tagged as paragraphs.

   Tables and table components will be tagged as such: Table headers will have the <TH> tags, table data will have <TD> tags , and table rows will have <TR> tags. The proper order for tagging a table is as follows: <Table>, <TR>, and <TH>; or <Table>, <TR>, <TD>. The header section of a complex table (i.e, a table with more than one header row) should begin with <THead>, and the body section should begin with <TBody>. To check a table, compare the layout in the normal view against the layout in the View menu and select Reflow. If the layout stays the same and does not shift, the table is properly tagged.

7. Documents greater than 10 pages in length should contain a clickable table of contents, except when it is not feasible. The table of contents should contain the correct tag structure using <TOC> and <TOCI> tags. For documents that contain a table of contents that is not clickable, the table of contents needs to be made into Bookmarks in the PDF and each table of contents listing needs to be made clickable within the table of contents. The Bookmarks Panel should appear on the left side of the screen for documents that do not contain a table of contents but are greater than 10 pages in length. This Bookmarks Panel will act as the document's table of contents. During regular production rounds, TDC content leads will determine which elements in TDC documents will be bookmarked.

   This is needed not only for easy navigation for those using assistive technologies, but it is a convenience to sighted visitors as well, since it allows them to click on an item in the table of contents and be directed immediately to the content of the document to which it refers.

8. Content headings must be tagged as headers and not tagged as paragraphs.

   Headings need to be tagged with <H> tags (or Heading 1 <H1>, Heading 2 <H2>, etc.). This helps the listener know what subject matter is contained beneath the header and allows for easier navigation.

9. Files must be saved (in a reduced file size) to Adobe Acrobat version 7.0 with "Fast Web View" enabled for documents tagged in Adobe Acrobat 9.0 or X. (The DOE has discovered that converting files created in Adobe Acrobat 9.0 to Adobe Acrobat 5.0 increases rather than decreases the file size, and converting files created in Adobe Acrobat X to Adobe Acrobat 6.0 or earlier versions distorts the font in interpretive products, so this should be avoided.) Reducing the file size ensures that users who have older versions of Acrobat are able to access the document. This also decreases the file size for quicker download.

10. Links must be functional.
    a. Hyperlinks must not be broken and must link to the correct page. This includes e-mail addresses that are clickable.
    b. If a link is split between two lines, both lines need to be linked correctly.
    c. Hyperlinks need to be standard, which means in blue font and underlined. This allows for sighted users to quickly locate links within the document.

11. Color should not inhibit the readability of text, and color alone is not to be used to convey meaning. Some assistive technologies do not reproduce colored text, and users who are colorblind often cannot differentiate every color.
    a. If color is used to convey meaning for sighted users, add a symbol in front of the colored items as well. ag this symbol to indicate the meaning of the colored item.

b. Under certain DOE Web Services approved circumstances, the color-coded information may be described using white text that is not viewable to the sighted user. This "invisible" information must be tagged so that it is read prior to the colored text.

12. The following information needs to be noted in the Document Properties:

    Title–Users can set up a screen reader to read the titles instead of the long file names.

    Subject–Specific to the document, and may or may not be the same as the document title.

    Keywords–As with other Web documents, these words are used for search engines and need to be specific to the document's contents.

    Language–(Advanced tab) Specified to indicate the primary language of the document. The individual tag properties need to indicate text within a document that may be of a different language (e.g., paragraph in Spanish needs to specify "Spanish" and paragraph in Haitian Creole needs to specify "French").

    Author–At this time, the DOE is not requiring the inclusion of "Author;" however, if the name of the author is pertinent to the overall document, it is suggested that a name be included.

13. Lists should be tagged correctly and not tagged as text. The correct order options for list tags are as follows: <L>, <LI>, <LBody>; <L>, <LI>, <Lbl>, <LBody>; or <L>, <LI>, <LI_Label><LI_Title>. If lists have lists within list items, they need to be tagged correctly. Always tag multiple-choice answer choices/options as lists. Sample multiple-choice items appear in Sample Test Materials and in Item Specification books.

14. Forms that need to be filled out should contain the appropriate form fields and check boxes so users may fill them out on the Web. Examples of forms should be indicated as such and do not need to contain form fields and check boxes, because they are samples. The answer grids for sample testing materials are not considered forms at this time for feasibility reasons. Form field properties need to be filled out so that the information that needs to be entered into the form fields is clear. (The "Tooltip" in the form's properties is the portion of the tag that is read by the screen reader.) If two form fields have the same "Name" in a document, then both fields will populate when one of them is filled out; therefore, each form field must have a unique name in the form field's properties. When tagging form fields, it is important to check the accuracy of the Tab order (see list item 2).

15. Pages cannot be blank. They must contain some text, such as "Notes" in the header or the disclaimer, "This page is intentionally blank."

16. Pages with content in landscape format should be presented in landscape format, so users may read the content without having to print the page. In other words, the Pearson contractor shall rotate landscaped pages inserted sideways so the content appears right side up to the viewer.

17. Words set in bold, underline, or italics may not be used alone to convey meaning. For example, a word set in italics cannot have a coded meaning such as "italics= story title."

    a. Add a symbol in front of the italicized, bolded, or underlined information, and tag the symbol to indicate the meaning italics, bolding, or underlining should convey.

    b. Under certain DOE Web Services approved circumstances, the italicized, bolded, or underlined information may be described using white text that is not viewable to the sighted user. This "invisible" information must be tagged so that it is read prior to the colored text.

18. No text should be entered in the "Actual Text" field in the Touchup Properties box. If that is done, some readers will only read the actual text and then stop instead of reading the entire document.

Note: DOE PDF accessibility guidelines were initially effective September 11, 2007. They were revised by DOE Web Services to include Adobe Acrobat 9.0 on January 5, 2010, and by DOE Editorial staff on February 17, 2010, for added clarifications and for the purposes of this document. Some DOE staff are now using Adobe Acrobat X, and the Department is currently in the process of officially updating PDF accessibility guidelines to include Adobe Acrobat X (3/27/12).

APPENDIX E, PART 3 – Ancillary Materials Shipment Schedule & Print Quantities

Product	Shipment	Pages	Number of Copies			
			State	District	Schools	Electronic Delivery (508/ADA compliant)
Test Administration Manual	TM1	Up to 400	25	10% overage	1/20 students	Yes
Student PreID Labels (Wave 1)	TM2	N/A	N/A	N/A	1/student	
Student PreID Rosters (Wave 1)	TM2	N/A	N/A	N/A	1 per subject	
Document Count Forms (Preidentified)	TM2	N/A	N/A	N/A	2 per subject/grade	
Document Count Forms (Non-Preidentified)	TM2	N/A	N/A	N/A	5 per subject/grade	
Online Comment Forms	N/A	N/A	N/A	N/A	N/A	Yes
Security Checklist	N/A	variable	0	1	1	Yes
District Packing List	TM1, TM2, TM3	variable	0	1	0	Yes
School Packing List	TM1, TM2, TM3	variable	0	1	1	Yes
District Materials Return Kit	TM2	N/A	1	1	0	
School Materials Return Kit	TM2	N/A	1	0	1	
Return Materials (e.g., envelopes, boxes, special formats)	TM2	N/A	0	As necessary	As necessary	
Bills of Lading		N/A	0	As necessary	As necessary	
Paper Bands	TM2	N/A	10	15% over	1/20 student documents	
Student PreID Labels (Wave 2) (Spring ELA/L and Mathematics only)	TM3	N/A	0	0	1/student (As necessary)	
Student PreID Rosters (Wave 2) (Spring ELA/L and Mathematics only)	TM3	N/A	0	0	1/subject (As necessary)	
Misc. Memoranda		variable		As necessary	As necessary	

APPENDIX F
TEST SECURITY REQUIREMENTS, STATUTE, AND RULE

Chapter 1008.24 of Florida Statutes and Florida State Board of Education Rule 6A-10.042 establish the requirement that Florida Department of Education tests are to be maintained in a secure manner during development, administration, and scoring in order to preserve the integrity of the tests. When not in use, all test materials are to be kept in secure, locked storage. Individuals who have access to secure test materials are not to copy or otherwise reproduce test questions or reveal test questions verbally or in writing. Persons who are involved in administering or proctoring the tests or preparing examinees for the tests are not to participate in, direct, aid, counsel, assist in, or encourage any activity which could result in the inaccurate measurement or reporting of the examinees' achievement. Examinees' answers to questions are not to be interfered with in any way by persons administering or scoring the tests. Persons violating test security requirements are guilty of a first degree misdemeanor, punishable by a fine of not more than $1,000.00 or imprisonment for not more than 90 days, or both.

The security requirements and penalties established by the rule and statute must be provided by the contractor to **each person who has access to tests or test questions** during the development, printing, administration, or scoring of the tests.

A copy of the Statute and Rule is part of this appendix.

Restrictions on Printing for Security Purposes

The prospective contractors should indicate their ability to comply with the following conditions relative to printing of the required tests. These conditions are necessary as a means of maintaining test security. Lack of compliance with these conditions may subject the reply to rejection if the Department determines it is in its best interest to do so.

1. All test negatives and plates must be maintained under lock and key by the printing supervisor.
2. Unauthorized personnel must not be permitted access to the test negatives, plates, or copies.
3. All plates and negatives must be destroyed by the contractor upon completion of this contract.
4. The Department reserves the right to conduct on-site spot checks of the printing processes.
5. All press pull-ins, trim, and waste material must be shredded at the end of each day's press run by a person authorized to do so by the contractor.
6. Each production run must be made under close supervision of the printing supervisor.

THE REMAINDER OF PAGE INTENTIONALLY LEFT BLANK

FLORIDA TEST SECURITY STATUTE

1008.24 Test administration and security.—

(1) A person may not knowingly and willfully violate test security rules adopted by the State Board of Education for mandatory tests administered by or through the State Board of Education or the Commissioner of Education to students, educators, or applicants for certification or administered by school districts pursuant to s. 1008.22, or, with respect to any such test, knowingly and willfully to:

(a) Give examinees access to test questions prior to testing;

(b) Copy, reproduce, or use in any manner inconsistent with test security rules all or any portion of any secure test booklet;

(c) Coach examinees during testing or alter or interfere with examinees' responses in any way;

(d) Make answer keys available to examinees;

(e) Fail to follow security rules for distribution and return of secure test as directed, or fail to account for all secure test materials before, during, and after testing;

(f) Fail to follow test administration directions specified in the test administration manuals; or

(g) Participate in, direct, aid, counsel, assist in, or encourage any of the acts prohibited in this section.

(2) A person who violates this section commits a misdemeanor of the first degree, punishable as provided in s. 775.082 or s. 775.083.

(3) A school district may contract with qualified contractors to administer and proctor statewide standardized assessments required under s. 1008.22 or assessments associated with Florida approved courses under s. 1003.499, as approved by the Department of Education in accordance with rules of the State Board of Education. Assessments may be administered or proctored by qualified contractors at sites that meet criteria established by rules of the State Board of Education and adopted pursuant to ss. 120.536(1) and 120.54 to implement the contracting requirements of this subsection.

(4) (a) A district school superintendent, a president of a public postsecondary educational institution, or a president of a nonpublic postsecondary educational institution shall cooperate with the Commissioner of Education in any investigation concerning the administration of a test administered pursuant to state statute or rule.

(b) The identity of a school or postsecondary educational institution, the personally identifiable information of any personnel of any school district or postsecondary educational institution, or any specific allegations of misconduct obtained or reported pursuant to an investigation conducted by the Department of Education of a testing impropriety are confidential and exempt from s. 119.07(1) and s. 24(a), Art. I of the State Constitution until the conclusion of the investigation or until such time as the investigation ceases to be active. For the purpose of this paragraph, an investigation shall be deemed concluded upon a finding that no impropriety has occurred, upon the conclusion of any resulting preliminary investigation pursuant to s. 1012.796, upon the completion of any resulting investigation by a law enforcement agency, or upon the referral of the matter to an employer who has the authority to take disciplinary action against an individual who is suspected of a testing impropriety. For the purpose of this paragraph, an investigation shall be considered active so long as it is ongoing and there is a reasonable, good faith anticipation that an administrative finding will be made in the foreseeable future. This paragraph is subject to the Open Government Sunset Review Act in accordance with s. 119.15 and shall stand repealed on October 2, 2014, unless reviewed and saved from repeal through reenactment by the Legislature.

(5) Exceptional students with disabilities, as defined in s. 1003.01(3), shall have access to testing sites. The Department of Education and each school district shall adopt policies that are necessary to ensure such access.

History.—s. 370, ch. 2002-387; s. 1, ch. 2009-143; s. 7, ch. 2013-225.

Florida Test Security State Board of Education Rule

6A-10.042 Maintenance of Test Security.

(1) Tests implemented in accordance with the requirements of Sections 1004.93, 1008.22, 1008.29, 1008.30, 1012.55, and 1012.56, Florida Statutes, shall be maintained and administered in a secure manner such that the integrity of the tests shall be preserved.

(a) Test questions shall be preserved in a secure manner by individuals who are developing and validating the tests. Such individuals shall not reveal in any manner, verbally or in writing, the test questions under development.

(b) Tests or individual test questions shall not be revealed, copied, or otherwise reproduced by persons who are involved in the administration, proctoring, or scoring of any test.

(c) Examinees shall not be assisted in answering test questions by any means by persons administering or proctoring the administration of any test.

(d) Examinees' answers to questions shall not be interfered with in any way by persons administering, proctoring, or scoring the examinations.

(e) Examinees shall not be given answer keys by any person.

(f) Persons who are involved in administering or proctoring the tests or persons who teach or otherwise prepare examinees for the tests shall not participate in, direct, aid, counsel, assist in, or encourage any activity which could result in the inaccurate measurement or reporting of the examinees' achievement.

(g) Each person who has access to tests or test questions during the development, printing, administration, or scoring of the tests shall be informed of specifications for maintaining test security, the provisions in statute and rule governing test security, and a description of the penalties for breaches of test security.

(h) During each test administration, school district and institutional test administration coordinators and contractors employing test administrators and proctors shall ensure that required testing procedures are being followed at all test administration sites. Officials from the Department are authorized to conduct unannounced observations of test administration procedures at any test administration site to ensure that testing procedures are being correctly followed.

(2) Test materials, including all test booklets and other materials containing secure test questions, answer keys, and student responses, shall be kept secure and precisely accounted for in accordance with the procedures specified in the examination program administration manuals and other communications provided by the Department. Such procedures shall include but are not limited to the following:

(a) All test materials shall be kept in secure, locked storage prior to and after administration of any test.

(b) All test materials shall be precisely accounted for and written documentation kept by test administrators and proctors for each point at which test materials are distributed and returned.

(c) Any discrepancies noted in the number or serial numbers of testing materials received from contractors shall be reported to the Department by designated institutional or school district personnel prior to the administration of the test.

(d) In the event that test materials are determined to be missing while in the possession of an institution or school district, designated institutional or school district personnel shall investigate the cause of the discrepancy and provide the Department with a report of the investigation within thirty (30) calendar days of the initiation of the investigation. At a minimum, the report shall include the nature of the situation, the time and place of occurrence, and the names of the persons involved in or witness to the occurrence. Officials from the Department are authorized to conduct additional investigations.

(e) In those cases where the responsibility for secure destruction of certain test materials is assigned by the Department to designated institutional or school district personnel, the responsible institutional or school district

representative shall certify in writing that such destruction was accomplished in a secure manner.

(f) In those cases where test materials are permitted by the Department to be maintained in an institution or school district, the test materials shall be maintained in a secure manner as specified in the instructions provided by the Department. Access to the materials shall be limited to the individuals and purposes specified by the Department.

(3) In those situations where an employee of the educational institution, school district, or contractor, or an employee of the Department suspects a student of cheating on a test or suspects other violations of the provisions of this rule, a report shall be made to the department or test support contractor, as specified in the test administration procedures, within ten (10) calendar days. The report shall include a description of the incident, the names of the persons involved in or witness to the incident, and other information as appropriate. Officials from the Department are authorized to conduct additional investigations.

(4) Violations of test security provisions shall be subject to penalties provided in statute and State Board Rules.

Specific Authority 1001.02(1), 1008(24)(1) FS. Law Implemented 1001.02, 1008.24 FS. History–New 7-5-87, Amended 10-26-94.

APPENDIX G
TEST ADMINISTRATION MANUAL WORKFLOW

The production stages for test administration manuals are defined as follows and are first defined for the Department, and then defined for the contractor. This is provided to help the respondent anticipate the level of work required on the review rounds:

Table G.1 Test Administration Manual Workflow for FDOE and Contractor for Developing Florida-specific Standalone Products

Table G.1 Test Administration Manual Workflow for FDOE and Contractor	
Round	**Task**
FDOE Manuscript (MS) Round	Identify which prior administrations' TAMs to use as a starting point for each section of the current manual.
	Identify high-level changes, additions, and omissions to the scripts and other sections to be included.
	Introduce known or potential policy updates.
FDOE Round 1	Verify accuracy of all FDOE policies outlined in TAM; apply content; policy updates, where necessary.
	Review all TAM text by comparing current TAM to most recent and most relevant prior TAM(s); verify that relevant text from each section of the prior TAM is reflected in current TAM.
	Identify any new naming conventions that need to be incorporated (e.g., changing "calculator" to "approved four-function calculator"); note any global edits.
	Verify accuracy of links, email addresses, phone numbers, statutes, dates, and schedules.
	Review instructions in Test Administrator (TA), School Coordinator (SC), and Technology Coordinator (TC) sections to verify consistency (e.g., items packed in DAC box).
	Confirm TAM accurately indicates which ancillaries will be posted; verify file format(s).
	Add queries for contractor program team in green text boxes.
	Include placeholders (text in purple text box) in sections to be addressed at Round 2 (e.g., outstanding policy decisions).
	File clean-up before returning TAM to contractor: Change internal queries from orange to purple. Remove FDOE internal queries where possible.

Round	Task
FDOE Round 2	Confirm that all Round 1 edits have been applied.
	Confirm that queries to contractor from Round 1 have been addressed.
	Replace all placeholders with content.
	For assessments with CBT & PBT TAMs: Review instructions in PBT TAM against instructions in CBT TAM for consistency.
	Compare CBT and/or PBT test form to TAM to ○ Verify accuracy of scripts (incl. electronic practice test scripts), ○ Verify instructions, ○ Verify seal configurations, ○ Verify page references, ○ Verify titles, and ○ Verify tool descriptions.
	Verify session schedule references in scripts (e.g., Session 2, Day 2); verify session length references in script.
	Ensure screen shots and instructions are up-to-date.
	Respond to contractor queries (light blue text boxes); apply checkmarks to approve suggested edits, as needed.
	Ensure that contractor program team checks have been made; include reminders/queries regarding checks that must be performed; schedule conference call/WebEx, if necessary, to discuss questions/concerns regarding Program Team (PT) verification.
	Conduct roundtable read-through, comparing to multiple prior TAMs for consistency.
	Ensure FDOE specialists (e.g., individuals from other offices) verify information (e.g., any updates to students to be tested, any updates to ESE accommodation information)
	File clean-up before returning TAM to contractor: Change internal queries from orange to purple. Remove FDOE internal queries where possible.

Round	Task
FDOE Round 3	Confirm that all Round 2 edits have been applied.
	Confirm that queries to contractor from Round 2 have been addressed.
	Verify contractor program team checks have been performed by appropriate program team members.
	Check TOC, headers, footers, pagination, and internal page references for accuracy.
	Perform a cold read of the entire TAM to identify any final text edits to be made.
	Verify all FPOs (placeholders) have been replaced with accurate, up-to-date graphics.
	Verify checklists and ancillaries in appendices for accuracy and consistency (i.e., that forms are approved versions).
	Review third-party proofreader's queries/suggested edits; apply checkmarks to approve suggested edits or indicate revised text using verbatim text edits in yellow text boxes.
	File clean-up before returning TAM to contractor. Remove FDOE internal queries.

Round	Task
FDOE Final Round	Confirm that all Round 3 edits have been applied.
	Confirm that queries to contractor from Round 3 have been addressed.
	Perform a final visual check of the document.

Round	Task
Contractor Round 1	Draft new TAM using TAM Information Sheet and MS round FDOE markup in previous TAM.
	Communicate with FDOE about edits to be applied based on MS round markup. Identify version(s) of previous TAM from which language has been pulled if not the approved final version (e.g., language in x, y, and z sections of CBT TAM pulled form EOC TAM round 3).
	Include queries to FDOE for sections that require confirmation, revision, or additional information.
	Insert FPO (placeholder) graphics; insert forms/images from contractor P&D program team when available and note the following: ○ Graphics should depict information for the applicable admin, such as correct start date and logical start time. ○ For CBT: Screenshots should be taken using the correct user profile (e.g., CBT Coordinator). ○ Sample students should have age appropriate date-of-birth fields and grade levels should match the administration.
	Perform a clean read of TAM and insert queries where text may need to be updated based on comments at debrief, comment form feedback analysis, call center data, etc.; suggest changes; highlight any tentative revisions for FDOE to accept/reject/revise.
	File clean-up before posting TAM to FDOE: Remove internal queries where possible.

Round	Task
Contractor Round 2	Apply FDOE edits. If an FDOE edit seems incorrect or inappropriate, contact FDOE to inquire. All edits should be applied unless, during contractor's review, FDOE is consulted and agrees to leave out edit.
	Consult appropriate contractor program staff (per Florida Program Team org chart) and acquire approval/sign-off on relevant script, technical, and P&D sections of TAM, including a review of naming conventions for P&D materials.
	Insert FPO (placeholder) graphics; insert forms/images from contractor P&D program team when available and note the following: ○ Graphics should depict information for the applicable admin, such as correct start date and logical start time. ○ For CBT: Screenshots should be taken using the correct user profile (e.g., CBT Coordinator). ○ Sample students should have age appropriate date-of-birth fields and grade levels should match the administration.
	Perform a role play to check operational scripts against currently available test forms/books and verify accuracy of instructions, page references, screen shots, tool descriptions, etc.
	Verify session schedule references in scripts (e.g., Session 2, Day 2); verify session length references in script.
	Verify the online management system instructions by intended user role.
	Verify the online management system and computer-based platform screen shots.
	Verify emails, phone numbers, URLs, dates, and schedules.
	Verify which ancillaries will be posted on the online management system, and in what file format(s) (check against approved ancillaries matrix).
	Perform a clean read and provide queries/suggested additional edits. Suggested edits should be indicated using blue comment boxes for FDOE to approve or reject in the next review round (i.e., should not be incorporated into the body of the TAM prior to FDOE approval and should not be made using yellow text boxes, which could be mistaken for FDOE verbatim edits).
	Indicate content that has and has not yet been verified (e.g., add a text box indicating that school box contents have not yet been verified).
	File clean-up before posting TAM to FDOE: Remove contractor internal queries. Replace FDOE queries, as necessary, and ensure contractor responses are included.

Round	Task
Pearson Round 3	Apply FDOE edits. If an FDOE edit seems incorrect or inappropriate, contact FDOE to inquire. All edits should be applied unless, during contractor's review, FDOE is consulted and agrees to leave out edit.
	Confirm all FPOs have been replaced with updated artwork. ○ Graphics should depict information for the applicable admin, such as correct start date and logical start time. ○ For CBT: Screenshots should be taken using the correct user profile (e.g., CBT Coordinator). ○ Sample students should have age appropriate date-of-birth fields and grade levels should match the administration.
	Verify online management system instructions are accurate and up to date.
	Ensure all program team reviews are complete and that verification is indicated in TAM; where suggested edits arise during PT verification, these edits should be placed in blue comment boxes for FDOE approval prior to incorporation into text.
	Perform final full review of entire TAM for content, formatting, consistency of information and instructions across sections (e.g., TA, SC, and TC have same instructions and understanding of responsibilities).
	Consult appropriate contractor program staff (per Florida Program Team org chart) and acquire approval/sign-off on relevant script, technical, and P&D sections of TAM.
	Verify TOC, headers/footers, pagination, internal page references.
	File clean-up before posting TAM to FDOE: Remove contractor internal queries. Replace FDOE queries, as necessary, and ensure contractor responses are included.

Round	Task
Contractor Final Round	Confirm all edits have been applied.
	Confirm that approved versions of all checklists and ancillaries are being used.
	Perform a final, full clean read.
	File clean-up before posting TAM to FDOE: Remove contractor internal queries. Replace FDOE queries, as necessary, and ensure contractor responses are included.
	Confirm that when the final version is posted to FDOE, no marks or comments are included except where the copyeditor has made an unrequested edit or where FDOE had a query and contractor is providing a response.

APPENDIX H
TEST ACCOMMODATIONS

Test Accommodations for Students with Disabilities (General Information)

As specified in this appendix, accommodations may be provided to students with disabilities enrolled in public schools with current IEPs or Section 504 plans. Care must be taken to provide a student with only the accommodations permitted for that student. In addition, students with disabilities must be provided the opportunity to participate in practice activities for the tests with appropriate allowable accommodations.

Determination of appropriate accommodations in assessment situations for students with disabilities shall be based on the individual needs of each student. Decisions on accommodations shall be made by the IEP or Section 504 team and recorded on the IEP or Section 504 plan. Students with disabilities should be oriented to any test situation through test-taking instruction designed to familiarize them with testing format and procedures. This orientation should take place near the time of testing. Guidelines recommended for making accommodation decisions include:

1. Accommodations should facilitate an accurate demonstration of what the student knows or can do.
2. Accommodations should not provide the student with an unfair advantage or interfere with the validity of a test; accommodations must not change the underlying skills that are being measured by the test.
3. Accommodations must be the same or nearly the same as those needed and used by the student in completing classroom instruction and assessment activities.
4. Accommodations must be necessary for enabling the student to demonstrate knowledge, ability, skill, or mastery.

Students with disabilities who are not currently enrolled in public schools or receiving services through public school programs and require accommodations in order to participate in a test administration may have access to accommodations if the following information is provided:

- Evidence that the student has been found eligible as a student with a disability as defined by s. 1003.01(3) (a), F.S., or Rule 6A-19.001(6), FAC, and
- Documentation that the requested accommodations are regularly used for instruction.

For further information, contact the Bureau of Exceptional Education and Student Services at 850-245-0475 or visit the following website: **www.fldoe.org/ese/fcatasd.asp**.

Computer-Based Accommodations for Students with Disabilities

Students with disabilities may participate in CBT administrations using computer-based accommodations as indicated on their IEPs or Section 504 plans. CBT accommodations may be included in the category of **flexible presentation accommodations** for CBT administrations. They may be provided to students along with other allowable test administration accommodations.

CBT accommodations must be accessible through the computer-based testing platform that will be used for non-accommodated students. Accommodations should be administrator-selectable.

A. Large Print Font

A fixed large print font size (minimum 18-point) that is an enlargement of the regular type is available for students who require it. Computer interface (scrollbar, buttons, cursor/pointer, etc.) is also enlarged accordingly.

B. Color Contrast

Options for variable font color and background color display preselected font and background color combinations on the computer screen. Specific highlighter colors are also provided for students who require them.

The color combinations may include, but are not limited to, the following:

- White Text/Black Background (Blue Tracking; Green Highlighter)
- Black Text/Beige Background (Green Tracking; Yellow Highlighter)

- Black Text/Light Green Background (Yellow Tracking; Orange Highlighter)

Without the use of color contrast, the screen displays the following:

- Black Text/White Background (Blue Tracking; Blue Highlighter)

C. Zoom

Feature allows students to self-select print size and magnification. Zoom levels include: 1x, 1.25x, 1.5x, 1.75x, 2x, 2.25x, 2.5x, 2.75x, 3x, 3.5x, 4x, 5x, 6x, 7x, 8x, 10x. Computer interface (scrollbar, buttons, cursor/pointer, etc.) also zooms accordingly.

D. Screen Reader

The screen reader provides text-to-speech audio presentation of directions, test items, and answer choices. The Department will provide the contractor with screen reader specifications at the beginning of the contract detailing the various requirements and procedures for read-aloud text and technology.

E. Assistive Devices

The assistive devices form allows the use of computer-based assistive devices with no other accommodated features enabled for students who require assistive devices but do not require other accommodated CBT forms.

Paper-Based Accommodations for Students with Disabilities

Students with disabilities may participate in CBT administrations using paper-based accommodations as indicated on their IEPs or Section 504 plans. Paper-based accommodations may be included in the category of **flexible presentation accommodations** for CBT administrations and may be provided to students along with other allowable test administration accommodations.

In order to receive paper-based test materials for any CBT administration, the requirement for a paper-based test **OR** one or more of the following conditions should be documented on a student's IEP or Section 504 plan:

- The student cannot access a computer.
- The student requires an accommodation that cannot be implemented in conjunction with a computer-based administration (e.g., the student requires a specialized setting or uses adaptive furniture that cannot accommodate a computer workstation).
- The student requires an accommodated CBT form that is not available.
- The student has a flexible scheduling/extended time accommodation that requires testing one session over more than one day.
- The student is hospital/homebound.

Other conditions, in addition to those listed above, may be considered by the student's IEP or Section 504 plan team.

A. Regular Print

A regular print paper version of the test may be requested for a student who requires it.

B. Braille

A contracted or uncontracted Braille version may be requested for a student who uses Braille materials. Some test items may be altered in format for Braille versions of the test as authorized by the Department. Test items that have no application for the Braille reader will be deleted as authorized by the Department. Student performance standards that cannot be assessed in the Braille format will be deleted according to the requirements of s. 1008.22, F.S.

C. Large Print

A paper-based large print version of the test may be requested as a unique accommodation for eligible students who are unable to access the computer-based large print or zoom accommodation via the computer-based testing platform.

D. One-Item-Per-Page

One-item-per-page materials may be requested as a unique accommodation for paper-based tests for use by students who require one test item on a page, fewer test items on a page, increased space between test items, or true black-and-white print.

E. Reading Passage Booklet

Eligible students participating in computer-based Reading tests may be provided regular print or large print booklets that contain the reading passages but do not contain the test items. Although Reading Passage Booklets are included in the category of paper-based accommodations, students who require them will test on the computer.

Administration Accommodations for Students with Disabilities

Administration accommodations must be provided as indicated on student IEPs or Section 504 plans. Listed below are allowable administration accommodations for Florida's statewide assessments. Not all allowable accommodations are listed.

A. Flexible Presentation

- Paper-based test materials (regular print, braille, large print) and accommodated computer-based test forms (large print font, color contrast, zoom, screen reader) may be requested for students who require them.
- Oral presentation may be provided for all directions and for items/answer choices other than passages and items/answer choices in Reading tests. Reading passages, items, and answer choices may not be read aloud or presented orally, but must be read by the student through visual or tactile means.
    - Mathematics, science, and history items/answer choices may be read aloud by a test administrator or presented orally via screen reader.
- Signed presentation may be provided for all directions and for items/answer choices other than passages and items/answer choices in Reading tests. Reading passages, items, and answer choices may not be signed, but must be read by the student through visual or tactile means. The test administrator may translate using the same method of sign language that the student regularly uses in the classroom, but must be careful not to use signs that might lead the student to the correct response. In such cases, fingerspelling may be used as an alternative.
- For oral or signed presentation, the test administrator may sign or read aloud directions, items, and answer choices, other than passages and items/answer choices in Reading tests, to the student in the manner that is regularly used in the classroom. Examples of allowable oral/signed presentation include, but are not limited to, reading/signing items to a group of students, reading/signing every item to a student individually, reading/signing items only when a student requests.
- Test directions may be repeated, clarified, or summarized.
- A student may be provided with a copy of directions from the administration script that is read by the test administrator.
- A student may be allowed to demonstrate that he or she understands the directions (e.g., repeating or paraphrasing).
- A student may read aloud test items and answer choices to him/herself. This would require use of a device such as a WhisperPhone®, or would require that the student be tested in a separate setting so that other students are not disturbed.
- Verbal encouragement (e.g., "keep working," "make sure to answer every question") may be used; however, it may not be used to cue a student regarding correct/incorrect responses.
- Students may use magnification devices (e.g., CCTV/video magnifiers, reading loupes, handheld magnifiers). Devices must be used without accessing image-upload features (e.g., devices with a memory card must have the memory card removed during testing).
- A student may use a straightedge to maintain or enhance visual attention to test items.

- Portions of the test may be masked to direct attention to uncovered item(s).
- Colored transparencies/overlays may be used.
- Test books may be secured to a work area if no adhesives are used on scannable documents. If necessary, scannable documents may also be secured with adhesives if responses are transcribed into replacement documents.
- Positioning tools, such as a reading stand, may be used.
- A student may use a highlighter to highlight key words or phrases in directions, passages, test items, and answer choices.

B. Flexible Responding

- The student may use varied methods to respond to the test, including written, signed, and verbal responses. (Written responses may include the use of devices such as the Graphic Aid for Mathematics or the geoboard for students using braille.) A test administrator or proctor may transcribe student responses to the format required by the test. Recorded responses must accurately reflect the response of the student, without addition or enhancement by the test administrator or proctor.
- A student may dictate responses to a proctor.
- A student may use speech-to-text technology to record answers.
- A student may indicate answers to test items using the mouse, keyboard, or assistive technology that uses either device.
- A student may use a computer switch to indicate answers.
- A student may use a computer/alternative keyboard to indicate answers.
- A student may use a pointing device to indicate answers.
- A student may use other communication devices to indicate answers.
- A student may use mathematics grids/guides to organize mathematical computation.
- A student may use special paper such as raised line, shaded line, or color-coded (would require that responses are then transcribed by school/district personnel).
- Test administrators may check periodically to be sure that students are entering answer choices correctly on the computer or marking in the correct spaces in the test book.

C. Flexible Scheduling

- A student may be administered a test during several brief sessions, allowing frequent breaks during the test sessions. Between sessions and during breaks (e.g., restroom breaks, lunch breaks), students must be closely monitored to ensure that they do not share responses or change responses to items that were already completed.
- A student may use a specific time of day for specific sessions.
- A student may be provided extended time to complete a test. Extended time must be provided in accordance with the student's IEP or Section 504 plan. **Extended time is not unlimited time**; it should align with the accommodation used regularly in the student's classroom instruction and assessments. The student is not required to use all of the extended time that is allowed and may end the testing session prior to the expiration of the extended time.
- Other considerations for **Scheduling** accommodations when administering Florida's statewide assessments to students with disabilities include:
- Each test or test session must be completed within one school day. Students who have a flexible scheduling accommodation that allows them to test over more than one day will be required to participate in testing using paper-based test materials.

- For students using paper-based test materials to test over more than one day, the following conditions must be maintained to ensure the validity of the test administration across days:
  - The student may not be permitted to change his or her responses to items that were completed on a previous day.
  - The test administrator must closely supervise the administration of the test on an individual basis to ensure that answers from the previous day are not changed and that the student does not preview parts of the test to be answered the following day.
  - The test administrator must use a paper clip or binder clip to secure the answer documents and prevent the student from reviewing his or her answers from the previous day. ALL CLIPS MUST BE REMOVED AFTER TESTING. Staples or tape should NOT be used on books containing student answers.

D. Flexible Setting

- A student may be administered a test in a familiar place with a test proctor present, and/or a familiar person who has been appropriately trained may administer the test. Procedures for test security must also be followed and precautions taken in order to ensure that the test remains secure.
- A student may be administered a test individually or in a small group setting. A small group should be of a size comparable to the normal instruction group size indicated on the student's IEP or Section 504 plan.
- If a student requires use of an accommodation that may disturb other students, the student should be tested in a separate setting.
- A student may use special lighting.
- A student may use adaptive or special furniture.
- Special acoustics, such as FM systems, may be used to enhance sound or special rooms may be used to decrease auditory distractions.
- The opportunity for movement may be increased or decreased.
- Stimuli may be reduced (e.g., by limiting the number of items around the student's desk or computer station).
- White noise/sound machines or approved music may be used to reduce auditory distractions.

E. Assistive Devices and Tools

- Any student who requires software programs to ensure access to the computer and to approved assistive technology (e.g., switch scanning software, specialized on-screen keyboards, mouse emulators) must be able to use these devices with the computer-based testing platform.
- A student may use varied assistive devices to access the computer (e.g., alternative keyboards, trackballs, joysticks, switch scanning systems, touch screens, mouth sticks, head wands, eye-gaze or head control systems).
- Visual magnification and auditory amplification devices may be used.
- Real coins may be used to represent coins depicted in test items. Coins may not be used as counting devices.
- For students with visual impairments, an abacus and products such as the Graphic Aid for Mathematics, Math Window®, and the geoboard may be used. These devices are approved substitutes for paper and pencil computation.
- Other assistive technology typically used by the student in classroom instruction may be used provided the purpose of the testing is not violated. Implementation of assistive devices must ensure that test responses are the independent work of the student.
- Students who use sign language as their primary means of communication may use an English/sign or sign/English translation dictionary. The dictionary must be similar to one used in the instructional setting

and may not contain definitions of words. The dictionary may contain the sign picture, the word, synonyms, and an index.

- Manipulative materials, including, but not limited to, counters, base-10 blocks, clock faces, or geometric shapes, are not allowed to be used by any student during the test administration.
  - FOR BRAILLE MATERIALS ONLY: While the use of manipulatives is not an allowable accommodation, occasionally an item in a **Braille** test will require the use of manipulatives to give the student a tactile reference. If/when such items occur, test administrators will be provided with the instructions allowing students to use the manipulatives for those specific test items only. This modification is approved by the Department and applies only to students using Braille test materials.

Unique Accommodations

In accordance with Rule 6A-1.0943, FAC, school districts may request unique accommodations for individual students with disabilities. Unique accommodations usually involve alterations of existing test materials. In addition, they must be regularly used by the student for classroom instruction and must not alter the underlying content of the test. Each unique accommodation must be approved by the Commissioner of Education or a designee prior to its use. Written requests for unique accommodations must be submitted by the district assessment coordinator to the Bureau of K-12 Student Assessment at the FDOE. Accommodation requests must be reviewed by district level staff before being sent to the FDOE. In addition, the signatures of both the district exceptional student education (ESE) coordinator and the district assessment coordinator are required.

Administration Accommodations for English Language Learners (ELLs)

Districts are required to offer accommodations to students identified as ELLs. Allowable accommodations for ELLs are listed below. The test may be administered with any one of these modifications or a combination of accommodations that are determined to be appropriate for the particular needs of ELLs. However, all testing, with or without accommodations, must be completed during the prescribed testing dates.

A. Flexible Setting

- ELLs may be offered the opportunity to be tested in a separate room with the English for Speakers of Other Languages (ESOL) or heritage language teacher acting as test administrator. Parents must be informed of this option for students not of legal age and shall be given the opportunity to select the preferred method of test administration.

B. Flexible Scheduling

- ELLs may take a test session during several brief periods within one school day; however, each test or test session must be completed within one school day.
- ELLs may be provided additional time; however, each test or test session must be completed within one school day.

C. Assistance in Heritage Language

- ELLs may be provided limited assistance by an ESOL or heritage language teacher using the student's heritage language for all directions and for items/answer choices other than passages and items/answer choices in Reading tests. This should not be interpreted as permission to provide oral presentation of items/answer choices in English or in the student's heritage language.
  - The ESOL or heritage language teacher may answer student questions about the general test directions in their heritage language. If the test is administered to a group of students, the teacher may answer questions about directions for the benefit of the group. Questions of clarification from individual students must be answered on an individual basis without disturbing other students.
  - **Mathematics, Science, and History items:** The teacher may answer specific questions about a word or phrase that is confusing the student because of limited English proficiency, but is prohibited from giving assistance that will help the student solve problems and answer test items. A student's

questions must not be answered in a way that would lead the student to infer the correct answer to an item.

D. Approved Dictionary

- ELLs must have access to an English-to-heritage language translation dictionary and/or heritage language-to-English translation dictionary, such as those made available to ELLs in an instructional setting. However, a dictionary providing definitions written exclusively in the heritage language or in English may not be provided.

APPENDIX I
DATA PRIVACY & SECURITY POLICY

TABLE OF CONTENTS

I. INTRODUCTION

II. DEFINITIONS

III. PRIVACY OF PERSONAL INFORMATION
- A. Basic Privacy Protections
- B. Access to the Department PII

IV. INFORMATION SECURITY PROGRAM

V. ENFORCEMENT

I. INTRODUCTION

Personally Identifiable Information ("PII") on students, including information on their performance on the assessments and limited demographic information, will be collected by the Contractor. Disclosure of PII to the Department and its contractors is authorized by the Family Educational Rights and Privacy Act ("FERPA") for the purposes of—

(1) Conducting studies, for or on behalf of the Department and Florida's school districts, to develop, validate, and administer predictive tests or to improve instruction (34 CFR 99.31(a)(6)(i)(A) & (C)); and
(2) Assisting in the evaluation of federal- and state-supported education programs and ensuring compliance with federal legal requirements related to such programs – in particular related to state-level assessments and accountability systems (34 CFR 99.31(a)(3) & 99.35).

More specifically, the data will be used by the Department or by one or more of the Department's Contractors—

- to validate, pilot and field test, and improve the assessments;
- to report assessment results back to the Department and Florida school districts in a form that is useful to them;
- to prepare reports on student performance for the Department and Florida school districts, and the public (PII may not be included in public reports or in reports to states or school districts that were not the source of the PII);
- to analyze test results for purposes of accountability, including promotion and graduation decisions for individual students; teacher and school leader evaluations; school accountability determinations; determinations of principal and teacher professional development and support needs; and teaching, learning, and program improvement; and
- to carry out studies designed to improve instruction on behalf of the Department and Florida school districts.

Access to student data remains the legal responsibility of the Department and Florida school districts, in accordance with FERPA.

This Policy describes, in general, (i) what steps the Department takes to protect PII that is accessed by or provided to the Department or the Contractor; (ii) how that information is used; (iii) with whom the Department shares that information, and (iv) the steps the Department takes to protect the security of that information.

Monitoring of the implementation of this Policy is the shared responsibility of the Department and the Contractor.

Each of the privacy and security provisions in this Policy is effective upon contract execution.

II. DEFINITIONS

Capitalized terms referenced herein but not otherwise defined shall have the meanings as set forth below:

"Authorized User" means an individual Department or Contractor employee authorized by the Department to access PII maintained by the Department or the Department Contractor.

"Destroy" or "Destruction" means the act of ensuring the PII cannot be reused or reconstituted in a format which could be used as originally intended and that the PII is virtually impossible to recover or is prohibitively expensive to reconstitute in its original format.

"FERPA" means the Family Educational Rights and Privacy Act of 1974 (codified at 20 U.S.C. § 1232g) and its implementing regulations, as they may be amended from time to time. The regulations are issued by the U.S. Department of Education, and are available at http://www2.ed.gov/policy/gen/reg/ferpa/index.html.

"Contractor" means each Department contractor, including any subcontractor(s), that may be required to maintain or handle PII in the course of providing services in support of the Department.

"Personally Identifiable Information" (or "PII") means any information defined as personally identifiable information under FERPA.

III. PRIVACY OF PERSONAL INFORMATION

A. Basic Privacy Protections

1. Compliance with Law and Policy. All PII uploaded to or made accessible to the Department or Contractor will be handled, processed, stored, transmitted and protected in accordance with all applicable federal data privacy and security laws (including FERPA) and with this Policy.

2. Training. Employees of the Department (including temporary and contract employees) and the employees (including temporary and contract employees) of the Contractor are educated and trained on the proper uses and disclosures of PII and the importance of information privacy and security. Such training will include training for new employees and refresher training for current employees.

3. Personnel Guidelines. All the Department and Contractor employees are required to be aware of and work to protect the confidentiality, privacy, and security of PII. The Department, the Contractor, and their respective personnel shall not access PII except to comply with a legal obligation under federal or state law, regulation, subpoena or action by the Department that requires such access, or if there is legitimate need for the information to maintain data systems or to perform required services. The following list provides a general description of the internal policies with which the Department, the Contractor, and their respective personnel are required to comply:

   - Limit internal access to PII to the Department and Contractor personnel with proper authorization and allow use and/or disclosure internally, when necessary, solely to personnel with a legitimate need for the PII to carry out the educational purposes of the Department.
   - Allow access to PII by external parties only as authorized by the Department.
   - Require that materials containing PII in electronic form are stored solely within encrypted data repositories and PII are not available on unencrypted shared drives that are used by other users or on a local drive. PII must be encrypted in transit as well.

- When PII is no longer needed, delete access to PII, in accordance with secure destruction procedures that the Department will provide.
- Permit the Department and Contractor employees to store or download information onto a local or encrypted portable devices or storage only when necessary, and to create a written record for retention verifying that the information is encrypted and stored in password-protected files, and that devices containing the information have appropriate security settings in place (such as encryption, firewall protection, anti-virus software and malware protection).
- Require that any downloaded materials consisting of PII remain in the United States.
- Prohibit the unencrypted transmission of information from the Department, or any other source of PII, wirelessly or across a public network to any third party.

B. Access to PII

1. The Department makes the final determination regarding access to PII.
2. Parent Complaints. The Department shall be responsible for handling any complaints from parents (or students 18 and over) regarding the disclosure or use or accuracy of PII.
3. Privacy Administrators. The Department will designate a privacy administrator who is responsible for managing access to PII maintained by the Department or the Contractor by designating authorized users, and for determining the scope of PII to which they have access. The Privacy Administrator shall be responsible for making all administrative decisions regarding access to and use of PII.

IV. INFORMATION SECURITY PROGRAM

The security of the PII is of critical importance to the Department. The Department's IT Security Program consists of technical, physical and administrative safeguards to protect the PII. The Department's IT Security Program is designed to identify, manage and control the risks to system and data availability, integrity, and confidentiality, and to ensure accountability for system actions. The Department's Security Program includes, and the security program of each Contractor is required to include, the following key general processes which may be more fully described in other materials as necessary:

A. Information Security Risk Assessment

The Department periodically conducts, and the Contractor is required to periodically conduct, an accurate and thorough assessment of the potential risks and vulnerabilities to the confidentiality, integrity, and availability of electronic, paper, or other records containing PII maintained by the Department and the Contractor; to report such risks as promptly as possible to the Department or other official within the Department designated to be responsible for data privacy and security compliance; and to implement security measures sufficient to reduce identified risks and vulnerabilities. Such measures shall be implemented based on the level of risks, capabilities, and operating requirements. These measures must include as appropriate and reasonable the following safeguards:

1. Administrative Safeguards
   a. Sanctions: Appropriate sanctions against the Department or contractor personnel who fail to comply with the Department security policies and procedures, with the potential for criminal referral if warranted.
   b. System Monitoring: Procedures to regularly review records of information systems activity, including maintaining access logs, access reports, security incident tracking reports, and periodic access audits.
   c. Security Oversight: Assignment of one or more appropriate senior officials within the Department and the Contractor, as applicable, to be responsible for developing, implementing, and monitoring of safeguards and security issues.
   d. Appropriate Access: Procedures to determine that the access of the Department and the Contractor personnel to PII is appropriate and meets a legitimate need to support their roles in

business or educational operations. Procedures for establishing appropriate authorization and authentication mechanisms for the Department and the Contractor personnel who have access to PII.

e. Employee and Contractor Supervision: Procedures for regularly monitoring and supervising the Department and Contractor personnel who have access to PII.

f. Access Termination: Procedures for terminating access to PII when employment ends, or when an individual no long has a legitimate need for access.

g. Recording Requests and Disclosures: Disclosures of PII to, and requests for disclosures of PII from, third parties -- other than employees of the Department or of the Contractor that provided the PII to the Department -- are recorded.

2. Physical Safeguards
   a. Access to PII: Procedures that grant access to PII by establishing, documenting, reviewing, and modifying a user's right of access to a workstation, software application/transaction, or process.

   b. Awareness Training: On-going security awareness through training or other means that provide the Department and the Contractor personnel (including management) with updates to security procedures and policies (including guarding against, detecting, and reporting malicious software). Awareness training should also address procedures for monitoring log-in attempts and reporting discrepancies, as well as procedures for safeguarding passwords.

   c. Incident Response Plan: Procedures for responding to, documenting, and mitigating where practicable suspected or known incidents involving a possible breach of security and their outcomes.

   d. Physical Access: Procedures to limit physical access to PII and the facility or facilities in which they are housed while ensuring that properly authorized access is allowed, including physical barriers that require electronic control validation (e.g., card access systems) or validation by human security personnel.

   e. Physical Identification Validation: Access is physically safeguarded to prevent tampering and theft, including procedures to address control and validation of a person's access to facilities based on his or her need for access to the PII.

   f. Operational Environment: Procedures that specify the proper functions to be performed, the manner in which they are to be performed, and the physical attributes of the surroundings of facilities where PII is stored.

   g. Media Movement: Procedures that govern the receipt and removal of hardware and electronic media that contain PII into and out of a facility.

   h. Encryption and Final Disposition of Information: Procedures addressing encryption of all data at rest and in transit and the final disposition of PII. Procedures must include processes for the continued encryption of PII through the time when its secure deletion/destruction has been requested by the Department and the PII is deleted/destroyed.

3. Technical Safeguards
   a. Data Transmissions: Technical safeguards, including encryption, to ensure PII transmitted over an electronic communications network is not accessed by unauthorized persons or groups.

   b. Data Integrity: Procedures that protect PII maintained by the Department or the Contractor from improper alteration or destruction. These procedures will include mechanisms to authenticate records and corroborate that they have not been altered or destroyed in an unauthorized manner.

c. Logging off Inactive Users: Inactive electronic sessions shall be designed to terminate automatically after a specified period of time.

B. Security Controls Implementation

The Department and the Contractor will develop procedures addressing the acquisition and operation of technology, the specific assignment of duties and responsibilities to managers and staff, the deployment of risk-appropriate controls, and the need for management and staff to understand their responsibilities and have the knowledge, skills and motivation necessary to fulfill their duties.

C. Security Monitoring

In combination with periodic security risk assessments, the Department and the Contractor will use a variety of approaches and technologies to make sure that risks and incidents are appropriately detected, assessed and mitigated on an ongoing basis. The Department and the Contractor will also assess on an ongoing basis whether controls are effective and performing as intended, including intrusion monitoring and data loss prevention.

D. Security Process Improvement

Based on the Department's security risk assessments and ongoing security monitoring, the Department and the Contractor will gather and analyze information regarding new threats and vulnerabilities, actual data attacks on the Department and the Contractor, and new opportunities for managing security risks and incidents. The Department and the Contractor will use this information to update and improve their risk assessment strategy and control processes.

E. Breach Remediation

The Department and the Contractor strive to keep PII maintained by the Department and the Contractor secure and to use reasonable administrative, technical, and physical safeguards to do so. The Department and the Contractor will maintain and update incident response plans that establish procedures to follow in case a breach occurs. The Department and the Contractor will also identify individuals within their respective organizations responsible for implementing incident response plans if a breach should occur.

If the Department or the Contractor determine that a breach has occurred, when there is a reasonable risk of identity theft or other harm, or where otherwise required by law, the Department or the Contractor, as applicable, will notify affected parties as promptly as possible, and will cooperate as needed to enable compliance with all breach of confidentiality laws.

The Department and Contractor employee are required to report as promptly as possible to the Department leadership (or his or her designee) and persons responsible for managing their respective organization's incident response plan any incident or threatened incident involving unauthorized access to or acquisition of PII of which they become aware. Such incidents include any breach or hacking of the Department's electronic data system or any loss or theft of data, other electronic storage, or paper. As used herein, "Electronic Data System" means all information processing and communications hardware and software employed in the Department's or the the Contractor's business, whether owned by the Department or the Contractor, or operated by its employees or agents in performing work for the Department or the Contractor.

F. Personnel Security Policy Overview

The Department and the Contractor shall mitigate the risks posed by users of the Department- or the Contractor-maintained PII by:

1. Performing appropriate background checks and screening of new Department and Contractor personnel, in particular those who will have access to the Department-maintained PII;
2. Obtaining agreements from the Department and the Contractor internal users covering confidentiality, nondisclosure and authorized use of PII, including PII contained in or accessed through the Department; and

3. Providing training to support awareness and policy compliance for new hires and annually for all Department and Contractor personnel.

V. ENFORCEMENT

The Department and the Contractor will consistently enforce this Policy with appropriate discipline for its own employees. The Department and the Contractor, as applicable, will determine whether violations of this Policy have occurred and, if so, will determine the disciplinary measures to be taken against any director, officer, employee, agent or representative who violates this Policy.

The disciplinary measures may include counseling, oral or written reprimands, warnings, probation or suspension without pay, demotions, reductions in salary, or termination of service or employment, as well as criminal referral to law enforcement, if appropriate.

Persons subject to disciplinary measures may include, in addition to the violator, others involved in the wrongdoing such as (a) persons who fail to use reasonable care to detect a violation, (b) persons who withhold material information regarding a violation, and (c) supervisors who approve or condone the violations or attempt to retaliate against employees or agents or representatives of the Department or the Contractor for reporting in good faith violations or violators.

The Department also may take appropriate actions authorized under contract or by law regarding the Contractor's failure to comply with the terms of this Policy. It is noted that if the U.S. Department of Education finds that the Contractor has violated FERPA requirements related to disclosure, the Contractor may be debarred from access to PII from the Department for at least five (5) years.

APPENDIX J
REQUIREMENTS FOR SCORING PERFORMANCE ITEMS

This appendix supplements the ITN description of the procedures required for scoring constructed response items on Florida Standards Assessments in English Language Arts/Literacy (ELA/L) and Mathematics. The ITN requires that student responses for constructed response items ELA/L tests in grades 3 and 10 and Algebra 1 be scored by at least two readers (100% second scored) using imaging technology or other technological applications that are equally responsive to the test administration and reporting schedule. As a quality control measure, 20% of all other constructed response items for ELA/L and Mathematics tests will require at least two readers' scores. The Department desires to implement processes that are reliable and valid as well as efficient in terms of time and expenditures. Therefore, respondents should, at a minimum, follow the processes described in this appendix. Enhancements to these processes are acceptable when approved by the Department. For example, respondents may propose an alternate method or formula for second reads to ensure quality control of scoring constructed response items.

J.1 Overview of Handscoring of English Language Arts/Literacy and Mathematics Constructed Response Items

Respondents should submit scoring rubrics to be used in conjunction with other training materials for scoring constructed-response items for all grades and assessments. Field testing of items occurs in the spring of each year with items embedded within the operational tests. Near the end of operational scoring, contractor staff will begin selecting responses from the field test sample that represent a full range of student work. These responses will be presented to educator committees in mid-spring at field test rangefinding meetings. From these meetings, complete training and qualifying sets are created to train scorers who will score a sufficient number of responses to yield reliable statistical data for each constructed-response item. Every effort must be made to expedite scoring of the field test responses in order to have the item statistics available to construct and produce the following year's operational tests. Based on the number of constructed response items field tested each spring, the Department will consider an additional fall field test rangefinder meeting for the purpose of preparing training materials for constructed response items that were not scored in the summer. The statistics for these items will be banked for possible use on future operational tests. After all rangefinder meetings are completed, a final scoring material review meeting between the Department and contractor staff will be conducted to finalize training, qualifying, and initial validity materials for scorer training.

Depending on the measurement model for the ELA/L assessment, the Department will consider a stand-alone field test for ELA/L extended-response tasks. Respondents who propose a stand-alone field test should prepare field test sampling specifications detailing the sampling methodology. **The Department prefers that such a field test, if proposed, take place in the December time frame of each year of administration.**

J.2 Conduct Field-Test and Operational Rangefinding Meetings for ELA/L and Mathematics

Prior to the scoring of constructed-response items field tested during the spring administrations, the contractor will be responsible for organizing and implementing rangefinding meetings to select training papers for the tasks. The meetings take place in Tallahassee and will involve Florida educators, Department staff, and the contractor's scoring directors and assistant directors over a period of up to three weeks each spring and each fall for field-test rangefinder meetings and each fall for operational rangefinder meetings. For all educator meetings, the Department and contractor staff will hold concurrent meetings for subjects and grades whenever possible.

The contractor's subject area lead scoring directors, subject/grade scoring directors, and assistant scoring directors will participate in meetings with up to 10 Florida educators and a Department staff member who will serve as chair.

The contractor's staff will maintain a record of all scores and will keep notes during the rangefinder selection process to document the rationale for assigning scores. Following the meeting, the contractor's staff will meet with Department staff to finalize the student responses to be used as rangefinders and to identify others that may be used as training, qualifying, and validity responses. The contractor's staff is also responsible for providing written annotations in a format approved by the Department for the training materials. Requirements for selecting validity sets are identified in the following section. Contractor staff is also responsible for developing as part of the scoring guides any additional scoring notes or criteria required to conduct accurate scoring of the constructed-response tasks. The Department will approve all selections, annotations, or other materials to be used in training. See Section 7.5.4.5 for associated tasks.

J.3 Conduct Scoring Material Review Meetings

Meetings to review proposed scoring materials for operational tests will be conducted in Tallahassee at least three months prior to the beginning of handscoring training for the spring test administrations. The contractor's subject area lead scoring director and the subject/grade scoring directors will participate in meetings with Department staff to review scoring criteria and rangefinder papers that were used to score the tasks during field test scoring, or during the previous operational use.

The purpose of each review meeting is to review the criteria, supplement the initial set of rangefinder papers with additional papers, if necessary, and to ensure that the contractor's scoring directors and Department staff share the same, detailed understanding of the scoring criteria for the operational constructed-response tasks. The scoring standards established by the initial field-test rangefinder selection will be maintained during the subsequent review. See Section 7.5.4.5 for associated tasks.

J.4 Produce Scorer Training Materials

Department staff will work closely with the contractor to prepare scoring materials. Frequent communication between Department and contractor staff can be expected following rangefinder selection and scoring material review meetings to initiate and complete the development of scoring materials. All scoring material will be submitted to the Department for review and approval according to an agreed-upon schedule. Scoring materials must be approved at least four weeks prior to the beginning of training and scoring. The contractor will be responsible for developing a detailed schedule to be included in the handscoring specifications identifying steps and schedules in the development of scoring materials. The contractor is responsible for producing the following scoring materials for each operational and field-test constructed-response task.

- Scoring guides
- Training sets
- Qualifying sets
- Validity sets
- Daily calibration sets
- Targeted calibration

The contractor will develop a system for cataloging and storing all scoring materials developed during the course of the project.

Scoring Guides - Scoring guides will be produced for each reader to use during training and scoring. The scoring guides will contain the rubrics, scoring criteria, constructed-response tasks, passages (if applicable), glossary of key terms, and other scoring guidelines designated by the Department and the contractor. The contractor will be responsible for writing annotations for the scoring guides, and the Department will give final approval to all annotations.

Training Sets – Contractor must develop a sufficient number of training (practice) sets for ELA/L and Mathematics constructed-response items for scorer training to ensure valid and reliable scores for the duration of the project. The Department will work with contractor staff to determine the number and types of

training sets to be used. The contractor will be responsible for writing the annotations for the training papers for all content areas, and the Department will give final approval to the annotations. The respondent should propose the process for administering the training sets.

Validity Papers - Initial validity responses are selected from student responses to field-test administrations and do not appear in any other scoring materials. These responses allow the Department and contractor to monitor scoring accuracy and to maintain a consistent focus on the established rubrics and scoring guidelines. A sufficient number of initial validity responses must be approved in time to be loaded into the electronic scoring system before the scoring session begins. Validity responses are administered to readers online as part of the electronic scoring system and must be indistinguishable from live responses. The validity insertion rate will be agreed upon during the negotiation phase; however, for cost purposes, respondents should assume a validity insertion rate of 1 in 10 for extended ELA/L items and 1 in 25 for all other constructed response items. Once handscoring begins, scoring directors must refresh the validity pool during live scoring by escalating proposed validity responses to the Department for approval. All proposed validity papers for constructed-response items must have two agreement scores assigned. These scores may be generated by two scorers or by one scorer and a back-reading score. The frequency distribution of approved validity papers in the pool throughout the project should mirror the operational frequency distribution to the greatest extent possible. Responses that are approved by the Department will be moved into the electronic scoring system for random distribution to scorers. To avoid validity responses being repeatedly seen by the same scorers, adding and deleting validity papers within the electronic system is a continuous process throughout the project.

The contractor will describe the estimated number of readers to be employed and plans for the administration of validity responses.

Daily Calibration Sets – In addition to review of selected papers from the Scoring Guide at the start of each shift, daily calibration sets will be sent via the electronic scoring system at least once a day – usually after lunch or break. These 2-3 paper sets will be proposed by scoring directors and approved by the Department. The purpose of daily calibration is to highlight scoring issues or remind scorers of what to look for at a certain score point. Following the scoring of the calibration sets, the scoring directors will conduct a short discussion to further explain the scoring standards therein.

Targeted Calibration Sets – Targeted calibration sets consist of 2-3 responses that target an individual's scoring trend and may be used as individual training/remediation for scorers whose quality metrics are below the standard for any reason.

At the completion of scoring, the contractor will securely ship to the Department an electronic file of all scoring materials prepared for and utilized during scoring.

J.5 Scoring Directors for Handscoring

The contractor will assign its most qualified scoring staff to be scoring directors for Florida's Standards Assessments. All scoring directors must have worked in scoring director roles on a regular, continuing basis. The project and site scoring directors must be highly qualified to serve in these positions. They must have an appropriate educational background and extensive experience in directing state-level performance scoring projects as members of the contractor's regular scoring staff. The contractor will submit resumes of all handscoring staff to the Department for approval before assigning them to the project.

The contractor will appoint a full-time project director to serve as overall director for Florida Standards Assessment handscoring activities. The project director must be available on a daily basis to discuss issues with the site scoring directors and the Department either in person, by e- mail, by phone or fax throughout the training and scoring sessions.

The contractor must provide at least one full-time lead scoring director for each content area with expertise in their respective subject. This contractor staff will be available as liaison for Department content specialists for all handscoring activities.

The contractor will provide a site scoring director at each site who is dedicated solely to scoring of Florida's tests during the scoring period. Site scoring directors will be on site throughout the training and scoring sessions and will personally assist the scoring directors during the training of team leaders and readers and throughout the scoring sessions.

The project director must be a senior scoring manager for the contractor. Each site scoring director must have served as a site scoring director for at least two projects in the past three years involving projects similar in size and scope to Florida's.

The scoring directors who will direct the scoring for each subject/grade combination must be highly qualified to serve in this position. They must have an appropriate educational background and must have had experience serving as scoring directors at this level for previous scoring projects conducted by the contractor. The scoring directors must participate in the field test and operational rangefinder and scoring material review meetings. At least two scoring directors will be required for each grade and subject in order to be available in the event of the scheduling of two shifts or two scoring rooms. For the ELA/L extended constructed response items, it may be necessary to assign three scoring directors for this project.

At least one assistant scoring director will be appointed to assist each scoring director in all aspects of directing scoring. The assistant scoring directors must also have an appropriate educational background and must have had experience serving as scoring directors or extensive experience serving as team leaders for previous scoring projects conducted by the respondent. The assistant scoring directors must also participate in all rangefinder meetings.

Lead scoring directors, scoring directors, and assistant scoring directors must have their résumés approved by the Department prior to assignment to the project.

As stated above, Florida's handscoring involves selection of rangefinders for field-test tasks at the same time that responses to the operational test are being scored. The scoring director and the assistant scoring director for each subject/grade will work together as a team to ensure that field test rangefinder selection and ongoing direction of operational scoring are both conducted at the highest levels of quality. It may be required that contractor staff assigned to the project be present at field test rangefinding meeting while other contractor staff remains at the scoring site to oversee completion of operational scoring.

For each assessment, the project and site scoring directors will ensure that all additional training required for scoring is conducted prior to team leader training. Respondents should describe how they intend for this training to occur.

J.6 Team Scoring Leaders

The contractor will hire one team leader for every 10 to 12 readers. The team leaders may be especially recruited by the contractor or identified through the reader recruitment process. Team leaders must go through the same screening process as readers. The Department requires that team leaders have previous experience as readers and as team leaders if at all possible. At a minimum, team leaders must be experienced readers.

Extensive training sessions approximately four days in length will be conducted for team leaders before readers are trained. The scoring directors and assistant scoring directors for each set of constructed-response tasks will conduct the training. The team leader training sessions will include the successful completion of a minimum of three training sets and two qualifying rounds. For ELA/L extended constructed-response writing tasks, Florida currently requires five training sets and three qualifying rounds.

The initial training will include the training and qualifying procedures that will be used for the readers. In addition, there will be training on managing interaction with scorers, interpreting scoring reports, completing forms, and following all procedures required by the contractor and the Department.

J.7 Recruit and Hire Readers

Respondents should include an analysis of the number of people that must be recruited, hired, and subsequently qualified as readers to complete the scoring within the time required to return reports to districts by the dates designated in the project schedule. The analysis must include the number and percent of people who will be expected to qualify, expected reader-attrition rate during each scoring session, and production required by reader and, if necessary, by shift at each site to complete the work. The respondent should describe the number of team leaders needed for each subject/grade. This detailed analysis should be completed in the reply for the Florida Standards Assessments in English Language Arts/Literacy and Mathematics. Respondents should also indicate expected changes in reader numbers across successive administrations.

All readers are required to have earned a bachelor's degree in mathematics or the area of English Language Arts, or some related field. Readers of mathematics constructed-response tasks must have either been certified to teach the level of mathematics being assessed, have a bachelor's degree in mathematics education or mathematics, or must have completed a degree program with a sufficiently strong emphasis in mathematics to have the mathematics knowledge needed to effectively score responses to mathematics items.

Potential readers in Florida may include retired Florida teachers or substitute teachers in the state of Florida provided that they will not teach in Florida's public schools (or work as a substitute teacher therein) for the remainder of the current school year. The Respondent is responsible for conveying this information and obtaining signed verification that potential readers agree to adhere to this stipulation.

The contractor must work with the Department to implement a screening process for hiring readers to satisfy the Department's requirements. Potential readers must document that they meet the minimal education requirements during the screening process. Respondents should describe the screening process to select scorers.

Potential readers with related degrees are those with degrees that involve course work and experience related to the content areas being scored. Potential candidates for training and qualifying to score mathematics shall have degrees in fields such as engineering, computer science, or liberal arts with an emphasis in mathematics. Likewise, for scoring English Language Arts/Literacy, candidates shall have degrees in fields such as English, English education, elementary education, reading education, history, psychology, or journalism. Potential readers will provide information about degree, certification, and course work taken. Minimum college coursework that represents a sufficiently strong emphasis in mathematics needed to score in this area is college-level credit in at least three courses to score at the high school level, two courses for the middle-school level, and one course to score at the elementary level. The contractor will provide for an independent, third-party verification that the potential reader has earned the identified degree. It has been the Department's experience that obtaining third-party verifications is more expensive and time-consuming for potential readers holding degrees conferred by foreign universities and degrees conferred by U.S. colleges and universities fifteen or more years ago. The contractor must take this into consideration when hiring potential readers. Potential readers whose degrees cannot be verified by a third party before the start of live scoring must be dismissed. No scores must be entered or maintained in the scoring system from readers with unverified qualifications.

Potential readers also include those with a bachelor's degree or higher who have successfully completed a scoring project in the content area and at the elementary, middle, or high-school level being scored, qualifying and performing at levels required by Florida's program. Potential readers will ultimately demonstrate their qualification to score through successful completion of training and meeting the qualifying standard on scoring qualification rounds, as indicated in the Handscoring Specifications document.

The contractor will document qualifications of readers assigned to be trained in an electronic file (the "Qualification File") specifying degrees earned; relevant teaching, educational, or work experience; and previous scoring experience relevant to scoring Florida's assessments. The Qualification Files will not

include personally identifiable information such as name, address, and telephone number. Documentation will be provided to Department staff, as needed, as it is accumulated throughout the hiring and training period. After scoring has begun, the contractor will only maintain Qualification Files for readers who successfully qualify and score student responses to Florida's assessments.

The Department will monitor adherence to the screening process, review reader files as needed, approve acceptable related degrees, and provide general guidance on the screening process. Typically, each scoring site will be monitored by at least one representative from the Department for two to three weeks beginning with training. Prior to and during this on-site monitoring, the Department will provide oversight and monitoring of both potential Team Leader and reader qualifications. This monitoring will include a review for acceptability of potential readers for assignment to the handscoring program,

In the month prior to handscoring training, weekly conference calls between the contractor and the Department will provide discussions surrounding site readiness, hiring/staffing, system readiness, and other pertinent topics related to handscoring. After recruitment of potential readers is complete, the Department staff will review a sample of potential readers' qualifications. Staff review of qualifications will be conducted utilizing a random sample of the Qualification Files. Staff will select additional potential scorer IDs for review as deemed necessary, e.g., for candidates who are having little success in scoring accurately during training. All qualifications for team leaders and a minimum of one in five candidates' documentation will be reviewed (e.g., for an initial hiring of 150 candidates for training, approximately 30 sets of documentation will be requested). Once scoring training begins, daily conference calls between the contractor and the Department will be conducted for project management purposes.

As part of the screening process, all potential readers must sign a statement indicating that they understand the following conditions:

- Applicants who do not successfully complete the training and qualifying requirements, they will not be hired as readers.
- Hired readers may be dismissed if, after being trained to score, their scoring performance does not meet the requirements of the Department or the respondent acting on behalf of the Department.
- Readers who are absent from scoring for two or more consecutive scoring days must repeat the training and qualifying procedures described above.
- Applicants must agree that they will not teach or work as a substitute teacher in Florida's public schools for the remainder of the current school year.

Applicants hired for training must also sign an agreement with the Department that they will maintain the security of Florida's test materials in addition to security agreements required by the contractor.

J.8 Training and Qualifying of Readers

The contractor will conduct separate training sessions for each constructed-response task or task set. Training is provided separately for each grade level. The scoring director will conduct training with the assistance of team leaders, under the direction of site scoring directors. The purpose of the training is to ensure that each person who scores Florida's student responses has met the Department's standards for scoring. The training process is essential for ensuring that scores assigned to performance task responses provide valid and reliable information. During training, the trainees will be provided with a scoring guide, highlighters and pens or pencils to make notations on training materials. At the conclusion of training, qualified readers will be taught how to use the alert system to identify students whose responses indicate the need for intervention. The contractor is responsible for developing training procedures in consultation with the Department. The Department will have final approval on all training techniques.

To qualify as a reader, candidates must meet the established standards for the qualification sets approved by the Department.

Assignment of scorers to items will be done in consultation with Department staff.

J.9 Handscoring Reports

The contractor will collect reader performance statistics and provide electronic access to daily and cumulative reader handscoring reports to team leaders and above, including Department staff. The reports must include both real-time and partial- to full-day reports. Real-time reports must include reader inter-rater reliability and validity reports. The same reports are required for both operational and field-test scoring. The Department will determine, in consultation with the contractor, which of these reports will be available to the Department in real-time. The reports listed below are described generically. The contractor and the Department will work together initially to determine the format of this information that should be used for reporting to the Department. An annual review of the format and function of the reports will be conducted and some modifications may be required prior to the next test administration requiring handscoring based upon that review. The Department will have final approval on the design and user access level of each report.

At a minimum, reports containing the following information will be produced and will include both numbers and percentages, as appropriate.

1. Cumulative Training Report by Reader. This report identifies, by performance task or performance task sets, by reader, by team, and by site (subject/grade combination), performance on training sets.
2. Cumulative Training Report by Document. This report identifies and summarizes, by performance task or performance task set, by team, and by site, performance on documents.
3. Cumulative Qualifying Report by Reader. This report identifies, by performance task or performance task set, by reader, by team, and by site, performance on qualifying sets.
4. Cumulative Qualifying Report by Document. This report summarizes, by performance task or performance task set, by team, and by site, performance on documents.
5. Cumulative Reader Performance Report. This report includes the reader's scores on each training set, qualifying set, and validity set; daily inter-rater reliability statistics; and daily score point distribution. This report will be updated daily. The report will be accessed on request of the scoring director or the team leader.
6. Daily and Cumulative Score Point Distribution. This report summarizes, by performance task or performance task set, by team, by site, and by rubric (0-2, 0-4, and 0-6), daily and cumulative distributions of score-point assignments.
7. Daily and Cumulative Validity. This report summarizes, by performance task or performance task set, by team, and by site, daily and cumulative performance on validity sets.
8. Daily and Cumulative Inter-rater Reliability. This report summarizes, by performance task or performance task set, by site, by team, and by rubric, daily and cumulative levels of inter-rater agreement statistics.
9. Score Point Distribution for Standard Curriculum Students. This report summarizes, by team and by site, the cumulative distribution and mean of score-point assignments for standard curriculum students, for writing performance tasks only.
10. Daily and Cumulative Score Point Distribution and Inter-rater Reliability by Reader. This report identifies and summarizes, by performance task or performance task set, by site, by team, by rubric, by reader, daily and cumulative score-point assignment distributions and levels of inter- rater agreement statistics (including perfect, adjacent, and disparate agreement; high/low scoring summaries; and required resolutions).
11. Daily and Cumulative Validity by Reader. This report summarizes, by performance task or performance task set, by site, by team, by rubric, by reader, statistics indicating daily and cumulative

levels of agreement with validity set scores (including perfect, adjacent, and disparate agreement and high/low scoring summaries).

12. Daily and Cumulative Validity by Validity Set. This report summarizes, by site, by team, by validity set, by reader, statistics indicating daily and cumulative levels of agreement with validity set scores (including a listing of validity set scores with readers assigned scores; perfect, adjacent, and disparate agreement; and high/low scoring summaries).
13. Daily and Cumulative Read-Behind Reports. This report summarizes, for image scoring applications, by performance task or performance task set, by team, and by site, the result of online read-behinds by team leaders or scoring directors.
14. Daily and Cumulative Timing Report. This report summarizes, by site, by team, by performance task or performance task set, the daily and cumulative number of readers engaged in scoring and statistics on actual time spent scoring performance tasks or performance task sets (including mean and range).
15. Daily and Cumulative Completion Report. This report, by site and by team, summarizes the daily and cumulative number of student responses read and the proportion of student responses remaining to be read. This report also compares on a daily and cumulative basis the amount of readings completed in comparison to projected completion targets.

By the time of the first handscoring planning meeting with the Department, the contractor will provide an annotated list and samples of all reports, including reports used internally by the contractor to monitor the quality and pace of the scoring session. The Department may request that some internal reports be used for Florida and available to Department staff.

At the completion of operational and field-test scoring, the contractor will provide the Department with final summaries of all cumulative handscoring reports. The summary reports are to be made available as electronic files and will be posted to a secure transfer file system maintained by the contractor and shared with the Department to access, manage, and transfer files as needed throughout the project. The contractor will produce a technical report that summarizes the score reports and provides details related to the reliability and validity of the field-test and operational handscoring. These materials will be reviewed at an annual handscoring debrief.

J.10 Scoring Student Responses

The rubrics used for all constructed-response tasks must be approved by the Department and will be used in conjunction with approved scoring guides and additional training materials throughout the handscoring of student responses. Constructed-response items for ELA/L tests in grades 3 and 10 and Algebra 1 will be scored by at least two readers (100% second scored) using imaging technology or other technological applications that are equally responsive to the test administration and reporting schedule. As a quality control measure, 20% of all other constructed response items for ELA/L and Mathematics tests will require at least two readers' scores. Responses receiving first and second reads of an individual student's response to an item will be randomly distributed across all readers designated to score that item. Assignment of responses across schools must be randomized to the extent that an individual reader scores responses from several schools within the same time period and does not score responses from the same school in succession.

The Department will provide the contractor with a specific set of scoring rules for resolving disagreement between first and second readings with third and, infrequently, fourth readings and for calculating final scores. The following should be noted:

- Third, independent readings are conducted by team leaders.
- Complex resolutions and resolutions involving fourth readings and unscorable decisions are resolved by scoring directors.
- **All discrepancies for short-response tasks shall be resolved by a third reader**

ATTACHMENT 2
DRUG-FREE WORKPLACE
(will be considered in case of identical tie replies)

Preference shall be given to businesses with drug-free workplace programs. Whenever two or more bids which are equal with respect to price, quality, and service are received by the state or by any political subdivision for the procurement of commodities or contractual services, a bid received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. Established procedures for processing tie bids will be followed if none of the tied vendors have a drug-free workplace program. In order to have a drug-free workplace program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.
2) Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.
3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).
4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.
5) Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.
6) Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

MINORITY SUB CONTRACTORS UTILIZATION SUMMARY
STATE OF FLORIDA DEPARTMENT OF EDUCATION

The Department's Supplier Diversity initiative strives to ensure the promise of Florida's future is shared by all of its residents, regardless of race, ethnicity, disability, neighborhood or background. To that end, the Department is dedicated to support, track and increase its small, minority-, women-, and service-disabled veteran business enterprise spending with Prime Contractors and subcontractors. This form was developed to assist in these efforts.

The Prime Contractor shall report all small, minority-, women-, and service-disabled veteran business enterprise Subcontractors, identifying the Name, Address, Type of Certification and Dollar Amount on the form below. The Prime Contractor shall submit this form with each invoice submitted for payment, whether or not funds have been spent with a small, minority-, women-, and service-disabled veteran business enterprise subcontractor for the period covered by the invoice. The Office of Supplier Diversity, Florida Department of Management Services will assist in furnishing names of qualified minorities. The Office of Supplier Diversity can be reached at (850) 487-0915; the Internet Web address is http://dms.myflorida.com/other_programs/office_of_supplier_diversity_osd .

Section 287.135, Florida Statutes, prohibits agencies from contracting with companies, for goods or services over $1,000,000, that are on either the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Petroleum Energy Sector List. Both lists are created pursuant to section 215.473, Florida Statutes.

As the person authorized to sign on behalf of Respondent, I hereby certify that the company identified above in the section entitled "Respondent Vendor Name" is not listed on either the Scrutinized Companies with Activities in Sudan List or the Scrutinized Companies with Activities in the Iran Petroleum Energy Sector List. I understand that pursuant to section 287.135, Florida Statutes, the submission of a false certification may subject company to civil penalties, attorney's fees, and/or costs.

ATTACHMENT 7
CONTRACT STANDARD TERMS AND CONDITIONS
STATE OF FLORIDA DEPARTMENT OF EDUCATION

I. Pursuant to S. 287.058(1), Florida Statutes ("F.S."):

A. Bills for fees or other compensation for services or expenses shall be submitted in detail sufficient for a proper preaudit and postaudit thereof.

B. Travel expenses will be reimbursed only if expressly authorized by the terms of the Contract. Bills for any travel expenses shall be submitted in accordance with s. 112.061, F.S.

C. The Department may unilaterally cancel this Contract if the Contractor refuses to allow access by members of the public to all documents, papers, letters and materials made or received in conjunction with the Contract that are subject to Chapter 119, F.S., and are not exempt from public inspection by s 119.071, F.S., or by other provisions of general or special law.

D. The Deliverables specified in the Contract must be received and accepted in writing by the Department's Contract Manager before Contractor is entitled to payment.

E. To complete this Contract, all services must be performed and/or goods received on or before the date(s) specified in the Contract.

F. If this Contract is expressly renewable, it may be renewed for a period that may not exceed three years or the term of the original contract, whichever is longer. The renewal price for the contracted service is set forth in the bid, proposal, reply. Cost for renewal shall not be changed. Renewals shall be contingent on satisfactory performance evaluations by the Department and subject to the availability of funds. Exceptional purchase contracts pursuant to s. 287.057(3)(a) and (c), F.S., may not be renewed.

II. The Contractor shall prepare an invoice for the amount due and mail it to the Department of Education Comptroller after having delivered the products and services required under this Contract to the Contract Manager. The invoice shall set forth details sufficient for a proper pre-audit and post-audit including, where applicable, the products and services delivered and completion dates. Upon receipt of the invoice, the Department of Education Comptroller will request confirmation from the Contract Manager that the delivered products and services are satisfactory and payment is due. If for any reason they are not satisfactory, payment will be withheld until the unsatisfactory condition or conditions are corrected. Upon receipt of the Contract Manager's approval, the Department of Education Comptroller shall process each invoice in accordance with the provisions of s. 215.422, F.S.

A. Contractor agrees to submit invoice within thirty (30) days of the Department's acceptance of deliverables. It is understood that should Contractor fail to submit invoice within thirty (30) days following the Department's acceptance of the deliverables, the Department shall not be responsible for payment thereof under this contract or quantum meruit.

III. Section 215.422, F.S., provides that agencies have five (5) working days to inspect and approve goods and services, unless bid specifications or the Contract specifies otherwise. With the exception of payments to health care providers for hospital, medical, or other health care services, if payment is not available within forty (40) days, measured from the latter of the date the invoice is received or the goods or services are received, inspected and approved, a separate interest penalty set by the Comptroller pursuant to s. 55.03, F.S., will be due and payable in addition to the invoice amount. To obtain the applicable interest rate, please contact the Department's Fiscal s. at 850/245-0401 or Purchasing Office at 850/245-0735. Payments to health care providers for hospitals, medical, or other health care services, shall be made not more than thirty-five (35) days from the date of eligibility for payment is determined, and the daily interest rate is .02740 percent. Invoices returned to a vendor due to preparation errors will result in a payment delay. Invoice payment requirements do not start until a properly completed invoice is provided to the agency. A Vendor Ombudsman, whose duties include acting as an advocate for vendors who may be experiencing problems in obtaining timely payment(s) from a State Agency, may be contacted at 866/352-3776 or by calling the Chief Financial Officer's Hotline, 800/342-2762.

IV. As used in this Contract, the term "Deliverable" refers to tangible "commodities", as defined in s. 287.012(5), F.S., which the Contractor provides pursuant to the Contract and to reports or other tangible or documentary evidence which demonstrate that the Contractor has performed the services required by the Contract. The following provisions govern Deliverables, as applicable:

A. Each Deliverable must be physically delivered to the Department's Contract Manager, or to a person designated by the Contact Manager. If delivery is made to a designee, the Contractor shall give written notice to the Contract Manager of the delivery. A Deliverable is not received until the Contract Manager has physical control of deliveries or has written notice that the designee has physical control.

B. In each case in which the approval of a Deliverable is dependent upon tests being conducted by the Department or Contractor, independently or jointly, the Department's inspection and approval of the Deliverable shall not be subject to the five (5) day provision in s. 215.422, F.S., but shall be governed by the terms and conditions of the acceptance testing plan as stated in Attachment A, until approved in accordance with the plan.

C. In each case of a Deliverable of information technology, as defined at s. 287.012(14), F.S., unless specified otherwise in Attachment A, the acceptance testing plan is deemed to include as a minimum the reliable performance of the information technology in accordance with its design specifications in:

1. a test environment that simulates the production environment as much as is reasonably possible; and
2. the production environment for which it is intended for a period of time sufficient for the information technology to have experienced the major foreseeable exigencies of the production functions.

D. The Department's inspection, including testing when applicable, shall determine whether or not the Deliverables appear to be in compliance with the Contract. The Contractor shall be notified in writing of any apparent deficiency. The written notice shall

detail the specific action required by the Contractor to correct the deficiency. The Contractor shall timely correct such deficiency and resubmit the deliverable for acceptance.

V. The Contractor represents and agrees that information submitted in support of its requests for payment is the basis of payment and is true and accurate to the best of knowledge of the responsible signatory. A violation of this provision shall subject the violator to the provisions of s. 68.082, F.S., pertaining to false claims against the State, and/or s. 837.06, F.S., pertaining to false official statements.

VI. This paragraph applies if this Contract expires in a fiscal year subsequent to the fiscal year in which the Contract is entered. The State of Florida's fiscal year comprises July 1 through June 30. The Department's and State of Florida's performance and obligation to pay under this Contract is contingent upon an annual appropriation by the Legislature. If the Legislature fails to make the necessary appropriation, the Department will determine if there are other unencumbered funds which are available and which can be lawfully expended to pay for the Department's obligations hereunder. If the Department determines that there are no such funds, the Department shall promptly notify the Contractor. The giving of notice shall be deemed to have cancelled this Contract by mutual consent, with the date of notice being the date of cancellation.

VII. Notwithstanding anything to the contrary contained in a State Term Contract, Contractor warrants that all commodities, as defined in s. 287.012, F.S., shall meet the specifications of the Contract and shall be merchantable and fit for the particular purposes intended by the Contract.

VIII. The Contractor further warrants that as to each Deliverable produced pursuant to this Contract, Contractor's production of the Deliverable, and the Department's use of the Deliverable, will not infringe on the copyrights of any third party. This provision applies to each work of authorship in which copyrights subsist pursuant to 17 U.S.C. Sections 102-105 and to each exclusive right established in 17 U.S.C. Section 106. In furtherance of this provision the Contractor additionally warrants that:

A. As to each work of software or other "information technology", as defined in s. 287.012(15), F.S., in which copyrights subsist, the Contractor has acquired the rights by conveyance or license to any third party software or other information technology, which was used to produce the Deliverable;

B. As to each image and sound recording incorporated into a Deliverable, the Contractor has acquired the necessary rights, releases, and waivers from the person whose image or sound is included, or from the holder of the copyrights subsisting in the literary, musical, dramatic, pantomime, choreographic, pictorial, graphic, sculptural, motion pictures, audiovisual work or sound recording from which the included image or sound recording was taken.

IX. The Contractor further warrants that the Contractor shall not disclose to any third party, without the express, prior, written approval of the Department, any personally identifiable information about any student. This applies to information which came from any record or report of a Florida public education institution or from any education record which is subject to the Family Educational Rights and Privacy Act, 20 U.S.C. Section 1232g. The terms "record a report" and "student" shall have the meanings prescribed in s. 1002.22(2)(c) and (d), F.S. The term "educational record" shall have the meaning prescribed in 20 U.S.C. Section 1232g(a)(4).

X. In the event that the Governor and Cabinet are required to impose a mandatory reserve on appropriations, the Department shall amend this Contract to place in reserve the amount determined by the Department of Education to be necessary because of the mandatory reserve. Such amendments may provide for adjustments in the Deliverable products and services as may be necessary.

XI. Intellectual property is subject to following additional provisions:

A. Anything by whatsoever designation it may be known, that is produced by, or developed in connection with, this Contract shall become the exclusive property of the of the State of Florida and may be copyrighted, patented, or otherwise restricted as provided by Florida or federal law. Neither the Contractor nor any individual employed under this Contract shall have any proprietary interest in the product.

B. With respect to each Deliverable that constitutes a work of authorship within the subject matter and scope of U.S. Copyright Law, 17 U.S.C. Sections 102-105, such work shall be a "work for hire" as defined in 17 U.S.C. Section 101 and all copyrights subsisting in such work for hire shall be owned exclusively by the Department pursuant to s. 1006.39, F.S., on behalf the State of Florida.

C. In the event it is determined as a matter of law that any such work is not a "work for hire", Contractor shall immediately assign to the Department all copyrights subsisting therein for the consideration set forth in the Contract and with no additional compensation.

D. The foregoing shall not apply to any preexisting software, or other work of authorship used by Contractor, to create a Deliverable but which exists as a work independently of the Deliverable, unless the preexisting software or work was developed by Contractor pursuant to a previous Contract with the Department or a purchase by the Department under a State Term Contract.

E. The Department shall have full and complete ownership of all software developed pursuant to the Contract including without limitation:

1. The written source code;
2. The source code files;
3. The executable code;
4. The executable code files;
5. The data dictionary;
6. The data flow diagram;
7. The work flow diagram;
8. The entity relationship diagram; and

9. All other documentation needed to enable the Department to support, recreate, revise, repair, or otherwise make use of the software.

XII. The Department reserves the right, at its option, to issue a change order to delete work tasks reducing the total Contract amount by up to 10%. An addition of work tasks within the scope of the Contract, an increase in the total Contract amount, or a decrease of more than 10% of the total Contract amount, shall be implemented only by a Contract amendment signed by both the Department and the Contractor.

XIII. Pursuant to s. 216.347, F.S., no funds awarded under this Contract may be used for the purpose of lobbying the Legislature, the judicial branch, or a State agency.

XIV. The Contractor shall grant access to all records pertaining to the Contract to the Department's Inspector General, General Counsel and other agency representatives, the State Auditor General, the Office of Program Policy and Government Accountability, and the Chief Financial Officer.

XV. The Contractor agrees to permit onsite visits by designated Department employees or agents to conduct audits to ensure compliance with Section 20.055, Florida Statutes. These audits may require Department access to records and data, computers and communications devices, and other materials whether owned or operated by the Contractor. Access may include, but is not limited to, user level and/or system level access to any computing or communications device; access to information (electronic, hardcopy, etc) that may be produced, transmitted or stored on the Contractor's equipment or premises; access to work areas; and access to interactively monitor and log traffic on the Contractor's networks.

XVI. The Contractor must carry general liability insurance, which shall include errors and omissions coverage. The amount of coverage shall be a minimum of $1,000,000 or the aggregate total of all contractual agreements between the Contractor and the agencies and political subdivisions of the State of Florida, whichever is greater. The Contractor shall add the Department as an additional insured on the general liability coverage. The insurance shall cover all of the Contractor's operations under this Contract and shall be effective throughout the Term of this Contract, as well as any renewals or extensions thereto. It is not the intent of this Contract to limit the types of insurance otherwise required by this Contract or that the Contractor may desire to obtain or be required to obtain by law. The Contractor must submit a Certificate of Insurance indicating coverage for general liability purposes and additional insured coverage, and shall maintain and pay for same throughout the Term of this Contract. A Certificate of Insurance indicating adequate coverage shall be submitted to the Department prior to the time the Contract is entered. Any and all insurance policies shall be through insurers qualified to do business in Florida.

XVII. The Contractor agrees to provide the Department upon execution of this Contract with a performance bond or other security deposited with the Department in the total amount of the Contract or another amount if specified in the procurement specifications or Attachment A, guaranteeing that the Contractor will perform all work according to this Contract, within the time and price specified in the Contract. A performance bond shall be issued from a surety company, qualified to do business in Florida.

XVIII. The Contractor may not assign or subcontract all or any portion of this Contract without the advance written consent of the Department.

XIX. In all cases in which the Contractor, with the advance written consent of the Department, assigns or subcontracts, all or any portion of the Contract:

A. The Contractor shall monitor the subcontractor or assignee and establish controls to avoid or mitigate risks identified by the Department or the Contractor; and

B. The Contractor shall allow the Department to monitor subcontractor or assignee activity and compliance, and the Contractor shall require the subcontractor or assignee to promptly submit to the Department, at the Department's request, complete and accurate documentation pertaining to the subcontract or the Contract.

XX. The Contractor shall coordinate with and assist the Department's Contract Manager in the performance of the latter's responsibilities, which include without limitation:

A. Monitoring the activities of the Contractor;

B. Receiving and reviewing the reports of the Contractor to determine whether the objectives of the Contract are being accomplished;

C. Receiving and reviewing the invoices for payment of funds to assure that the requirements of the Contract have been met and that payment is appropriate;

D. Evaluating the process used by the Contractor to monitor the activities of any subcontractor or assignee; and

E. Accessing, directly, the subcontractors and assignees, as the Contract Manager deems necessary.

XXI. This Contract may not be modified unless in writing signed by the Department and the Contractor.

XXII. The Department and the Contractor waive application of the principle of contract construction that ambiguities are to be construed against a contract's drafter, and agree that this Contract is their joint product.

XXIII. The Department and the Contractor acknowledge that they have had their respective attorneys review and approve this Contract or that they have had the opportunity to do so.

XXIV. This Contract shall be governed by the laws of the State of Florida, and venue for purposes of any action brought to enforce or construe the Contract shall lie in Leon County, Florida.

XXV. Failure of the Department to declare any default immediately upon the occurrence or knowledge thereof, or delay in taking any action in connection therewith, does not waive such default. The Department shall have the right to declare any such default at any time and take such action as might be lawful or authorized under the Contract, at law, or in equity. No Department waiver of any term, provision, condition or covenant of the Contract shall be deemed to imply or constitute a further Department waiver of any other term, provision, condition or covenant of the Contract, and no payment by the Department shall be deemed a waiver of any default under the Contract.

XXVI. Time is of the essence with regard to each and every obligation of the Contractor contained in the Contract. Each such obligation is deemed material, and a breach of any such obligation (including a breach resulting from the untimely performance thereof) shall constitute a material breach.

XXVII. The Contractor shall indemnify and hold harmless the Department, its attorneys, agents and employees, from and against any and all third party claims, suits, debts, damages, and causes of action, whatsoever, whether arising in law or in equity, arising out of or relating to Contractor performance or failure to perform under this Contract. The indemnification shall include reasonable attorney fees and costs incurred by the Department, its attorneys, agents and employees, in the defense of any such claim, suits or causes of action, as aforesaid.

XXVIII. This Contract may be cancelled by written agreement of the Department and the Contractor specifically referencing this Contract. Such agreement shall specify the remaining measures necessary to be taken by each party.

XXIX. The Department reserves the right to cancel this contract without cause by giving the Contractor thirty (30) days written notice.

XXX. Should Contractor fail to perform to Contract terms and conditions, Contractor shall be notified in writing, stating the nature of the failure to perform and providing a time certain (which shall be not less than ten (10) days following receipt of such notice) for correcting the failure. Such failure to perform shall otherwise be dealt within accordance with Rule 60A-1.006, F.A.C.

XXXI. A person or affiliate who has been placed on the convicted vendor list following a conviction for a public entity crime may not submit a bid on a contract to provide any goods or services to a public entity, may not submit a bid on a contract with a public entity for the construction or repair of a public building or public work, may not submit bids on leases of real property to a public entity, may not be awarded or perform work as a contractor, supplier, subcontractor, or consultant under a contract with any public entity, and may not transact business with any public entity in excess of the threshold amount provided in s. 287.017, F.S., for CATEGORY TWO for a period of thirty-six (36) months from the date of being placed on the convicted vendor list.

XXXII. The employment of unauthorized aliens by any contractor is considered a violation of Section 274A(e) of the Immigration and Nationality Act. If the contractor knowingly employs unauthorized aliens, such violation shall be cause for unilateral cancellation of the contract. In addition, pursuant to State of Florida Executive Order No. 11-116, Contractor shall utilize the U.S. Department of Homeland Security's E-Verify system to verify the employment of all new employees hired by the Contractor during the contract term. Also, Contractor shall include in related subcontracts a requirement that subcontractors performing work or providing services pursuant to the Contract utilize the E-Verify system to verify employment of all new employees hired by the subcontractor during the contract term.

XXXIII. Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – Lower Tier Covered Transactions

A. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency.

B. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal. The Department may cancel this contract if an attached explanation is not acceptable to the Department or the Federal government.

XXXIV MyFloridaMarketPlace

A. MyFloridaMarketplace Vendor Registration

Each Vendor doing business with the State of Florida for the sale of commodities or contractual services as defined in section 287.012, Florida Statutes, shall register in MyFloridaMarketPlace, in compliance with Rule 60A-1.030, Florida Administrative Code, unless exempt under Rule 60A-1.030(3) Florida Administrative Code.

B. MyFloridaMarketplace Transaction Fee

The State of Florida, through the Department of Management Services, has instituted MyFloridaMarketPlace, a statewide eProcurement system. Pursuant to section 287.057(23), Florida Statutes (2010), all payments for commodities and/or contractual services as defined in Section 287.012, Florida Statutes, shall be assessed a Transaction Fee of one percent (1.0%), which the Vendor shall pay to the State, unless exempt under Rule 60A-1.032, Florida Administrative Code. Notwithstanding the provisions of Rule 60A-1.030, et seq., the assessment of a transaction fee shall be contingent upon Federal approval of the transaction fee assessment program and continued payment of applicable federal matching funds.

For payments within the State accounting system (FLAIR or its successor), the Transaction Fee shall, when possible, be automatically deducted from payments to the Vendor. If automatic deduction is not possible, the Vendor shall pay the Transaction Fee pursuant to Rule 60A-1.031(2), Florida Administrative Code. By submission of these reports and corresponding payments, Vendor certifies their correctness. All such reports and payments shall be subject to audit by the State or its designee.

The Vendor shall receive a credit for any Transaction Fee paid by the Vendor for the purchase of any item(s) if such item(s) are returned to the Vendor through no fault, act, or omission of the Vendor. Notwithstanding the foregoing, a Transaction Fee is non-refundable when an item is rejected or returned, or declined, due to the Vendor's failure to perform or comply with specifications or requirements of the agreement.

Failure to comply with these requirements shall constitute grounds for declaring the Vendor in default and recovering reprocurement costs from the Vendor in addition to all outstanding fees. VENDORS DELINQUENT IN PAYING TRANSACTION FEES MAY BE EXCLUDED FROM CONDUCTING FUTURE BUSINESS WITH THE STATE.

Attachment 1
ITN 2014-47 Florida Standards Assessments

RESPONDENT:_____

We propose to provide the services being solicited for ITN 2014-47 Florida Standards Assessments. All work shall be performed in accordance with the specifications of this ITN, which has been reviewed and understood. **The below prices are all inclusive. Payment for services will be made based on the deliverables and dates specified. There shall be no additional costs charged for work performed under this ITN, unless changes are made during the negotiation phase.**

Respondents may submit bids on any individual assessment components (A, B, C or D), any group of assessment components, or to provide all assessment components (A, B, C and D). The prices on this sheet will be used for evaluation purposes. All accommodations and deliverable costs should be included in each component price. In addition, Respondents should complete the pricing per deliverable in SECTION 7.8, for each assessment component, which will be used for negotiation purposes and any resulting contract.

	PRICING							
ASSESSMENT COMPONENTS	**YEAR 1**	**YEAR 2**	**YEAR 3**	**TOTAL ORIGINAL CONTRACT TERM (YEARS 1 - 3)**	**RENEWAL YEAR 1**	**RENEWAL YEAR 2**	**RENEWAL YEAR 3**	**GRAND TOTAL (ORIGINAL TERM + ALL RENEWALS)***
A. Computer-based and paper-based assessments in English Language Arts/ Literacy in Grades 3-8 per schedule in Appendix A.								
B. Computer-based and paper-based assessments in Mathematics in Grades 3-8 per schedule in Appendix A.								
C. Computer-based and paper-based assessments in English Language Arts/Literacy in Grades 9-11 per schedule in Appendix A.								
D. Computer-based and paper-based End-of-Course (EOC) assessments in Algebra 1, Geometry, and Algebra 2 per schedule in Appendix A.								
E. All assessments (A-D) per schedule in Appendix A.								

* Evaluation points will be calculated on these costs.

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
57	Test Development	Periodic: Interpretive Products: Test Item Specifications Documents	Test item specifications will be produced for all grades/subjects and may be grouped together in one booklet by grade band or content area. They are based on the standards and define both the content and the format of the test items. Their primary purpose is to establish guidelines for test item writers and reviewers. ITN Reference 7.3.7.5	(1) Provide Department email reflecting approval of each test item specification document. (2) Final PDF files provided via SFTP.	November 1, 2015	
58	Test Development	Periodic: ELA/L and Mathematics Sample Scoring Guides	The contractor will be expected to post electronic publications that provide information to help educators understand the scoring of constructed-response items included on student reports. These publications provide information about the test design, standards and benchmarks, item types, and how items are scored. They also provide scoring rubrics and the annotated papers used to train scorers for the constructed-response items. Each sample item from the scoring papers is displayed as it appeared on the test and responses for each score point, images of student responses, and annotations explaining why the response received a particular score are provided. ITN Reference 7.3.10	(1) Provide Department email reflecting approval of each scoring guide. (2) Final PDF files provided via SFTP.	(Dates TBD - These should coincide with the approved report release dates, which are part of contract negotiations.) 2015

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
81	Test Development	Periodic: Onsite Test Construction	The contractor will host content experts and leadership from the Department for the express purpose of constructing assessments for all grades/courses and subjects. To the extent possible, the Department expects to be involved in any test construction activities for 2015 assessments still to be completed after contract execution (in July 2014). ITN Reference 7.3.7	1) Provide Department email reflecting completion of the test construction process (2) Appearance of completed schedule in weekly management report	July 15, 2014	
82					July 15, 2015	
83					July 15, 2016	
84					(Renewal 1 - July 15, 2017)	
85					(Renewal 2 - July 15, 2018)	
86					(Renewal 3 - July 15, 2019)	
87	Test Development	Periodic: Item Development Plan	To ensure the quality and number of items/passages developed is sufficient to create future operational test forms, the contractor will submit an item development plan delineating the number and types of items to be developed. ITN Reference 7.3.0	1) Provide Department email reflecting completion of the Item Development Plan. (2) Appearance of completed schedule in weekly management report.	December 1, 2015	
88					December 1, 2016	
89					(Renewal 1 - December 1, 2017)	
90					(Renewal 2 - December 1, 2018)	
91	Test Development	Periodic: Item Writer Training	The contractor must identify and recruit a sufficient number of highly-qualified writers for passages and items to ensure variety and quality of development. The contractor, in conjunction with the Department, will conduct an annual training session for all Item Writers. ITN Reference 7.3.3	1) Provide Department email reflecting completion of Item Writer Training. (2) Appearance of completed schedule in weekly management report.	December 1, 2015	
92					December 1, 2016	
93					(Renewal 1 - December 1, 2017)	
94					(Renewal 2 - December 1, 2018)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
95	Test Development	Periodic: Meetings with Educators	The contractor is responsible for organizing and convening meetings for the purpose of reviewing assessment items and otherwise supporting the assessment program. These meetings are referenced in the ITN in 7.3.4 and 7.7.7. This deliverable includes the cost of preparing for and administering the meeting, but it does not include the cost of travel for meeting participants, which is covered as a reimbursable category in 7.7.9.	(1) Include support for all meetings since the previous invoice. (2) Provide the meeting costs, a final agenda, and a final list of attendees for each meeting.	(Dates to be negotiated.) 2015	
96					2016	
97					2017	
98					(Renewal 1 - 2018)	
99					(Renewal 2 - 2019)	
100					(Renewal 3 - 2020)	
101	Test Development	Periodic: English-to-Language Translation Dictionary	The respondent's reply should describe the provision on the CBT system of an on-screen English-to-heritage language translation dictionary for English Language Learners. ITN Ref 7.3.11.2	(1) Provide evidence of Department acceptance and approval (email is acceptable) of the English-to-Language Translation Dictionary.	(TBD - Part of negotiation) 2015	
102					2016	
103					2017	
104					(Renewal 1 - 2018)	
105					(Renewal 2 - 2019)	
106					(Renewal 3 - 2020)	
107	Test Development	Periodic: English-to-Sign Language Translation Dictionary	The respondent's reply may describe the provision on the CBT system of an on-screen English-to-sign language translation dictionary. ITN Ref 7.3.11.2	(1) Provide evidence of Department acceptance and approval (email is acceptable) of the English-to-Sign Language Translation Dictionary.	(TBD - Part of negotiation) 2015	
108					2016

401					(Renewal 2 - August 2019)	
402					(Renewal 3 - August 2020)	
403	Test Administration	PERIODIC: Develop and deliver approved practice tests and tutorials for the computer-based and paper-based assessments (sample test materials and computer-based practice tests).	According to production schedules, all practice materials must be developed and approved on a timeline to be established that offers students enough time to practice prior to each administration. All practice tests (computer-based and paper-based) must contain 10-20 sample items. For the paper-based practice materials, there should be a separate test booklet and a separate answer key booklet for teachers. These paper-based practice materials are produced in ADA-compliant PDF files for posting. Practice materials must also be produced for all accommodated versions (computer-based accommodations and paper-based accommodations, such as braille and large print). ITN Reference 7.3.7.5 and 7.4.9.6	(1) Provide Department email reflecting approval of the practice tests and tutorials that reflect the requirements for each year of the assessment. For year 1 of the contract, this will be PDFs for all grades and subjects, and computer-based practice tests for all grades and subjects that will be offered as computer-based subjects the first year. As grades and subjects are added each year (per the schedule in Appendix A), the appropriate computer-based practice tests must also be released. This delivery includes the annual delivery of requested paper-based accommodated versions, which are the only versions that are shipped to districts. (All others are published or linked for distribution.)	November 2014	
404					November 2015	
405					November 2016	
406					(Renewal 1 - November 2017)	
407					(Renewal 2 - November 2018)	
408					(Renewal 3 - November 2019)	
409						
410	Test Administration	PERIODIC: Develop and deliver a training plan for the initial training and supply materials to support ongoing training for the audiences identified in the contract.	The contractor must train Department, district, and school staff on the setup, features, management, and use of the computer-based platform and online management system at the beginning of the contract. ITN Reference 7.4.7.1 and 7.4.9.8	(1) Provide Department email confirming and approving completion of the initial training and completion of the materials to support ongoing training. (2) Provide Department email approving the final, posted training materials for each administration.	September 2014

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
466	Test Administration	Summer EOC: Produce reports and recommendations from all online comment forms.	Includes data file of all responses, analysis, and recommended actions, with summary of selected response questions from all online comment forms. ITN Reference 7.4.1 and 7.4.7.7	(1) Provide Department email reflecting approval of the comment form summaries and analyses.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
467					2015	
468					2016	
469					2017	
470					(Renewal 1 - 2018)	
471					(Renewal 2 - 2019)	
472					(Renewal 3 - 2020)	
473	Test Administration	PERIODIC: Deliver the Infrastructure Trial Test	Develop and make available an infrastructure test, consisting of mock items, that replicates the size of the largest CBT and is run on the actual testing platform (i.e., users log in to the testing platform as if they were logging into a live test). ITN References 7.4.8 and 7.4.9.5	(1) Provide Department email reflecting approval of the final product and its availability. Product must be available at least 6 months prior to the first CBT administration. Updates to the test may be requested during the life of the contract, depending on its performance when used by school districts.	August 1, 2014	
474	Test Administration	Fall ELA/L Retake: Deliver Computer-Based Test forms (including accommodated versions)	Test forms are developed and available for use on the first day of each CBT administration ITN Reference 7.3.11.2	(1) Provide Department email reflecting approval of the final product and its availability.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
475					2015	
476					2016	
477					(Renewal 1- 2017)	
478					(Renewal 2-2018)	
479					(Renewal 3 - 2019)	
480	Test Administration	Spring ELA/L Retake: Computer-Based Test form delivery (including accommodated versions)	Test forms are developed and available for use on the first day of each CBT administration ITN Reference 7.3.11.2	(1) Provide Department email reflecting approval of the final product and its availability.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
481					2016	
482					2017	
483					(Renewal 1 - 2018)	
484					(Renewal 2 - 2019)	
485					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
684	Scoring and Reporting	Fall ELA/L Retake: Early district and full-state scan/edit and CBT extract data files: Development of the file layouts, scan/edit and CBT extract data files	The contractor will work with the Department to develop the layouts for scan/edit and CBT extract data files. For each administration, the contractor unpacks and scans the documents to be scored and provides the scan files by grades for ELA/L and Mathematics and by subject for EOC. The Edited scanned data are loaded to online management system with the extracts for any CBT data. Additional processing is performed to resolve PreID data with gridded data, invoke any defaults necessary, and make some transformations for final scoring and creation of the State Student Results file during the editing process. ITN References 7.5.3, 7.5.6.2, and 7.5.6.4	(1) Final approved file layouts, early/full state scan/edit, and CBT extract data files, posted to online management system and SFTP. (2) Provide Department email reflecting receipt and approval of the file layouts and data files.	October 2015	
685					October 2016

Both paper-based and computer-based tests will contain performance tasks, and so the Contractor must have the capability to score both hand-written and key-entered student responses. The Department requires handscoring processes that are reliable and valid, as well as efficient in terms of time and expenditures. The handscoring process must follow the handscoring specifications. The final handscoring report, as described in the ITN, is required as evidence for payment. ITN Reference 7.5.4.5	(1) Provide Department email reflecting approval of the final handscoring report.	See Appendix B. Dates to be determined as part of contract negotiation.2015	
1131					2016	
1132					(Renewal 1 - 2017)	
1133					(Renewal 2 - 2018)	
1134					(Renewal 3 - 2019)	
1135	Scoring and Reporting	Spring EOC: Handscoring of Performance Tasks	Handscoring refers to the processes necessary for determining the rating of a student's response on the writing prompts or on the performance-based tasks in ELA/L and Mathematics that respondents may propose. Both paper-based and computer-based tests will contain performance tasks, and so the Contractor must have the capability to score both hand-written and key-entered student responses. The Department requires handscoring processes that are reliable and valid, as well as efficient in terms of time and expenditures. The handscoring process must follow the handscoring specifications. The final handscoring report, as described in the ITN, is required as evidence for payment. ITN Reference 7.5.4.5	(1) Provide Department email reflecting approval of the final handscoring report. 1263					(Renewal 2 - April 2019)	
1264					(Renewal 3 - April 2020)	
1265	Scoring and Reporting	Summer EOC: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	July 2015	
1266					July 2016	
1267					July 2017	
1268					(Renewal 1 - July 2018)	
1269					(Renewal 2 - July 2019)	
1270					(Renewal 3 - July 2020)	
1271	Scoring and Reporting	Periodic: Writing Image CD/DVD or jump drives and proof to delivery: Development of the Writing Image CD/DVD or jump drives.	The contractor will create and ship Writing images for all students who submitted a folder to be scored and ship these CDs to the districts with one CD/DVD or jump drives for each grade tested. The contractor will submit proof of delivery to the Department after all of the Writing Image CD/DVD or jump drives are delivered to districts. ITN Reference 7.5.5	1) Provide Department email reflecting receipt and approval of the sample CD/DVD or jump drives. (2) Provide proof of delivery spreadsheet listing the following for each shipment: date/time delivered, who received materials, destination address, quantity and type of material delivered. Must show proof of successful delivery to all participating districts.	July 2015	
1272					July 2016	
1273					July 2017	
1274					(Renewal 1 - July 2018)	
1275					(Renewal 2 - July 2019)	
1276					(Renewal 3 - July 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1277	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the Test Construction Specifications	The Contractor will deliver Test Construction Specifications for ELA/Literacy and Mathematics, Algebra 1, Algebra 2, Geometry, and Retake Assessments. The final specifications shall be evaluated and approved by the Department. To the extent possible, the Department expects to be involved in any test construction activities for 2015 assessments still to be completed after contract execution. ITN Reference 7.6.0, 7.6.1, and 7.6.2	(1) Test Construction Specifications are secure, and therefore the Contractor shall provide a report which indicates the completed status of Specifications posted to Secure File Transfer Protocol (SFTP). (2) Provide Department email reflecting receipt and approval of the Test Construction Specifications.	May 2014	
1278					May 2015	
1279					May 2016	
1280					(Renewal 1 - May 2017)	
1281					(Renewal 2 - May 2018)	
1282					(Renewal 3 - May 2019)	
1283	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Test Forms for Field Test and/or Operational Administrations	All paper-based and computer-based forms for the tests, as agreed upon by the Department and memorialized in the approved Test Construction Specifications, must be submitted and approved. ITN Reference 7.6.0 and 7.6.1	(1) Test forms are secure, and therefore the contractor shall post them to SFTP. The Department shall maintain a copy of the materials on file as needed for evidence of completion of the deliverable. (2) Provide Department email reflecting receipt and approval of the final paper-based and computer-based forms.	July 2014	
1284					July 2015	
1285					July 2016	
1286					(Renewal 1 - July 2017)	
1287					(Renewal 2 - July 2018)	
1288					(Renewal 3 - July 2019)	
1289	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the Sampling Plans	Detailed plan for sampling of students from the State. Sampling plan must describe the initial analyses on the SSR files, introducing plans for how to collect data, and the list of post-hoc analyses for representativeness checks when data from test administrations are in for operational processing. ITN Reference 7.6.2.2	(1) Final versions of sampling plans posted to SFTP. (2) Provide Department email reflecting receipt and approval of the sampling plans.	July 2014	
1290					July 2015	
1291					July 2016	
1292					(Renewal 1 - July 2017)	
1293					(Renewal 2 - July 2018)	
1294					(Renewal 3 - July 2019)	
1295	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Drawing Samples for Operational and/or Field Test Administrations	Delivering the data files including sampled units from the populations and the respective reports. Sampling report must describe the initial analyses on the SSR files, procedures for how to collect data, evaluate the representativeness of resulting sample and a list of post-hoc analyses for representativeness checks when data from test administrations are in for operational processing. ITN Reference 7.6.0, 7.6.1, and 7.6.2.2	(1) Data files, including sampled units from the populations, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the samples.	August 2014	
1296					August 2015	
1297					August 2016	
1298					(Renewal 1 - August 2017)	
1299					(Renewal 2 - August 2018)	
1300					(Renewal 3 - August 2019)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1301	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the SES Specifications	Preparing a detailed plan for conducting all scaling and equating plans and procedures, scoring plans and procedures. The plan should include a comprehensive and detailed timeline for all tasks and events. The plan should also provide a detailed description of the outcomes produced from the operational and/or field test SES activities, including data files and reports. The plan must be vetted by TAC members. ITN Reference 7.6.2.1	(1) SES Specifications (secure) posted to SFTP. (2) Provide Department email reflecting receipt and approval of the SES Specifications.	December 2014	
1302					December 2015	
1303					December 2016	
1304					(Renewal 1 - December 2017)	
1305					(Renewal 2 - December 2018)	
1306					(Renewal 3 - December 2019)	
1307	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing SES Activities	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.0, 7.6.1, and 7.6.2	(1) Submit Final Scaled Item Parameter Estimates and Scored Files (secure files) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the files.	May 2015	
1308					May 2016	
1309					May 2017	
1310					(Renewal 1 - May 2018)	
1311					(Renewal 2 - May 2019)	
1312					(Renewal 3 -May 2020)	
1313	Scaling, Equating, Scoring, and Special Psychometric Studies	Spring ELA/L and Mathematics: Develop Calibration Sampling Specifications	The contractor's sampling specifications must include analyzing the most recent SSR files and establishing a road map for gathering the required data proven to represent the demographic characteristics of the state and student performance. The specifications will also address the steps, procedures, and software required for replication of the sampling procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration. ITN Reference 7.6.2.2	(1) Submit final Calibration Sampling Specifications via SFTP. (2) Provide Department email reflecting receipt and approval of the specifications.	(Dates to be negotiated) 2015	
1314					2016	
1315					2017	
1316					(Renewal 1 - 2018)	
1317					(Renewal 2 - 2019)	
1318					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1319	Scaling, Equating, Scoring, and Special Psychometric Studies	Spring EOC: Develop Calibration Sampling Specifications	The contractor's sampling specifications must include analyzing the most recent SSR files and establishing a road map for gathering the required data proven to represent the demographic characteristics of the state and student performance. The specifications will also address the steps, procedures, and software required for replication of the sampling procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration. ITN Reference 7.6.2.2	(1) Submit final Calibration Sampling Specifications via SFTP. (2) Provide Department email reflecting receipt and approval of the specifications.	(Dates to be negotiated) 2015	
1320					2016	
1321					2017	
1322					(Renewal 1 - 2018)	
1323					(Renewal 2 - 2019)	
1324					(Renewal 3 - 2020)	
1325	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Creating and Finalizing Technical Reports	Preparing Technical Reports, as described in section 7.6.3.2. Note that Table of contents listed in 7.6.3.2 includes the minimum requirements for the report. Collecting Feedback from the Department and Technical Advisory Committee (TAC), finalizing the reports after incorporating the feedback, and submitting the final versions of the reports to the Department. ITN Reference 7.6.3.2	(1) Submit initial versions and the final versions of Technical Reports (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the technical reports.	December 2015	
1326					December 2016	
1327					December 2017	
1328					(Renewal 1 - December 2018)	
1329					(Renewal 2 - December 2019)	
1330					(Renewal 3 - December 2020)	
1331	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Linking Plan: Scale Linking Plan for transitioning from FCAT 2.0 Reading & Mathematics and EOC Algebra 1 & Geometry to the Florida Standards Assessments	Scale Linking Plan for transitioning from FCAT 2.0 Reading & Mathematics and EOC Algebra 1 & Geometry to the Florida Standards Assessments ITN Reference 7.6.3.3	(1) Submit initial versions and the final versions of Scale Linking Plans (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the linking plans.	November 2014	
1332						
1333	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Linking Plan: Collecting Legal Opinion	Collecting legal opinion, subject to the Department's approval, about the defensibility of linking methodology. ITN Reference 7.6.3.3	(1) Submit final version of the legal opinion document (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the linking plans.	October 2014	
1334						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1335	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Scales during transitioning years to find out FCAT 2.0 and EOC equivalents based on the performance of students on the Florida Standards Assessments	Conducting all linking operations and scoring activities as laid out in the approved linking specifications. ITN Reference 7.6.3.3	(1) Submit final look-up tables and scored files (secure files) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the files.	May 2015	
1336						
1337	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Standard Setting Work Plan	Prepare a Standard Setting Work plan for setting achievement level standards for ELA/Literacy, Mathematics, Algebra 1 &2, and Geometry assessments. Plan must include every detail of the methodology, internal and external data files, and the timeline for all of the activities during educator and reactor panel meetings. The Plan must be vetted by TAC members and the methodology must be approved by the department. ITN Reference 7.6.3.4	(1) Submit the final version of Standard Setting Work Plan and relevant materials, such as slides (secure materials), posted to SFTP. (2) Provide Department email reflecting receipt and approval of the documents.	January 2015	
1338	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Implement Achievement Level Standard Setting Meetings	Hold the required meetings and collect recommended cut scores from all relevant groups, as described in ITN Reference 7.6.3.4	(1) Submit the initial version of the Standard Setting Technical Report (secure file), including recommended cuts and impact data, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.	October 2015	
1339	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Finalizing Standard Setting Technical Report	Preparing Technical Reports, as described in section 7.6.3.4. Collecting Feedback from the Department and Technical Advisory Committee (TAC), finalizing the reports after incorporating the feedback, and submitting the final versions of the reports to the Department. ITN Reference 7.6.3.4	(1) Submit the final version of the Standard Setting Technical Report (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.	November 2015	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1340	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Vertical Scaling Specifications	Preparing a detailed plan for conducting all vertical scaling procedures. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.5 The plan must be vetted by TAC members. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Post the plan for Vertical Scaling (secure file) via SFTP. (2) Provide Department email reflecting receipt and approval of the Vertical Specifications.	November 2014	
1341					(Renewal 1 - November 2017)	
1342	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Vertical Scaling Activities and Preparing Technical Report	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Submit Final Technical Report and Scored SSR Files (secure files), including vertically aligned scale scores, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2015	
1343					(Renewal 2 - August 2018)	
1344	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Drift Study Specifications	Preparing a detailed plan for conducting scale drift study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.6 The plan must be vetted by TAC members. ITN Reference 7.6.3.6	(1) Submit the plan for conducting the scale drift study (secure) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the scale drift study specifications.	(Renewal 1 - July 2017)	
1345						
1346	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Scale Drift Research and Preparing Technical Report	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.3.6	(1) Submit Final Technical Report and rescaled item parameters (secure files) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	(Renewal 2 - August 2018)	
1347						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1348	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Specifications for Comparability Between Devices Delivering Assessments	Preparing a detailed plan for conducting comparability study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.7 The plan must be vetted by TAC members. The plan should include the degree of comparability of item-level and test-level statistics across devices. The plan should include the degree of comparability of item-level and test-level statistics across various input types. For the questions above, the plan should address to what degree of comparability can be obtained through scaling items onto a single metric, linking or concordance. The plan should also include what interactions exist among device, input type and item/task characteristics, grade, subject, and relevant student characteristics. ITN Reference 7.6.3.6.1	(1) Submit the plan for conducting the comparability study (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2014	
1349						
1350	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Study for Comparability Between Devices Delivering Assessments, Preparing its Final Report, and Recommendations with TAC Committee	Conducting all of the planned analyses, preparing its technical report, and sharing the findings and recommendations with TAC members. ITN Reference 7.6.3.6.1	(1) Submit Final Report and Recommendations to the Department. These materials are secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2015	
1351						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1352	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of a study plan for linking Florida Standards Assessments to other assessments measuring the same standards	Preparing a detailed plan for conducting the linking study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.8 The plan must be vetted by TAC members. The plan should include a review of the most promising and most feasible methods in linking, discuss the technical feasibility of such methods, and explain the process of establishing the linking relationship(s) in detail. ITN Reference 7.6.3.6.2	(1) The plan for conducting comparability study is secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2015	
1353						
1354	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Florida Standards Assessments to other assessments	Conducting all of the planned analyses, preparing a final technical report, and sharing the results of linked relationships with TAC committee to discuss the validity of interpretations. ITN Reference 7.6.3.6.2	(1) Submit Final Report and Recommendations (secure files) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2016	
1355						
1356	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of a study plan for the linking Florida Standards Assessments to International Assessments	The Contractor's plan will include, review of the most promising and most feasible methods likely to be used in international linking, discuss the technical feasibility of each method given the nature and design of the Florida Standards Assessments and those of international assessments such as PISA and TIMSS, propose method(s) for linking the scales of assessments, propose alternative ways for collecting data, explain the process of establishing the linking relationship(s) in detail, and provide a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.9. The contractor will share the report with the Department and its TAC members. Upon approval from the Department, the contractor will finalize the plan for the linking. ITN Reference 7.6.3.6.3	(1) The plan for conducting the linking study is secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2015	
1357						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1358	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Florida Standards Assessments to International Assessments	Conducting all of the planned analyses, preparing a final technical report, and sharing the results of linked relationships with TAC committee to discuss the validity of interpretations. ITN Reference 7.6.3.6.3	(1) Submit Final Report and Recommendations to the Department. These materials are secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2016	
1359						
1360	Program Management	Periodic: Production Schedule	The production schedule shows the Department's beginning and ending review dates by test document for each review round. ITN Reference 7.7.2	(1) Appearance of schedule in weekly management report (2) Provide Department email reflecting approval of proposed or revised production schedule.	April 15, 2014	
1361					April 15, 2015	
1362					April 15, 2016	
1363					(Renewal 1 - April 15, 2017)	
1364					(Renewal 2 - April 15, 2018)	
1365					(Renewal 3 - April 15, 2019)	
1366	Program Management	Periodic: Program Management Meetings	The contractor will coordinate regular management meetings between the contractor and Department staff. The number and type of meetings are provided in 7.7.5 of the ITN.	(1) Include support for all meetings since the previous invoice. (2) Provide the meeting costs, a final agenda, and a final list of attendees for each meeting.	2015	
1367					2016	
1368					2017	
1369					(Renewal 1 - 2018)	
1370					(Renewal 2 - 2019)	
1371					(Renewal 3 - 2020)	
1372	Program Management	Periodic: Program Management Staff	The work described in the ITN constitutes a large, complex, challenging program that requires year-round activity and close attention to overlapping tasks for different years and the impact on project resources. The contractor is expected to provide a sufficient number of highly-qualified personnel to work closely with the Department to manage the contract. Specific requirements are in 7.7.2 of the ITN.	(1) Include support for program management staff operational for the invoice period. (2) Provide an organization chart with the appropriate staff indicated for each invoice period. (Quarterly invoices to occur in February, May, August, and November)	2015	
1373					2016	
1374					2017	
1375					(Renewal 1 - 2018)	
1376					(Renewal 2 - 2019)	
1377					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1378	Program Management	Periodic: Program Management Reports: Weekly Management and Action Item Report	The Weekly Management Report and Action Item Report will report the status of recent and upcoming tasks, highlighting those leading up to deliverables and critical tasks, report progress on program issues, identify unresolved issues, and maintain a list of requests requiring change orders or amendments. The weekly report will be provided to the Department by no later than noon one day prior to the weekly program management conference calls and will reflect the previous week's work. ITN Ref 7.7.6	(1) For each invoice period, provide one management report from each month since the previous invoice period. (Quarterly invoices to occur in February, May, August, and November)	2014	
1379					2015	
1380					2016	
1381					(Renewal 1 - 2017)	
1382					(Renewal 2 - 2018)	
1383					(Renewal 3 - 2019)	
1384	Program Management	Periodic: Annual Program Review	Review will include a record of the contractor's services and deliverables in response to contractual/ITN requirements. This review must identify major program accomplishments and successes, as well as areas of the program that require changes and improvement in the upcoming year. The review is intended to be a history of program events and to describe recommended improvements or changes for subsequent years. The annual review will be based on information gathered by the contractor's program and project management staff throughout the year. The review will address all aspects of program service and products including management, technology, interpretive products, communications, development, test production, test administration, materials shipping/pickup, scoring, and reporting processes. It will also follow the annual administrative cycle, beginning with fall and ending with the following summer. ITN Reference 7.7.6	(1) Provide evidence of Department acceptance and approval of the annual program review for the previous administration year.	November 2015	
1385					November 2016	
1386					November 2017	
1387					(Renewal 1 - November 2018)	
1388					(Renewal 2 - November 2019)	
1389					(Renewal 3 - November 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1390	Program Management	Periodic: Program Management Reports: Collect Accounting Reports	A summary of the Quarterly Accounting Reports, including expenditures by program task and level of effort as well as expenditures and balances of Reimbursable Funding Categories identified in Section 7.7.9, including balances resulting from executed change orders and contract amendments. ITN Ref 7.7.6	(1) For each invoice period, provide the quarterly accounting reports. (Quarterly invoices to occur in February, May, August, and November)	2014	
1391					2015	
1392					2016	
1393					(Renewal 1 - 2017)	
1394					(Renewal 2 - 2018)	
1395					(Renewal 3 - 2019)	
1396	Program Management	Periodic: Final Delivery of Materials	The contractor agrees to deliver to the Department, upon request, all materials and products in all forms that are developed for and used in conjunction with this program, including test books, answer documents (paper and PDF), final electronic source files of interpretive products, software source code, and ancillary materials, PDFs, and electronic files within 30 days following acceptance by the Department of the final report for the program. ITN Ref. 7.7.10	(1) Provide evidence of Department acceptance and approval (email is acceptable) of the final program report and acceptance of all materials.	[TBD - either November 2017, November 2018, November 2019, or November 2020, depending on whether the base is extended into one, two, or three one-year renewals]	

Contract #14-652

Attachment G

American Institutes for Research

Addendums: 1, 2 and 3

FLORIDA DEPARTMENT OF EDUCATION

BUREAU OF CONTRACTS, GRANTS AND PROCUREMENT MANAGEMENT SERVICES
325 West Gaines Street
332 Turlington Building
Tallahassee, Florida 32399-0400

Addendum # 1

REPLY NO.: ITN 2014-47
Florida Standards Assessments

OCTOBER 31, 2013

This addendum is issued to provide applicable changes to the above referenced ITN.

Section 7.8 DELIVERABLES 8 ½" x 14" document hereby replaces the current 7.8 DELIVERABLES 8 ½" x 11" document due to formatting issues. To obtain a copy of 7.8 DELIVERABLES in Microsoft Excel format, send an email request to the Purchasing Analyst as instructed in Section 4.3.

Potential proposers have 72 hours from posting of addenda to protest the requirements of each addendum. Failure to file a protest within the time prescribed in Section 120.57(3), or failure to post the bond or other security required by law within the time allowed for filing a bond shall constitute a waiver of proceedings under Chapter 120, Florida Statutes.

YOUR REPLY WILL NOT BE COMPLETE WITHOUT THIS DOCUMENT SIGNED AND INCLUDED!

44					(Renewal 3 - 2020)
45	Test Development	Summer EOC: Handscoring Specifications	The contractor should incorporate the handscoring requirements into written handscoring specifications prior to scoring. The handscoring specifications will be a detailed guide to conducting handscoring that will be used by the contractor's handscoring managers and the Department. The applicable administrations/assessments will be determined in the final negotiations. ITN Reference 7.5.4.5	(1) Provide Department email reflecting approval of the final handscoring specifications. (2) The final handscoring specifications provided via SFTP.	Dates to be negotiated 2015
46					2016
47					2017
48					(Renewal 1 - 2018)
49					(Renewal 2 - 2019)
50					(Renewal 3 - 2020)
51	Test Development	Periodic: Style guide for test items	This document is designed to provide a consistent grammar and style standard for the proofing and editing of ELA/L and Mathematics test materials. The document may be included as part of the production specifications document. ITN Reference 7.3.10	(1) Provide Department email reflecting approval of the final style guide document. (2) The final style guide file provided via SFTP.	June 1, 2014
52					June 1, 2015
53					June 1, 2016
54					(Renewal 1 - June 1, 2017)
55					(Renewal 2 - June 1, 2018)
56					(Renewal 3 - June 1, 2019)

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
57	Test Development	Periodic: Interpretive Products: Test Item Specifications Documents	Test item specifications will be produced for all grades/subjects and may be grouped together in one booklet by grade band or content area. They are based on the standards and define both the content and the format of the test items. Their primary purpose is to establish guidelines for test item writers and reviewers. ITN Reference 7.3.7.5	(1) Provide Department email reflecting approval of each test item specification document. (2) Final PDF files provided via SFTP.	November 1, 2015
58	Test Development	Periodic: ELA/L and Mathematics Sample Scoring Guides	The contractor will be expected to post electronic publications that provide information to help educators understand the scoring of constructed-response items included on student reports. These publications provide information about the test design, standards and benchmarks, item types, and how items are scored. They also provide scoring rubrics and the annotated papers used to train scorers for the constructed-response items. Each sample item from the scoring papers is displayed as it appeared on the test and responses for each score point, images of student responses, and annotations explaining why the response received a particular score are provided. ITN Reference 7.3.10	(1) Provide Department email reflecting approval of each scoring guide. (2) Final PDF files provided via SFTP.	(Dates TBD - These should coincide with the approved report release dates, which are part of contract negotiations.) 2015
59					2016
60					2017
61					(Renewal 1 - 2018)
62					(Renewal 2 - 2019)
63					(Renewal 3 - 2020)
64	Test Development	Periodic: Understanding Florida's Assessment Reports	This publication describes the various reports of test results distributed to students, schools, and districts. An explanation and an image of each type of report are provided. The booklet also includes information about the test content areas and a glossary of technical terms. The contractor will deliver the electronic ADA-compliant PDF for posting to the DOE website so files can be posted to coincide with the first results delivery (RD1). ITN Reference 7.3.7.5	(1) Provide Department email reflecting approval of Understanding Florida's Assessment Reports. (2) Final PDF files provided via SFTP.	(Dates TBD - These should coincide with the approved report release dates, which are part of contract negotiations.) 2015

1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
70	Test Development	Periodic: Test Design and Blueprint	The Test Design and Blueprint will clearly delineate the number of items, types and placement of items, time allotted for each test session, and location of field-test items for all grades and subjects. ITN Reference 7.3.1 and 7.3.2.1	(1) Provide Department email reflecting approval of Test Design and Blueprint (2) Appearance of completed schedule in weekly management report	June 1, 2015
71	Test Development	Periodic: Content Item Review "Cleans"	After Content Item Review, the contractor, in conjunction with the Department, will conduct an editorial and content review of the items to ensure that changes have been applied correctly and that all editorial and content issues are corrected. ITN Reference 7.3.4.2	(1) Provide Department email reflecting completion of the “Cleans” process (2) Appearance of completed schedule in weekly management report	February 1, 2016
72					February 1, 2017
73					(Renewal 1 - February 1, 2018)
74					(Renewal 2 - February 1, 2019)
75					(Renewal 3 - February 1, 2020)
76	Test Development	Periodic: Field Test Item Sets and Forms Review	Whether an embedded or stand-alone model is used, the contractor, in conjunction with the Department, will construct field-test forms. ITN Reference 7.3.5 and 7.3.6	(1) Provide Department email reflecting completion of the field test forms process (2) Appearance of completed schedule in weekly management report	May 1, 2015
77					May 1, 2016
78					(Renewal 1 - May 1, 2017)
79					(Renewal 2 - May 1, 2018)
80					(Renewal 3 - May 1, 2019)

1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
81	Test Development	Periodic: Onsite Test Construction	The contractor will host content experts and leadership from the Department for the express purpose of constructing assessments for all grades/courses and subjects. To the extent possible, the Department expects to be involved in any test construction activities for 2015 assessments still to be completed after contract execution (in July 2014). ITN Reference 7.3.7	1) Provide Department email reflecting completion of the test construction process (2) Appearance of completed schedule in weekly management report	July 15, 2014
82					July 15, 2015
83					July 15, 2016
84					(Renewal 1 - July 15, 2017)
85					(Renewal 2 - July 15, 2018)
86					(Renewal 3 - July 15, 2019)
87	Test Development	Periodic: Item Development Plan	To ensure the quality and number of items/passages developed is sufficient to create future operational test forms, the contractor will submit an item development plan delineating the number and types of items to be developed. ITN Reference 7.3.0	1) Provide Department email reflecting completion of the Item Development Plan. (2) Appearance of completed schedule in weekly management report.	December 1, 2015
88					December 1, 2016
89					(Renewal 1 - December 1, 2017)
90					(Renewal 2 - December 1, 2018)
91	Test Development	Periodic: Item Writer Training	The contractor must identify and recruit a sufficient number of highly-qualified writers for passages and items to ensure variety and quality of development. The contractor, in conjunction with the Department, will conduct an annual training session for all Item Writers. ITN Reference 7.3.3	1) Provide Department email reflecting completion of Item Writer Training. (2) Appearance of completed schedule in weekly management report.	December 1, 2015
92					December 1, 2016
93					(Renewal 1 - December 1, 2017)
94					(Renewal 2 - December 1, 2018)

1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
95	Test Development	Periodic: Meetings with Educators	The contractor is responsible for organizing and convening meetings for the purpose of reviewing assessment items and otherwise supporting the assessment program. These meetings are referenced in the ITN in 7.3.4 and 7.7.7. This deliverable includes the cost of preparing for and administering the meeting, but it does not include the cost of travel for meeting participants, which is covered as a reimbursable category in 7.7.9.	(1) Include support for all meetings since the previous invoice. (2) Provide the meeting costs, a final agenda, and a final list of attendees for each meeting.	(Dates to be negotiated.) 2015
96					2016
97					2017
98					(Renewal 1 - 2018)
99					(Renewal 2 - 2019)
100					(Renewal 3 - 2020)
101	Test Development	Periodic: English-to-Language Translation Dictionary	The respondent's reply should describe the provision on the CBT system of an on-screen English-to-heritage language translation dictionary for English Language Learners. ITN Ref 7.3.11.2	(1) Provide evidence of Department acceptance and approval (email is acceptable) of the English-to-Language Translation Dictionary.	(TBD - Part of negotiation) 2015

398					August 2016
399					August 2017
400					(Renewal 1 - August 2018)
401					(Renewal 2 - August 2019)
402					(Renewal 3 - August 2020)
403	Test Administration	PERIODIC: Develop and deliver approved practice tests and tutorials for the computer-based and paper-based assessments (sample test materials and computer-based practice tests).	According to production schedules, all practice materials must be developed and approved on a timeline to be established that offers students enough time to practice prior to each administration. All practice tests (computer-based and paper-based) must contain 10-20 sample items. For the paper-based practice materials, there should be a separate test booklet and a separate answer key booklet for teachers. These paper-based practice materials are produced in ADA-compliant PDF files for posting. Practice materials must also be produced for all accommodated versions (computer-based accommodations and paper-based accommodations, such as braille and large print). ITN Reference 7.3.7.5 and 7.4.9.6	(1) Provide Department email reflecting approval of the practice tests and tutorials that reflect the requirements for each year of the assessment. For year 1 of the contract, this will be PDFs for all grades and subjects, and computer-based practice tests for all grades and subjects that will be offered as computer-based subjects the first year. As grades and subjects are added each year (per the schedule in Appendix A), the appropriate computer-based practice tests must also be released. This delivery includes the annual delivery of requested paper-based accommodated versions, which are the only versions that are shipped to districts. (All others are published or linked for distribution.)	November 2014
404					November 2015
405					November 2016
406					(Renewal 1 - November 2017)
407					(Renewal 2 - November 2018)
408					(Renewal 3 - November 2019)
409					
410	Test Administration	PERIODIC: Develop and deliver a training plan for the initial training and supply materials to support ongoing training for the audiences identified in the contract.	The contractor must train Department, district, and school staff on the setup, features, management, and use of the computer-based platform and online management system at the beginning of the contract. ITN Reference 7.4.7.1 and 7.4.9.8	(1) Provide Department email confirming and approving completion of the initial training and completion of the materials to support ongoing training. (2) Provide Department email approving the final, posted training materials for each administration.	September 2014

	A	B	C	D	E

411	Test Administration	PERIODIC: Develop and deliver materials to support ongoing training for the audiences identified in the contract.	The contractor must train Department, district, and school staff on the setup, features, management, and use of the computer-based platform and online management system. ITN Reference 7.4.7.1 and 7.4.9.8	(1) Provide Department email approving the final, posted training materials for each administration.	August 2015
412					August 2016
413					(Renewal 1 - August 2017)
414					(Renewal 2 - August 2018)
415					(Renewal 3 - August 2019)
416	Test Administration	PERIODIC: Provide customer service throughout the year, with additional customer service provided at peak times leading up to and following each test administration.	The contractor will provide customer service and provide call/email logs from each week to the Department for review. ITN Reference 7.4.10	(1) Provide a report listing met requirements and any (or no) errors or unavailability of the customer service system that occurred during the period, signed by the Department team. Invoice at the end of each assessment year (end of Summer EOC administration) for the assessments from the previous year.	November 2015
417					November 2016
418					November 2017
419					(Renewal 1 - November 2018)
420					(Renewal 2 - November 2019)
421					(Renewal 3 - November 2020)
422	Test Administration	PERIODIC: Inventory, store, and destroy used and unused test materials as described in the contract.	The contractor will inventory and store unused test and answer books, manuals, and other materials for a period of at least six months, and used documents containing student responses for a period of two years. Destruction of secure documents must be requested in writing and authorized by the Department. ITN Reference 7.4.3	(1) Provide Department approval to destroy the materials and evidence of destruction. Invoice at the end of each assessment year (end of Summer EOC administration) for the assessments from that year.	November 2015
423					November 2016
424					November 2017
425					(Renewal 1 - November 2018)

684	Scoring and Reporting	Fall ELA/L Retake: Early district and full-state scan/edit and CBT extract data files: Development of the file layouts, scan/edit and CBT extract data files	The contractor will work with the Department to develop the layouts for scan/edit and CBT extract data files. For each administration, the contractor unpacks and scans the documents to be scored and provides the scan files by grades for ELA/L and Mathematics and by subject for EOC. The Edited scanned data are loaded to online management system with the extracts for any CBT data. Additional processing is performed to resolve PreID data with gridded data, invoke any defaults necessary, and make some transformations for final scoring and creation of the State Student Results file during the editing process. ITN References 7.5.3, 7.5.6.2, and 7.5.6.4	(1) Final approved file layouts, early/full state scan/edit, and CBT extract data files, posted to online management system and SFTP. (2) Provide Department email reflecting receipt and approval of the file layouts and data files.	October 2015

1020	Scoring and Reporting	Spring EOC: Performance Task Reports and proof of delivery: Development of the hard copy of the Performance Tasks reports	For each test administration, the student report will include a student's written response to selected performance tasks in each subject that contains the performance task. The responses will be reproduced on a separate page that includes an explanation of the tasks and the scoring criteria. The contractor will print and deliver performance task reports. Submit proof of delivery to the Department after all reports and media are delivered to the districts. ITN Reference 7.5.5	(1) Provide Department email reflecting receipt and approval of the samples of the performance task reports. (2) Provide proof of delivery spreadsheet listing the following for each shipment: date/time delivered, who received materials, destination address, quantity and type of material delivered. Must show proof of successful delivery to all participating districts.	See Appendix B. Dates to be determined as part of contract negotiation. 2015

1108	Scoring and Reporting	Fall ELA/L Retake: Handscoring of Performance Tasks	Handscoring refers to the processes necessary for determining the rating of a student's response on the writing prompts or on the performance-based tasks in ELA/L and Mathematics that respondents may propose. Both paper-based and computer-based tests will contain performance tasks, and so the Contractor must have the capability to score both hand-written and key-entered student responses. The Department requires handscoring processes that are reliable and valid, as well as efficient in terms of time and expenditures. The handscoring process must follow the handscoring specifications. The final handscoring report, as described in the ITN, is required as evidence for payment. ITN Reference 7.5.4.5	(1) Provide Department email reflecting approval of the final handscoring report. 1188					(Renewal 2 - December 2018)
1189					(Renewal 3 - December 2019)
1190	Scoring and Reporting	Spring ELA/L Retake: Development of the history files for EOC and ELA/Mathematics	The contractor will create and update history files after each test administration using the requirements specified in the SR specifications. ITN Reference 7.5.4.2	(1) History files posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the history data files.	October 2016
1191					October 2017
1192					(Renewal 1 - October 2018)
1193					(Renewal 2 - October 2019)
1194					(Renewal 3 - October 2020)

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1195	Scoring and Reporting	Spring ELA/L and Mathematics: Development of the history files for EOC and ELA/Mathematics	The contractor will create and update history files after each test administration using the requirements specified in the SR specifications. ITN Reference 7.5.4.2	(1) History files posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the history data files.	October 2015
1196					October 2016
1197					October 2017
1198					(Renewal 1 - October 2018)
1199					(Renewal 2 - October 2019)
1200					(Renewal 3 - October 2020)
1201	Scoring and Reporting	Fall EOC: Development of the history files for EOC and ELA/Mathematics	The contractor will create and update history files after each test administration using the requirements specified in the SR specifications. ITN Reference 7.5.4.2	(1) History files posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the history data files.	December 2015
1202					December 2016
1203					(Renewal 1 - December 2017)
1204					(Renewal 2 - December 2018)
1205					(Renewal 3 - December 2019)
1206	Scoring and Reporting	Winter EOC: Development of the history files for EOC and ELA/Mathematics	The contractor will create and update history files after each test administration using the requirements specified in the SR specifications. ITN Reference 7.5.4.2	(1) History files posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the history data files.	March 2016
1207					March 2017
1208					(Renewal 1 - March 2018)
1209					(Renewal 2 - March 2019)
1210					(Renewal 3 - March 2020)
1211	Scoring and Reporting	Spring EOC: Development of the history files for EOC and ELA/Mathematics	The contractor will create and update history files after each test administration using the requirements specified in the SR specifications. ITN Reference 7.5.4.2	(1) History files posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the history data files.	October 2015
1212					October 2016
1213					October 2017
1214					(Renewal 1 - October 2018)
1215					(Renewal 2 - October 2019)
1216					(Renewal 3 - October 2020)
1217	Scoring and Reporting	Summer EOC: Development of the history files for EOC and ELA/Mathematics	The contractor will create and update history files after each test administration using the requirements specified in the SR specifications. ITN Reference 7.5.4.2	(1) History files posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the history data files.	October 2015
1218					October 2016
1219					October 2017
1220					(Renewal 1 - October 2018)
1221					(Renewal 2 - October 2019)
1222					(Renewal 3 - October 2020)
1223	Scoring and Reporting	Fall ELA/L Retake: Development of the APS (Alternate Passing Score) file for Retake	The contractor will create and update an APS file for Retake test after each test administration using the rule specified in the SR specifications. NOTE: This is only if policy decisions mean that an APS file is needed. ITN Reference 7.5.4.2	(1) APS file posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the APS file.	November 2015
1224					November 2016
1225					(Renewal 1 - November 2017)
1226					(Renewal 2 - November 2018)
1227					(Renewal 3 - November 2019)

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1228	Scoring and Reporting	Spring ELA/L Retake: Development of the APS (Alternate Passing Score) file for Retake	The contractor will create and update an APS file for Retake test after each test administration using the rule specified in the SR specifications. NOTE: This is only if policy decisions mean that an APS file is needed. ITN Reference 7.5.4.2	(1) APS file posted to the SFTP. (2) Provide Department email reflecting receipt and approval of the APS file.	May 2016
1229					May 2017
1230					(Renewal 1 - May 2018)
1231					(Renewal 2 - May 2019)
1232					(Renewal 3 - May 2020)
1233	Scoring and Reporting	Fall ELA/L Retake: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	October 2015
1234					October 2016
1235					(Renewal 1 - October 2017)
1236					(Renewal 2 - October 2018)
1237					(Renewal 3 - October 2019)
1238	Scoring and Reporting	Spring ELA/L Retake: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	April 2016
1239					April 2017
1240					(Renewal 1 - April 2018)
1241					(Renewal 2 - April 2019)
1242					(Renewal 3 - April 2020)
1243	Scoring and Reporting	Spring ELA/L and Mathematics: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	April 2015
1244					April 2016
1245					April 2017
1246					(Renewal 1 - April 2018)
1247					(Renewal 2 - April 2019)
1248					(Renewal 3 - April 2020)
1249	Scoring and Reporting	Fall EOC: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	October 2015
1250					October 2016
1251					(Renewal 1 - October 2017)
1252					(Renewal 2 - October 2018)
1253					(Renewal 3 - October 2019)

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1254	Scoring and Reporting	Winter EOC: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	December 2015
1255					December 2016
1256					(Renewal 1 - December 2017)
1257					(Renewal 2 - December 2018)
1258					(Renewal 3 - December 2019)
1259	Scoring and Reporting	Spring EOC: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	April 2015
1260					April 2016
1261					April 2017
1262					(Renewal 1 - April 2018)
1263					(Renewal 2 - April 2019)
1264					(Renewal 3 - April 2020)
1265	Scoring and Reporting	Summer EOC: Manual Rescore Log: Development of the log to record the PBT test with passing scores for manual rescoring.	The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	July 2015
1266					July 2016
1267					July 2017
1268					(Renewal 1 - July 2018)
1269					(Renewal 2 - July 2019)
1270					(Renewal 3 - July 2020)
1271	Scoring and Reporting	Periodic: Writing Image CD/DVD or jump drives and proof to delivery: Development of the Writing Image CD/DVD or jump drives.	The contractor will create and ship Writing images for all students who submitted a folder to be scored and ship these CDs to the districts with one CD/DVD or jump drives for each grade tested. The contractor will submit proof of delivery to the Department after all of the Writing Image CD/DVD or jump drives are delivered to districts. ITN Reference 7.5.5	1) Provide Department email reflecting receipt and approval of the sample CD/DVD or jump drives. (2) Provide proof of delivery spreadsheet listing the following for each shipment: date/time delivered, who received materials, destination address, quantity and type of material delivered. Must show proof of successful delivery to all participating districts.	July 2015
1272					July 2016
1273					July 2017
1274					(Renewal 1 - July 2018)
1275					(Renewal 2 - July 2019)
1276					(Renewal 3 - July 2020)

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1277	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the Test Construction Specifications	The Contractor will deliver Test Construction Specifications for ELA/Literacy and Mathematics, Algebra 1, Algebra 2, Geometry, and Retake Assessments. The final specifications shall be evaluated and approved by the Department. To the extent possible, the Department expects to be involved in any test construction activities for 2015 assessments still to be completed after contract execution. ITN Reference 7.6.0, 7.6.1, and 7.6.2	(1) Test Construction Specifications are secure, and therefore the Contractor shall provide a report which indicates the completed status of Specifications posted to Secure File Transfer Protocol (SFTP). (2) Provide Department email reflecting receipt and approval of the Test Construction Specifications.	May 2014
1278					May 2015
1279					May 2016
1280					(Renewal 1 - May 2017)
1281					(Renewal 2 - May 2018)
1282					(Renewal 3 - May 2019)
1283	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Test Forms for Field Test and/or Operational Administrations	All paper-based and computer-based forms for the tests, as agreed upon by the Department and memorialized in the approved Test Construction Specifications, must be submitted and approved. ITN Reference 7.6.0 and 7.6.1	(1) Test forms are secure, and therefore the contractor shall post them to SFTP. The Department shall maintain a copy of the materials on file as needed for evidence of completion of the deliverable. (2) Provide Department email reflecting receipt and approval of the final paper-based and computer-based forms.	July 2014
1284					July 2015
1285					July 2016
1286					(Renewal 1 - July 2017)
1287					(Renewal 2 - July 2018)
1288					(Renewal 3 - July 2019)
1289	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the Sampling Plans	Detailed plan for sampling of students from the State. Sampling plan must describe the initial analyses on the SSR files, introducing plans for how to collect data, and the list of post-hoc analyses for representativeness checks when data from test administrations are in for operational processing. ITN Reference 7.6.2.2	(1) Final versions of sampling plans posted to SFTP. (2) Provide Department email reflecting receipt and approval of the sampling plans.	July 2014
1290					July 2015
1291					July 2016
1292					(Renewal 1 - July 2017)
1293					(Renewal 2 - July 2018)
1294					(Renewal 3 - July 2019)
1295	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Drawing Samples for Operational and/or Field Test Administrations	Delivering the data files including sampled units from the populations and the respective reports. Sampling report must describe the initial analyses on the SSR files, procedures for how to collect data, evaluate the representativeness of resulting sample and a list of post-hoc analyses for representativeness checks when data from test administrations are in for operational processing. ITN Reference 7.6.0, 7.6.1, and 7.6.2.2	(1) Data files, including sampled units from the populations, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the samples.	August 2014
1296					August 2015
1297					August 2016
1298					(Renewal 1 - August 2017)
1299					(Renewal 2 - August 2018)
1300					(Renewal 3 - August 2019)

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1301	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the SES Specifications	Preparing a detailed plan for conducting all scaling and equating plans and procedures, scoring plans and procedures. The plan should include a comprehensive and detailed timeline for all tasks and events. The plan should also provide a detailed description of the outcomes produced from the operational and/or field test SES activities, including data files and reports. The plan must be vetted by TAC members. ITN Reference 7.6.2.1	(1) SES Specifications (secure) posted to SFTP. (2) Provide Department email reflecting receipt and approval of the SES Specifications.	December 2014
1302					December 2015
1303					December 2016
1304					(Renewal 1 - December 2017)
1305					(Renewal 2 - December 2018)
1306					(Renewal 3 - December 2019)
1307	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing SES Activities	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.0, 7.6.1, and 7.6.2	(1) Submit Final Scaled Item Parameter Estimates and Scored Files (secure files) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the files.	May 2015
1308					May 2016
1309					May 2017
1310					(Renewal 1 - May 2018)
1311					(Renewal 2 - May 2019)
1312					(Renewal 3 -May 2020)
1313	Scaling, Equating, Scoring, and Special Psychometric Studies	Spring ELA/L and Mathematics: Develop Calibration Sampling Specifications	The contractor's sampling specifications must include analyzing the most recent SSR files and establishing a road map for gathering the required data proven to represent the demographic characteristics of the state and student performance. The specifications will also address the steps, procedures, and software required for replication of the sampling procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration. ITN Reference 7.6.2.2	(1) Submit final Calibration Sampling Specifications via SFTP. (2) Provide Department email reflecting receipt and approval of the specifications.	(Dates to be negotiated) 2015
1314					2016
1315					2017
1316					(Renewal 1 - 2018)
1317					(Renewal 2 - 2019)
1318					(Renewal 3 - 2020)

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1319	Scaling, Equating, Scoring, and Special Psychometric Studies	Spring EOC: Develop Calibration Sampling Specifications	The contractor's sampling specifications must include analyzing the most recent SSR files and establishing a road map for gathering the required data proven to represent the demographic characteristics of the state and student performance. The specifications will also address the steps, procedures, and software required for replication of the sampling procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration. ITN Reference 7.6.2.2	(1) Submit final Calibration Sampling Specifications via SFTP. (2) Provide Department email reflecting receipt and approval of the specifications.	(Dates to be negotiated) 2015
1320					2016
1321					2017
1322					(Renewal 1 - 2018)
1323					(Renewal 2 - 2019)
1324					(Renewal 3 - 2020)
1325	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Creating and Finalizing Technical Reports	Preparing Technical Reports, as described in section 7.6.3.2. Note that Table of contents listed in 7.6.3.2 includes the minimum requirements for the report. Collecting Feedback from the Department and Technical Advisory Committee (TAC), finalizing the reports after incorporating the feedback, and submitting the final versions of the reports to the Department. ITN Reference 7.6.3.2	(1) Submit initial versions and the final versions of Technical Reports (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the technical reports.	December 2015
1326					December 2016
1327					December 2017
1328					(Renewal 1 - December 2018)
1329					(Renewal 2 - December 2019)
1330					(Renewal 3 - December 2020)
1331	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Linking Plan: Scale Linking Plan for transitioning from FCAT 2.0 Reading & Mathematics and EOC Algebra 1 & Geometry to the Florida Standards Assessments	Scale Linking Plan for transitioning from FCAT 2.0 Reading & Mathematics and EOC Algebra 1 & Geometry to the Florida Standards Assessments ITN Reference 7.6.3.3	(1) Submit initial versions and the final versions of Scale Linking Plans (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the linking plans.	November 2014
1332					
1333	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Linking Plan: Collecting Legal Opinion	Collecting legal opinion, subject to the Department's approval, about the defensibility of linking methodology. ITN Reference 7.6.3.3	(1) Submit final version of the legal opinion document (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the linking plans.	October 2014
1334					

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1335 1336	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Scales during transitioning years to find out FCAT 2.0 and EOC equivalents based on the performance of students on the Florida Standards Assessments	Conducting all linking operations and scoring activities as laid out in the approved linking specifications. ITN Reference 7.6.3.3	(1) Submit final look-up tables and scored files (secure files) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the files.	May 2015
1337	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Standard Setting Work Plan	Prepare a Standard Setting Work plan for setting achievement level standards for ELA/Literacy, Mathematics, Algebra 1 &2, and Geometry assessments. Plan must include every detail of the methodology, internal and external data files, and the timeline for all of the activities during educator and reactor panel meetings. The Plan must be vetted by TAC members and the methodology must be approved by the department. ITN Reference 7.6.3.4	(1) Submit the final version of Standard Setting Work Plan and relevant materials, such as slides (secure materials), posted to SFTP. (2) Provide Department email reflecting receipt and approval of the documents.	January 2015
1338	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Implement Achievement Level Standard Setting Meetings	Hold the required meetings and collect recommended cut scores from all relevant groups, as described in ITN Reference 7.6.3.4	(1) Submit the initial version of the Standard Setting Technical Report (secure file), including recommended cuts and impact data, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.	October 2015
1339	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Finalizing Standard Setting Technical Report	Preparing Technical Reports, as described in section 7.6.3.4. Collecting Feedback from the Department and Technical Advisory Committee (TAC), finalizing the reports after incorporating the feedback, and submitting the final versions of the reports to the Department. ITN Reference 7.6.3.4	(1) Submit the final version of the Standard Setting Technical Report (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.	November 2015

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1340	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Vertical Scaling Specifications	Preparing a detailed plan for conducting all vertical scaling procedures. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.5 The plan must be vetted by TAC members. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Post the plan for Vertical Scaling (secure file) via SFTP. (2) Provide Department email reflecting receipt and approval of the Vertical Specifications.	November 2014
1341					(Renewal 1 - November 2017)
1342	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Vertical Scaling Activities and Preparing Technical Report	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Submit Final Technical Report and Scored SSR Files (secure files), including vertically aligned scale scores, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2015
1343					(Renewal 2 - August 2018)
1344	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Drift Study Specifications	Preparing a detailed plan for conducting scale drift study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.6 The plan must be vetted by TAC members. ITN Reference 7.6.3.6	(1) Submit the plan for conducting the scale drift study (secure) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the scale drift study specifications.	(Renewal 1 - July 2017)
1345					
1346	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Scale Drift Research and Preparing Technical Report	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.3.6	(1) Submit Final Technical Report and rescaled item parameters (secure files) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	(Renewal 2 - August 2018)
1347					

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1348 1349	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Specifications for Comparability Between Devices Delivering Assessments	Preparing a detailed plan for conducting comparability study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.7 The plan must be vetted by TAC members. The plan should include the degree of comparability of item-level and test-level statistics across devices. The plan should include the degree of comparability of item-level and test-level statistics across various input types. For the questions above, the plan should address to what degree of comparability can be obtained through scaling items onto a single metric, linking or concordance. The plan should also include what interactions exist among device, input type and item/task characteristics, grade, subject, and relevant student characteristics. ITN Reference 7.6.3.6.1	(1) Submit the plan for conducting the comparability study (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2014
1350 1351	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Study for Comparability Between Devices Delivering Assessments, Preparing its Final Report, and Recommendations with TAC Committee	Conducting all of the planned analyses, preparing its technical report, and sharing the findings and recommendations with TAC members. ITN Reference 7.6.3.6.1	(1) Submit Final Report and Recommendations to the Department. These materials are secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2015

	A	B	C	D	E
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1352 1353	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of a study plan for linking Florida Standards Assessments to other assessments measuring the same standards	Preparing a detailed plan for conducting the linking study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.8 The plan must be vetted by TAC members. The plan should include a review of the most promising and most feasible methods in linking, discuss the technical feasibility of such methods, and explain the process of establishing the linking relationship(s) in detail. ITN Reference 7.6.3.6.2	(1) The plan for conducting comparability study is secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2015
1354 1355	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Florida Standards Assessments to other assessments	Conducting all of the planned analyses, preparing a final technical report, and sharing the results of linked relationships with TAC committee to discuss the validity of interpretations. ITN Reference 7.6.3.6.2	(1) Submit Final Report and Recommendations (secure files) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2016
1356 1357	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of a study plan for the linking Florida Standards Assessments to International Assessments	The Contractor's plan will include, review of the most promising and most feasible methods likely to be used in international linking, discuss the technical feasibility of each method given the nature and design of the Florida Standards Assessments and those of international assessments such as PISA and TIMSS, propose method(s) for linking the scales of assessments, propose alternative ways for collecting data, explain the process of establishing the linking relationship(s) in detail, and provide a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.9. The contractor will share the report with the Department and its TAC members. Upon approval from the Department, the contractor will finalize the plan for the linking. ITN Reference 7.6.3.6.3	(1) The plan for conducting the linking study is secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2015

1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**
1358	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Florida Standards Assessments to International Assessments	Conducting all of the planned analyses, preparing a final technical report, and sharing the results of linked relationships with TAC committee to discuss the validity of interpretations. ITN Reference 7.6.3.6.3	(1) Submit Final Report and Recommendations to the Department. These materials are secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2016
1359					
1360	Program Management	Periodic: Production Schedule	The production schedule shows the Department's beginning and ending review dates by test document for each review round. ITN Reference 7.7.2	(1) Appearance of schedule in weekly management report (2) Provide Department email reflecting approval of proposed or revised production schedule.	April 15, 2014
1361					April 15, 2015
1362					April 15, 2016
1363					(Renewal 1 - April 15, 2017)
1364					(Renewal 2 - April 15, 2018)
1365					(Renewal 3 - April 15, 2019)
1366	Program Management	Periodic: Program Management Meetings	The contractor will coordinate regular management meetings between the contractor and Department staff. The number and type of meetings are provided in 7.7.5 of the ITN.	(1) Include support for all meetings since the previous invoice. (2) Provide the meeting costs, a final agenda, and a final list of attendees for each meeting.	2015
1367					2016
1368					2017
1369					(Renewal 1 - 2018)
1370					(Renewal 2 - 2019)
1371					(Renewal 3 - 2020)
1372	Program Management	Periodic: Program Management Staff	The work described in the ITN constitutes a large, complex, challenging program that requires year-round activity and close attention to overlapping tasks for different years and the impact on project resources. The contractor is expected to provide a sufficient number of highly-qualified personnel to work closely with the Department to manage the contract. Specific requirements are in 7.7.2 of the ITN.	(1) Include support for program management staff operational for the invoice period. (2) Provide an organization chart with the appropriate staff indicated for each invoice period. (Quarterly invoices to occur in February, May, August, and November)	2015
1373					2016
1374					2017
1375					(Renewal 1 - 2018)
1376					(Renewal 2 - 2019)

1378	Program Management	Periodic: Program Management Reports: Weekly Management and Action Item Report	The Weekly Management Report and Action Item Report will report the status of recent and upcoming tasks, highlighting those leading up to deliverables and critical tasks, report progress on program issues, identify unresolved issues, and maintain a list of requests requiring change orders or amendments. The weekly report will be provided to the Department by no later than noon one day prior to the weekly program management conference calls and will reflect the previous week's work. ITN Ref 7.7.6	(1) For each invoice period, provide one management report from each month since the previous invoice period. (Quarterly invoices to occur in February, May, August, and November)	2014
1379					2015
1380					2016
1381					(Renewal 1 - 2017)
1382					(Renewal 2 - 2018)
1383					(Renewal 3 - 2019)
1384	Program Management	Periodic: Annual Program Review	Review will include a record of the contractor's services and deliverables in response to contractual/ITN requirements. This review must identify major program accomplishments and successes, as well as areas of the program that require changes and improvement in the upcoming year. The review is intended to be a history of program events and to describe recommended improvements or changes for subsequent years. The annual review will be based on information gathered by the contractor's program and project management staff throughout the year. The review will address all aspects of program service and products including management, technology, interpretive products, communications, development, test production, test administration, materials shipping/pickup, scoring, and reporting processes. It will also follow the annual administrative cycle, beginning with fall and ending with the following summer. ITN Reference 7.7.6	(1) Provide evidence of Department acceptance and approval of the annual program review for the previous administration year.	November 2015
1385					November 2016
1386					November 2017
1387					(Renewal 1 - November 2018)

Addendum # 2

REPLY NO.: ITN 2014-47
Florida Standards Assessments

November 12, 2013

This addendum is issued to provide applicable changes to the above referenced ITN. Changes made to the ITN are coded as: words stricken are deletions; words underlined are additions.

1) Section 3.4 CRITICAL EVENT DATES is hereby revised to read:

3.4 CRITICAL EVENT DATES
These are tentative dates for critical events, and are subject to change.

- October 25, 2013 – ITN Released
- ~~November 8, 2013~~ November 14, 2013 @ 2:00 PM, ET - Deadline for Technical Questions
- ~~November 15, 2013~~ November 18, 2013 - Department Response to Technical Questions received by deadline
- ~~December 12, 2013~~ December 16, 2013 @ 2:00 PM, ET - Technical & Price Replies are due
- ~~December 12, 2013~~ December 16, 2013 @ 2:30 PM - Technical Replies will be opened in Room 332 Turlington Building (Step 1)
- January 10, 2014 - The Department will evaluate the Technical Replies in Room 1706 Turlington Building @ 9:00 AM (Step 2)

Price Replies will be evaluated by the Bureau of Contracts, Grants and Procurement Management Services staff during the evaluation stage.

- January 28, 2014 - The Negotiation Committee will start negotiations on or about (Step 4)
- February 13, 2014 BAFO's due on or about
- February 25, 2014 – ITA Meeting on or about

The Intent to Award will be posted for 72 hours upon completion of the negotiation meeting and a final decision by the Department.

2) Section 4.3 REPLY QUESTIONS & ANSWERS, third paragraph is hereby revised to read:

WRITTEN QUESTIONS should be submitted to:

Bureau of Contracts, Grants and Procurement Management Services, Fran Shewan, 325 West Gaines Street, 332 Turlington Building, Tallahassee, Florida 32399-0400, ~~fshewan@fldoe.org~~ fran.shewan@fldoe.org (email preferred), or via Fax Number: (850) 245-0719. See **SECTION 3.4** Critical Event Dates for question due dates.

Potential proposers have 72 hours from posting of addenda to protest the requirements of each addendum. Failure to file a protest within the time prescribed in Section 120.57(3), or failure to post the bond or other security required by law within the time allowed for filing a bond shall constitute a waiver of proceedings under Chapter 120, Florida Statutes.

YOUR REPLY WILL NOT BE COMPLETE WITHOUT THIS DOCUMENT SIGNED AND INCLUDED!

Addendum # 3

REPLY NO.: ITN 2014-47
Florida Standards Assessments

NOVEMBER 18, 2013

This addendum is issued to provide applicable changes to the above referenced ITN and to provide the Answers to Questions submitted timely by vendors during the Questions and Answer period. Changes made to the ITN are coded as: words stricken are deletions; words underlined are additions.

1. **Section 5.19 Liquidated Damages, a. Tasks/Activities and Interim Deliverables is revised to read:**

   a. Tasks/Activities and Interim Deliverables: For each default on performance and completion of Work Tasks/Activities and Interim Deliverables (see SECTION 7.8), it is agreed that for each and every day work remains uncompleted beyond the time set for its completion the Contractor(s) shall be liable to the Department in a specified amount of ~~three~~ five thousand dollars ($5,000.00) per business day as liquidated damages for such delay, and not as a penalty, from the date of notice by the Department until the default has been corrected.

2. **Section 7.3.2.1, page 30, first paragraph is removed and replaced with the following:**

   Any tests offered on the computer must also be prepared for use in a paper-based format (Braille, large print, regular print, one-item-per-page) as noted in these tables. See Appendix A. In this instance, the paper-based format will only be offered by special request for up to five percent (5%) of the students and can be used at the Department's discretion.

3. **Clarification: Section 7.4.9.3 System Performance Requirements**

   The reference to "simultaneous online users" refers to the number of users who are logged in to the system.

4. **Section 7.6.3.4 Implement Achievement Level Standard Setting Meetings, third paragraph, fourth sentence is revised to read:**

   The Department desires to present proposed cut scores to the State Board of Education in ~~January~~ November following each meeting; therefore the final report of activities of each meeting should be available for the Department no later than ~~November~~ September following each meeting.

5. **Table 7.7.7 has been revised. Line number 2 Item/Passage Community Sensitivity Base Contract dates and the Renewal month has changed. See new revised Table 7.7.7.**

Table 7.7.7.1 provides information about the number, expected length, approximate number of participants, and estimated cost of such meetings.

Revised Table 7.7.7 Meetings of Educators and Other Citizens

6. **Appendix K is hereby added to indicate the budget for reimbursables that will be added during the final contract negotiations.**

7. **Section 7.7.9 Reimbursables has been removed and replaced to read:**

7.7.9 Reimbursable Funding Categories

Six funding categories are designated for specified program functions and may be used only for those functions. Use of these funds requires authorization by the Department contract or program manager or program area leads. Authorization may be provided by specific email or other written communication, or by Department approval of a specific plan for a meeting(s) or activities requiring use of these funds. Amounts are designated for administration tasks. Respondents should not include these amounts in their cost replies.

~~Monies not expended from these funds will be deducted from final contract payment at the conclusion of the contract during contract resolution.~~ The reimbursable fund balances will be reported by the contractor quarterly with each invoice submission in the Accounting Report. The amounts specified in this section may be increased or decreased by an appropriately negotiated amendment at any time during the lifetime of the contract. The Accounting Report will indicate expenditures from, and the balances remaining, in these funds. The final contract invoice will be accompanied by the final balance sheet for these funds. The amounts allocated for these funds should not be identified ~~separately~~ in the Respondents' cost reply.

7.7.9.1 Consultant Services

The contractor will provide to the Department technical advice and consultant service, as required, from outside the contractor's staff. The contractor will recommend and the Department will select the consultant(s) to be used, who may or may not have been recommended by the contractor. A contract between the consultant and the contractor will be required and will include the amount allocated for honorarium, travel, lodging, and per diem as authorized by the Department. Reimbursement for travel will be at rates authorized by Section 112.061, F. S., for travel and per diem. The Respondent should be aware that ~~include in the reply~~ the amount of $84,375.00 as a fixed amount for the base contract period and $28,125.00 as a fixed amount for each year of the optional renewal period will be available for reimbursable expenses. These expenses, however, should not be included in the Respondent's price reply.

7.7.9.2 Contingency Services

It is possible that unforeseen circumstances will make it either necessary or desirable to perform tasks not specifically anticipated at this time, for example, data analyses beyond those described herein, unexpected data processing, acquisition of additional materials, or programming for test functionality not yet envisioned. These circumstances cannot be defined in advance, and the Department must be able to request such extra services in a timely fashion so as not to impede implementation of the assessments. ~~In the reply, the~~ The Respondent should be aware that ~~include~~ $84,375.00 as a fixed amount for the full term of the base contract period and ~~will include~~ $28,125.00 as a fixed amount for each year of the optional renewal period will be available for reimbursable expenses. These expenses, however, should not be included in the Respondent's price reply.

7.7.9.3 Author's Alterations and Design Control

The Department reserves the right to make changes in materials at any stage of the program prior to final production or delivery. Any changes to the Department approved, production-ready product (e.g., digital proofs or final computer-based test files) that are required due to contractor error will be paid for by the contractor. Otherwise, changes made to the Department approved, production-ready product will be paid for as author's alterations. If any alterations are necessary, the Department will identify in writing to the contractor the alterations to be made. ~~In the reply, the~~ The Respondent should be aware that ~~include~~ $84,375.00 as a fixed amount for the full term of the base contract period and ~~will include~~ $28,125.00 as a fixed amount for each year of the optional renewal period will be available for reimbursable expenses. These expenses, however, should not be included in the Respondent's price reply.

7.7.9.4 Provision for Meetings with Florida Educators

The Respondent will include a fixed amount to cover the costs of travel and per diem for Florida educators, Florida citizens, and others participating in the meetings identified in Section 7.7.7. The contractor will be responsible for the travel reimbursement for participants at rates authorized by Section 112.061, F. S., for travel and per diem. ~~In the reply, the~~ The Respondent should be aware that ~~include~~ $5,491,496.00 as a fixed amount for these meetings with Florida educators during the base contract period and $1,830,498.00 for each year of the optional renewal period will be available for reimbursable expenses. These expenses, however, should not be included in the Respondent's price reply.

7.7.9.5 Provision for Meetings with Department Staff

A fixed amount will be included ~~in the reply~~ to cover the costs of travel and per diem for the Department of Education staff or others participating in meetings with the contractor on behalf of the Department. Reimbursement for staff will be at rates authorized by Section 112.061, F.S. These funds will not be used to fund travel and per diem of the contractor's staff. These funds will be expended only with the approval of the Department. ~~In the reply, the~~ The Respondent should be aware that ~~include~~ $438,750.00 as a fixed amount for ten (10) staff members to attend as many as fifteen (15) meetings per year requiring four (4) travel days each during the contract during the base contract period and $146,250.00 for each year of the optional renewal period will be available for reimbursable expenses. These expenses, however, should not be included in the Respondent's price reply.

7.7.9.6 Contractor Staff Positions

To improve work flow, work quality, and communications, the contractor will fund salary and benefits for five (5) professional positions to work under the direction of the Bureau of K-12 Assessment within the Florida Department of Education. These positions will be three editors and two Systems Project Consultants. The Department will work closely with the contractor to interview and select individuals who are acceptable to both parties. The contractor will employ its standard recruiting, screening, and hiring procedures to secure individuals to fill these positions. The employees will be full-time employees of the contractor. The employees will receive benefits typically provided to the

contractor's employee classification system. The employees will be paid at a rate comparable to similarly skilled and experienced Department employees using the contractor's employee classification system.

The basic duties of the Computer-Based Test Editor (1) and the Materials Editors (2) include: (a) write and edit materials for content, such as items, tests, reports, training materials, brochures, scripts, or on-screen presentations; (b) develop, analyze, and select appropriate information and present it in a form and at a level suitable for the intended audience; (c) review written products and materials for conformity with standards of objectivity, style, and presentation; and, (d) perform a variety of editorial duties related to editorial production. Candidates must possess one (1) year of specialized experience directly related to these duties. Candidates may substitute two (2) full academic years of related graduate level education in lieu of the work experience requirement.

The basic duties of the Systems Project Consultants (2) include: (a) participating in weekly meetings and communicating issues between the FDOE and the contractor's program managers, (b) making suggestions for improvement to the contractor's procedures to aid FDOE staff in data verification activities, (c) assisting FDOE staff debugging SAS computer programs and analyzing data files, (d) traveling, at the contractor's expense, with FDOE staff to check scanning at the contractor's site, (e) assisting in the verification of reports of results using SAS computer programs, (f) assisting in the verification of posting of files and reports on the portal, and (g) communicating issues with District Coordinators of Assessment related to scoring and reporting activities and issues. Candidates must have a thorough understanding of large scale standardized testing programs and data verification techniques. The candidate must also have experience managing data activities such as those required for this project, verifying data files, and using SAS, Excel, and other Microsoft Office products.

The Respondent should be aware that ~~include in the response~~ $1,800,000.00 as a total amount during the base contract period and $600,000.00 for each year of the optional renewal period will be available for reimbursable expenses. These expenses, however, should not be included in the Respondent's price reply.

8. **Attachment 1a Deliverables Pricing Sheet Instructions and Attachment 1b Deliverables Pricing Sheet are hereby added.**

   To obtain a copy of Attachment 1b Deliverables Pricing Sheet in Microsoft Excel format, send an email request to: Fran Shewan, 325 West Gaines Street, 332 Turlington Building, Tallahassee, Florida 32399-0400, fran.shewan@fldoe.org (email preferred), or via Fax Number: (850) 245-0719.

Questions and Answers

Please be advised all questions are ***keyed as submitted.***

ITN 2014-47 Questions and Answers

Question #	Vendor Name	Vendor Question #	Vendor Question/Comments	Answer
1	Data Recognition Corporation	1	Can the Department provide more information on the requirements for "performance tasks?" Are examples of Performance Tasks available to review?	The Department has no strict expectations nor requirements regarding performance tasks beyond what is described in Sections 7.3.0 and 7.3.1. The overall assessment should meet the key criteria outlined in Sections 3.1 and 7.2.0.
2		2	Are there any requirements to release operational items or operationally-representative items during the contract (once or an annual basis)?	There is an expectation to release operational or operationally-representative items for certain interpretive products (see 7.3.7.5) and for the individual student reports for grades/subjects containing performance tasks (see 7.5.5). These releases may be limited to one item per grade and subject.
3		3	Is there a bank of items that need to be reviewed and realigned to the Florida Standards? If so, approximately how many items would need to be reviewed for possible use?	At this time, there are no plans to review and realign items in Florida's Item Bank to the Florida Standards.
4		4	It is understood that an English-to-Heritage Language Translation Dictionary is requested for online assessments. Is there an expectation to translate any of the paper/pencil deliveries of the forms to Spanish and Haitian Creole?	No.
5		5	How has district route code information been previously provided to contractors? Is this information provided by districts in electronic or paper format?	Districts submit route codes electronically via an Excel spreadsheet.
6		6	Please define the types of materials that would be considered "miscellaneous materials." Are these additional or supplemental testing materials? Can the Department provide an estimate of the number of such shipments and the quantities of districts involved?	Miscellaneous materials in this case would apply to non-scheduled materials deliveries. For instance, additional orders require supplemental shipments, as needed, and it is difficult to anticipate how many orders will be placed for each administration. In addition, the department may request samples of materials or used secure materials that are not included in scheduled reviews or shipments.
7		7	Please clarify the difference between the Item/Passage Bias Meeting and the Item/Passage Community Sensitivity Meeting? Will a meeting be conducted with Florida educators and the latter conducted with other citizens? Are both review committees reviewing potential concerns for bias and sensitivity issues?	The Community Sensitivity Committee is composed of Florida citizens and reviews all passages, prompts, and items for issues of potential concern to the members of the community at large. Reviewers are asked to consider whether the subject matter and language of each passage, prompt, and item is acceptable to Florida students, their parents, and other members of Florida communities. The Bias Review Committee is composed of Florida educators representative of Florida's demographic make-up. Reviewers look for gender, racial/ethnic, linguistic, religious, geographic, and socioeconomic bias in passages, prompts, and items. Comments made by each of these committees are collected, reviewed, and acted upon by Content Item Review Committees. Item Review Committees are composed of Florida educators who are content experts.
8		8	Please confirm that Attachment 5 is a form that is used in management of the awarded contract and does not need to be submitted with the proposal.	The Respondent may submit Attachment 5 with their reply; however, it is a requirement for the Contractor to submit this form with each invoice submitted for payment, whether or not funds have been spent with a small, minority-, women-, and service-disabled veteran business enterprise subcontractor for the period covered by the invoice.

9	CTB/ McGraw Hill	1	It is unlikely that the number of copies requested (20 with original and copies), for both the technical proposal and the price proposal could be packaged in one box each weighing less in 25 pounds. Are multiple, clearly labeled, boxes acceptable?	Yes.
10		2	How should bidders reply to requirement 7.7.9? If bidders include requirement 7.7.9 and our response in the technical proposal, will proposals be deemed non responsive?	The price reply should not include Reimbursable Funding Categories (7.7.9). See Addendum 3 and Appendix K.
11		3	Does Florida have items that are aligned Common Core that are available in for 3 – 8 English 9, 10, 11 and the End of Course Mathematics?	No.
12		4	For grades 3 – 8, ELA and Math, how many operational forms are required?	The Department will consider any number of operational forms, however, currently for Grades 3-8 in ELA/L and Mathematics, the Department uses one unique operational form for each grade and subject spiraled in such a way as to yield up to forty field test and anchor forms. Only one of these forms is used for all accommodated forms, however.
13		5	In order to meet the two week turnaround for EOC reporting, it appears that pre-equating will be required. Thus, a field test will need to be conducted to establish reliable item parameters. The EOC items should be field tested on FL students who recently completed the associated courses to obtain valid and reliable item parameters. To have the assessments pre-equated for a spring 2015 administration, these items will have to be field tested either in spring 2014 (preferred) or fall 2014. Will students be enrolled in courses in spring or fall 2014 that are similar enough to those expected to be offered in spring 2015 that we can expect fall or spring 2014 field test parameters to be validly applied to the operational assessments? If not, will DOE consider post-equating and possibly extending the time between assessment and reporting?	As indicated in the scope of work, equivalency of the multiple forms of each EOC assessment administered in spring is verified through concurrent calibration, plus post-equating via common items between the item bank and the new test forms. Thus, EOC assessments administered in the spring must be post-equated, and the selected contractor must come up with a plan that will allow implementation of these psychometric operations in a short timeframe.
14		6	Please confirm that the cost of this independent contractor should NOT be included in this bid.	This is to confirm that the Department's independent contractor in 7.5.6 is handled under a separate procurement and is not the responsibility of the selected contractor.
15		7	In Section 7.5.6.5, you indicate that the contractor must identify student in each grade who failed by 5 or fewer Scale Score points or 15 Developmental Scale Score points for Manual Rescoring. Can you clarify the difference in the criteria 5 or fewer Scale Score points and 15 Developmental Scale Score points?	For the tests required for graduation, the contractor must identify students in each grade who failed by 0.1 or fewer points in standard deviation units for Manual Rescoring.

16		8	Typically, legal defensibility is established by documenting the following of industry standard procedures, including the presentation of the linking method to an appropriately credentialed technical advisory committee for review, and approval (sometimes with modifications based on TAC recommendations). Please confirm that an external technical advisory committee review meets the intent of this requirement.	The external technical advisory committee does not meet the intent of this requirement. A third-party consultant, who has expertise in both measurement and law, must review the linking procedure.
17		9	It seems that the RFP indicates standard setting will occur in educator meetings summer 2015 with proposed cut scores presented to the State Board of Education in January 2016. Is it correct to assume that the first year's score reports will not include performance level information?	As a correction, the Department desires to present proposed cut scores to the State Board of Education in November following the standard-setting meetings; therefore the final report of activities of each meeting should be available for the Department no later than September following each meeting. See Addendum 3. It is correct to assume that 2014-15 score reports will not include performance level information. Scores may be reported in thirds and/or on some type of scale to be determined after contract execution. Proposals may address these or other possible approaches.
18		10	What percentage of students will be Online during each "Transition to CBT" grade/administration?	Each administration that a grade/subject test is scheduled to be computer-based, the expectation is that all participating students are testing online with the exception of a small number of students who require paper-based accommodations (e.g., regular print, large print, braille, one-item-per-page).
19		11	By "full-time" do you mean these Scoring Directors are full-time time employees of the vendor, not full-time to the FSA program?	Scoring directors are full-time employees of the contractor and, during operational handscoring, should be 100% dedicated to the FSA program.
20		12	Can the Scoring Director for 3-8 Math also serve as the Scoring Director for EOC Geometry and Algebra I & II, or do you require one for each section?	A single Mathematics scoring director is sufficient.
21		13	If Bidders are only responding to one or more but not all four components (A-D) what should be the amount of reimbursable funds they should include in the Price Reply? It seems the prices provided in the ITN are to cover all four components.	See #10.
22		14	Please confirm that in the Price Reply line/row E is simply the total of the prices in rows A-D. Or, if vendors are submitting bids for the entire scope (A-D), do they simply complete line E?	The Respondent will submit a separate price for each component (A-D) they choose to bid on and additional pricing (E) showing combined cost with the anticipated cost savings if the Respondent is awarded all components.
23		15	Should bidders add rows to the Price Reply document to provide for the Required Reimbursable Funds?	See #10 and #22.
24		16	Please confirm that in the Price Reply line/row E is simply the total of the prices in rows A-D. Or, if vendors are submitting bids for the entire scope (A-D), do they simply complete line E?	See #22.

25		17	What dates should bidder's use for the first year of the contract? Will the first contract 'year' be he award date through June 30, 2014? Or, would it cover more than 12 months and run from the award date through June 30, 2015? Or, would no contract be in place prior to June 30, 2014?	The contract dates will be negotiated and determined prior to contract execution. The Department anticipates contract execution will be prior to June 2014. The original term of the contract will commence upon signing from both parties and be effective for a period of thirty-six (36) months. The contract will overlap the State of Florida's fiscal year which comprises July 1 through June 30.
26	Pearson	1	The ITN states that a performance bond in the amount of 10% of the total annual award is required. On page 153, Attachment 7, Contract Standard Terms and Conditions, Section XVII, it states that a performance bond in the total amount of the contract is required. Please confirm that Section 5.15 governs this ITN and that a performance bond in an amount equal to 10% of the total contract value will be required.	Section 5.15 PERFORMANCE BOND supercedes the Standard Contract Term and Condition regarding bond amount.
27		2	Section 7.3.4.3 makes no mention of a specific subject matter and yet it is cross-referenced in the Meetings table in Section 7.7.7 to a meeting that mentions only Mathematics and only has nine participants over two days. Please clarify the subjects and grades/courses exams for which the data will be reviewed in the Data Review meeting and whether the total number of participants (9) is accurate.	The Data Review Committees meet to adjudicate Mathematics fill-in response items (such as inserting a numeric answer) to ensure items behave as expected, include all correct and appropriate answers, and are fair for all students. Nine participants over a two-day period should be sufficient.
28		3	For costing purposes, does the Department expect the base bid to include scoring of performance tasks and constructed responses in the calibration samples used for equating?	Yes.
29		4	The RFP states, "For these papers that are read a second time, if the two (2) readers' scores do not match, a formal resolution process will be established in order to obtain exact or adjacent scores for quality control purposes only." Please clarify this requirement – does the Department require a resolution process only when the two (2) readers' scores are non-adjacent?	Non-adjacent scores, discrepant condition codes, or a paper that was scored by one reader and given a condition code by another reader would require a resolution process.
30		5	As a cost savings measure, may the contractor propose a lower n-count for handscoring of field test constructed responses and performance tasks?	If the contractor provides evidence to the Department indicating the sample drawn from the respective population is sufficiently large and representative and will allow valid and reliable parameter estimates, and the contractor receives approval from the Department, the contractor may propose a lower n-count for handscoring of field test constructed responses and performance tasks.
31		6	If the contractor is applying for all four components, is it acceptable to propose a total of four full-time project managers?	The proposal should meet the minimum requirements for staffing as described in the ITN. Staffing beyond that is at the respondent's discretion, but sufficient staff should be proposed in order to manage the project.

32		7	Item/Passage bias and sensitivity reviews are listed in the table as meetings occurring at separate times during the year. Would the department consider holding bias and sensitivity at the same time?	The ITN has been corrected to reflect that both meetings will be held at the same time. See Addendum 3.
33		8	Does the department have any preference in how the pricing by deliverable is formatted?	See Addendum 3. Detailed instructions are provided in Attachment 1a.
34		9	Could the department provide some clarification around the evaluation process in regards to comparing respondents who bid on different components? For example, if a respondent wants to bid on all components can they just provide a price for Component E or do they also have to provide prices for A-D separately? Also, if the highest scoring respondent bid only on Component A, and all other respondents only bid on Component E, what would happen?	Scoring will be conducted in accordance with Section 8.1 Criteria for Evaluation. Each price component will be evaluated and points awarded (A - E respectively). Respondents submitting pricing on component E only will not be evaluated and scored against other components (A - D).
35		10	So that all bidders may respond appropriately, will the Florida Department of Education identify its requirement with regard to unique sequence numbers on multi-page response documents (e.g., litho codes)?	The Department requires the use of lithocodes on multi-page response documents. Each answer document has a unique lithocode. The lithocode is a machine-readable code and eye-readable number printed on each page in the document. The front half of the answer document has the lithocode on the even numbered pages and the back half of the document has it on the odd numbered pages. If a stack of documents is dropped after the spine has been spliced off, the lithocode number may be used to restack the document ensuring that each student's pages are placed under the correct cover page. During the scanning process, the lithocode on the first page is compared to the other lithocodes on the pages of that student's document. If any lithocode differs from the lithocode on the first page, or is missing, the value is flagged for the editor to review and correct.
36	Osceola County School Board	1	A. Please explain how a not for profit entity can be a respondent to this if they subcontract with a University College of Education to develop the test(s), and also subcontract with a data infrastructure vendor such as IBM for data security & data transfer functions?	All replies should be from independent contractors and not individuals or entities that would anticipate being a subcontractor of an independent contractor. Not for profit entities may submit responses that include other entities as subcontractors by clearly identifying who the subcontractors are and what work they will be responsible for. The successful respondent is ultimately responsible for all work on the contract.
37		2	B. Are the tests developed under BID ITN 2014-47 to be used for the current 2013-2014 school year, or for the 2014-2015 school years going forward for the next five years?	The tests developed are for 2014-15 and beyond, for up to six total years.

38	American Institutes for Research	1	a. Q: How will the Department evaluate bids for individual Components versus bids for all Components? b. Q: Is the evaluation of any Component linked to any other Component? For example, is the evaluation of a bid for Component A completely separate from the evaluation of other Components? c. Q: If the evaluation of any Component is linked to any other Component, how will the evaluation points be assigned?	See #22.
39		2	What is covered by the perpetual licenses covering periods after the term of the contract? Test items?	While proposals including perpetual licenses will be considered, the terms of those licenses will be governed by the license itself as detailed by the provider. The terms will be subject to negotiations.
40		3	Due to efficiencies, we will be able to offer lower prices if awarded multiple components. How should Vendors present prices in Attachment 1 (and by deliverable in 7.8) for these efficiencies if awarded multiple Components?	The current pricing structure is designed to reflect a discount when all components are bid together (see Component E pricing). If discounts are available for multiples other than a bid on all components, those contingencies may be explored during negotiations and in Best and Final Offers.
41		4	a. Q: Are reports 2 or 4 pages? Or perhaps 2 pages per subject? b. Q: Does the Department require full-color printing, or is black ink on pre-printed color forms acceptable?	While the number of pages may vary from our current model, the student report should include the same information currently provided in our reports. The Department will accept responses that include black ink on pre-printed color forms, and the pre-printed color forms may include up to 8 colors plus black as indicated in the ITN.
42		5	Section 3.0 indicates the initial term (Contracts Years 1, 2, and 3) shall only be 36 months. Given the award is anticipated February 2014 and the Original Contract Term includes the 2016-17 administrations, this would be longer than 36 months. In completing the schedule and Pricing forms, shall contractors use the following periods for the Original Contract Term? a. Year 1 February 2014 Award – June 30, 2015 b. Year 2 July 1, 2015 - June 30, 2016 c. Year 3 July 1, 2016 – June 30, 2017	See #25.
43		6	This section is very clear with regard to notices of breach, termination, and suspension. However, vendors may interpret this sections' reporting requirement for complaints, investigations, warning letters, or disciplinary actions differently. a. Q: For these items, would the Department accept a common definition of instances that "required a Vendor to pay penalties, fines, or liquidated damages?" b. Q: Are Vendors required to report the amount of any penalties, fines, and liquidated damages? c. Q: Where in the Technical Reply should the Vendor include the required documentation for Poor Performance?	a. Respondent should not limit reporting as suggested here but include any information that falls within the parameters of the listed actions or similar actions. b. Yes, as this information would be considered relevant. c. The Department recommends this information be included in the Qualifications and Experience section of the Technical Reply.

44	Computerized Assessments and Learning	1	In lieu of a bid covering all elements of the ITN, please indicate whether a bidder may submit a partial bid to provide Online Management and Computer-Based Test Administration Systems, in the form of a perpetual and non-exclusive Open license for the use, reproduction and modification of the solution for use in Florida, to support all four assessment components (as summarized in Section 7.1.0), including the requirements of Sections 7.4.8 and 7.4.9, and the full integration of the assessment content to support the requirements of Section 7.4.5, without bidding to create the underlying assessment content, if the bidder agrees to work in conjunction with the selected assessment content provider.	The Department will only consider replies that include all aspects of components bid. Respondents may, however, include subcontractors for portions of the work.
45		2	If the answer to Question 1 above is affirmative, how should cost be provided in the Price Reply (Attachment 1) for the Online Management and Computer-Based Test Administration Systems, including initial onboarding and services to operate and maintain the systems for the duration of the contract?	NA.
46	Strategic Planning Online	1	How do I go about bidding for this job?	Detailed instructions are included in the ITN available through the Florida Vendor Bid System. http://www.myflorida.com/apps/vbs/vbs_www.ad.view_ad?advertisement_key_num=109751
47		2	Can you provide more detail about what your department is looking for?	No.
48		3	How many users will be using this software?	The System Performance Requirements, including the anticipated number of simultaneous users, are provided in 7.4.9.3 of the ITN.
49		4	What software's are you using today to facilitate this process?	The current summative assessment contractor uses TestNav 6.9 to implement computer-based testing.
50	Measurement Incorporated	1	Appendix J, Page 130, Section J4 Will Department approval be required for the handscoring targeted calibration sets?	Yes.
51		2	Appendix J, Page 142, Section J9 Can the State provide established reader Qualification thresholds?	Section 7.5.4.5.5 describes the development of handscoring specifications prior to the beginning of handscoring activities. The Department will conduct discussions with the successful bidder regarding reader qualification metrics, and these metrics will be included in the handscoring specifications.
52		3	Appendix J, Page 143, Section J9 RFP, Page 66, Section 7.5.4.5.3 Handscoring Can the State provide desired reader performance thresholds for IRR, validity items, and calibration sets?	Section 7.5.4.5.5 describes the development of handscoring specifications prior to the beginning of handscoring activities. The Department will conduct discussions with the successful bidder regarding expected reader performance metrics (IRR, Validity, etc.), and these metrics will be included in the handscoring specifications.
53		4	Appendix B, Page 103, Critical and Extremely Critical Activities Can you please confirm that EOC administrations will not require any handscoring activities?	All grade/course assessments with constructed response items will require handscoring activities.

54	Rally! Education	1	Am I reading correctly that the only document due at this time, prior to Dec 12, is the one page form in section 1 of the BID NUMBER: ITN 2014-47?	The Invitation to Negotiate Registration, Intent to Submit Form located on page 5 of the ITN may be submitted anytime. The Form PUR 1001 referenced in Section 1 is an instructional document and need not be returned with the Respondent's Reply.
55	American Institutes for Research	1	1. Is it possible for districts to update the FL DOE data system at any point in time?	This question is not related to ITN 2014-47.
56			2. Is it possible for the state to extract either all of the data in the system or data updates to the system nightly?	This question is not related to ITN 2014-47.
57		2	1. What is the date the rostering system will be online?	This question is not related to ITN 2014-47.
58			2. Will it be possible for districts to update the FL DOE rostering system at any point in time?	This question is not related to ITN 2014-47.
59			3. Will it be possible for the state to extract either all of the data in the rostering system or data updates to the rostering system nightly?	This question is not related to ITN 2014-47.
60		3	1. Is FCAT explorer a state-owned and operated system, or do you expect similar capabilities from the assessment contractor?	This question is not related to ITN 2014-47.
61			2. Will the new contractor be required to provide any content for FCAT Explorer? If yes, what content will the new contractor be required to provide?	This question is not related to ITN 2014-47.
62		4	1. Would Florida please share any results, summaries, or reports available regarding Florida collected with or reported from the PARCC/Smarter Balanced Technology Readiness Tool (www.techreadiness.net)?	Florida did not participate in the Readiness Tool activities.
63	ACT	1	1. With regard to Section 5.19 Liquidated Damages, item “a.” there is a discrepancy regarding the statement, “…Contractor(s) shall be liable to the Department in a specified amount of three thousand dollars ($5,000) per business day as liquidated damages.” Please clarify if the amount is $3,000 or $5,000?	The correct amount is $5,000. See Addendum 3.

Potential proposers have 72 hours from posting of addenda to protest the requirements of each addendum. Failure to file a protest within the time prescribed in Section 120.57(3), or failure to post the bond or other security required by law within the time allowed for filing a bond shall constitute a waiver of proceedings under Chapter 120, Florida Statutes.

YOUR REPLY WILL NOT BE COMPLETE WITHOUT THIS DOCUMENT SIGNED AND INCLUDED!

Attachment 1a

ITN 2014-47
FLORIDA STANDARDS ASSESSMENTS
DELIVERABLES PRICING SHEET INSTRUCTIONS

The Respondent should complete the Deliverables Pricing Sheet (column F of Attachment 1b) for each component they are responding to and submit all pricing sheets as part of the Price Reply. See 3.1 and Attachment 1 for the components, including that Component E includes Components A, B, C, and D and may show anticipated cost savings if the Respondent is awarded all components. The Deliverables Pricing Sheet will be used for negotiation purposes and any resulting contract.

1. In Attachment 1b, do not modify the content in columns A – E.
2. Complete the "Specify Component" field in the heading of the Deliverables Pricing Sheet. Remember that this should be completed for each assessment component included in the reply.
3. Complete column F for each applicable deliverable. Column B indicates whether the deliverable is Periodic (e.g., Program Management Reports, Conduct Onsite Test Construction) or Administration-Specific (e.g., Fall EOC, Spring ELA/L and Mathematics).
    a. Prices for Periodic deliverables should be provided for all components, except where the content of the component is not applicable (e.g., delivering Writing Image CDs would not be applicable for Component B: Mathematics in Grades 3-8).
    b. Prices for Administration-Specific deliverables should be completed for only the deliverables related to that component (e.g., Summer EOC deliverables would not be applicable for Component A: ELA/L in Grades 3-8).
4. The total of the Deliverable Prices in column F of the Deliverables Pricing Sheet should match the Grand Total (Original Term + All Renewals) in Attachment 1 for that component.

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
3	Test Development	Periodic: Production Specifications Document	This secure document includes the specific processes, procedures, and design guidelines for all print, computer-based, and accommodated tests, ancillaries, and interpretive products. ITN Reference 7.3.10	(1) Provide Department email reflecting approval of the final production specifications document. (2) The final production specifications file provided via SFTP.	June 1, 2014	
4					June 1, 2015	
5					June 1, 2016	
6					(Renewal 1 - June 1, 2017)	
7					(Renewal 2 - June 1, 2018)	
8					(Renewal 3 - June 1, 2019)	
9	Test Development	Fall ELA/L Retake: Handscoring Specifications	The contractor should incorporate the handscoring requirements into written handscoring specifications prior to scoring. The handscoring specifications will be a detailed guide to conducting handscoring that will be used by the contractor's handscoring managers and the Department. The applicable administrations/assessments will be determined in the final negotiations. ITN Reference 7.5.4.5	(1) Provide Department email reflecting approval of the final handscoring specifications. (2) The final handscoring specifications provided via SFTP.	Dates to be negotiated

53					June 1, 2016	
54					(Renewal 1 - June 1, 2017)	
55					(Renewal 2 - June 1, 2018)	
56					(Renewal 3 - June 1, 2019)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
57	Test Development	Periodic: Interpretive Products: Test Item Specifications Documents	Test item specifications will be produced for all grades/subjects and may be grouped together in one booklet by grade band or content area. They are based on the standards and define both the content and the format of the test items. Their primary purpose is to establish guidelines for test item writers and reviewers. ITN Reference 7.3.7.5	(1) Provide Department email reflecting approval of each test item specification document. (2) Final PDF files provided via SFTP.	November 1, 2015	
58	Test Development	Periodic: ELA/L and Mathematics Sample Scoring Guides	The contractor will be expected to post electronic publications that provide information to help educators understand the scoring of constructed-response items included on student reports. These publications provide information about the test design, standards and benchmarks, item types, and how items are scored. They also provide scoring rubrics and the annotated papers used to train scorers for the constructed-response items. Each sample item from the scoring papers is displayed as it appeared on the test and responses for each score point, images of student responses, and annotations explaining why the response received a particular score are provided. ITN Reference 7.3.10	(1) Provide Department email reflecting approval of each scoring guide. (2) Final PDF files provided via SFTP.	(Dates TBD - These should coincide with the approved report release dates, which are part of contract negotiations.) 2015	
59					2016	
60					2017	
61					(Renewal 1 - 2018)	
62					(Renewal 2 - 2019)	
63					(Renewal 3 - 2020)	
64	Test Development	Periodic: Understanding Florida's Assessment Reports	This publication describes the various reports of test results distributed to students, schools, and districts. An explanation and an image of each type of report are provided. The booklet also includes information about the test content areas and a glossary of technical terms. The contractor will deliver the electronic ADA-compliant PDF for posting to the DOE website so files can be posted to coincide with the first results delivery (RD1). ITN Reference 7.3.7.5	(1) Provide Department email reflecting approval of Understanding Florida's Assessment Reports. (2) Final PDF files provided via SFTP.	(Dates TBD - These should coincide with the approved report release dates, which are part of contract negotiations.) 2015	
65					2016	
66					2017	
67					(Renewal 1 - 2018)	
68					(Renewal 2 - 2019)	
69					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
70	Test Development	Periodic: Test Design and Blueprint	The Test Design and Blueprint will clearly delineate the number of items, types and placement of items, time allotted for each test session, and location of field-test items for all grades and subjects. ITN Reference 7.3.1 and 7.3.2.1	(1) Provide Department email reflecting approval of Test Design and Blueprint (2) Appearance of completed schedule in weekly management report	June 1, 2015	
71	Test Development	Periodic: Content Item Review "Cleans"	After Content Item Review, the contractor, in conjunction with the Department, will conduct an editorial and content review of the items to ensure that changes have been applied correctly and that all editorial and content issues are corrected. ITN Reference 7.3.4.2	(1) Provide Department email reflecting completion of the “Cleans” process (2) Appearance of completed schedule in weekly management report	February 1, 2016	
72					February 1, 2017	
73					(Renewal 1 - February 1, 2018)	
74					(Renewal 2 - February 1, 2019)	
75					(Renewal 3 - February 1, 2020)	
76	Test Development	Periodic: Field Test Item Sets and Forms Review	Whether an embedded or stand-alone model is used, the contractor, in conjunction with the Department, will construct field-test forms. ITN Reference 7.3.5 and 7.3.6	(1) Provide Department email reflecting completion of the field test forms process (2) Appearance of completed schedule in weekly management report	May 1, 2015	
77					May 1, 2016	
78					(Renewal 1 - May 1, 2017)	
79					(Renewal 2 - May 1, 2018)	
80					(Renewal 3 - May 1, 2019)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
81	Test Development	Periodic: Onsite Test Construction	The contractor will host content experts and leadership from the Department for the express purpose of constructing assessments for all grades/courses and subjects. To the extent possible, the Department expects to be involved in any test construction activities for 2015 assessments still to be completed after contract execution (in July 2014). ITN Reference 7.3.7	1) Provide Department email reflecting completion of the test construction process (2) Appearance of completed schedule in weekly management report	July 15, 2014	
82					July 15, 2015	
83					July 15, 2016	
84					(Renewal 1 - July 15, 2017)	
85					(Renewal 2 - July 15, 2018)	
86					(Renewal 3 - July 15, 2019)	
87	Test Development	Periodic: Item Development Plan	To ensure the quality and number of items/passages developed is sufficient to create future operational test forms, the contractor will submit an item development plan delineating the number and types of items to be developed. ITN Reference 7.3.0	1) Provide Department email reflecting completion of the Item Development Plan. (2) Appearance of completed schedule in weekly management report.	December 1, 2015	
88					December 1, 2016	
89					(Renewal 1 - December 1, 2017)	
90					(Renewal 2 - December 1, 2018)	
91	Test Development	Periodic: Item Writer Training	The contractor must identify and recruit a sufficient number of highly-qualified writers for passages and items to ensure variety and quality of development. The contractor, in conjunction with the Department, will conduct an annual training session for all Item Writers. ITN Reference 7.3.3	1) Provide Department email reflecting completion of Item Writer Training. (2) Appearance of completed schedule in weekly management report.	December 1, 2015	
92					December 1, 2016	
93					(Renewal 1 - December 1, 2017)	
94					(Renewal 2 - December 1, 2018)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
95	Test Development	Periodic: Meetings with Educators	The contractor is responsible for organizing and convening meetings for the purpose of reviewing assessment items and otherwise supporting the assessment program. These meetings are referenced in the ITN in 7.3.4 and 7.7.7. This deliverable includes the cost of preparing for and administering the meeting, but it does not include the cost of travel for meeting participants, which is covered as a reimbursable category in 7.7.9.	(1) Include support for all meetings since the previous invoice. (2) Provide the meeting costs, a final agenda, and a final list of attendees for each meeting.	(Dates to be negotiated.) 2015	
96					2016	
97					2017	
98					(Renewal 1 - 2018)	
99					(Renewal 2 - 2019)	
100					(Renewal 3 - 2020)	
101	Test Development	Periodic: English-to-Language Translation Dictionary	The respondent's reply should describe the provision on the CBT system of an on-screen English-to-heritage language translation dictionary for English Language Learners. ITN Ref 7.3.11.2	(1) Provide evidence of Department acceptance and approval (email is acceptable) of the English-to-Language Translation Dictionary.	(TBD - Part of negotiation) 2015	
102					2016	
103					2017	
104					(Renewal 1 - 2018)	
105					(Renewal 2 - 2019)	
106					(Renewal 3 - 2020)	
107	Test Development	Periodic: English-to-Sign Language Translation Dictionary	The respondent's reply may describe the provision on the CBT system of an on-screen English-to-sign language translation dictionary. ITN Ref 7.3.11.2	(1) Provide evidence of Department acceptance and approval (email is acceptable) of the English-to-Sign Language Translation Dictionary.	(TBD - Part of negotiation) 2015	
108					2016	
109					2017	
110					(Renewal 1 - 2018)	
111					(Renewal 2 - 2019)	
112					(Renewal 3 - 2020)	
113	Test Administration	Fall ELA/L Retake: Inventory missing materials and provide a report.	Once all materials are scanned in and inventoried, districts are contacted and asked to locate and return any secure materials identified as missing. After a thorough search has been conducted by districts, materials have been accounted for, and any additional searches have been exhausted at the contractor's facilities, the contractor provides a final report listing any outstanding missing materials. ITN Reference 7.4.2	1) Final missing materials report. 2) Provide Department email reflecting approval of the report.	After each test administration, contingent on final administration dates. Finalize during negotiations. 2015	
114					2016	
115					(Renewal 1- 2017)	
116					(Renewal 2-2018)	
117					(Renewal 3 - 2019)

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
242	Test Administration	Fall EOC: Deliver paper-based test materials, including ancillary materials (i.e., memos, packing lists, materials needed for return materials) and accommodations.	For each administration, all test materials and ancillary materials must be successfully developed and delivered to districts by the critical or extremely critical date listed in Appendix B. This includes paper-based accommodations for computer-based assessments. ITN Reference 7.3.8, 7.4.1, and 7.4.7	(1) Provide proof of delivery spreadsheet listing the following for each shipment: date/time delivered, who received materials, destination address, quantity and type of material delivered. Must show proof of successful delivery to all participating districts.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
243					2015	
244					2016	
245					(Renewal 1- 2017)	
246					(Renewal 2-2018)	
247					(Renewal 3 - 2019)	
248	Test Administration	Winter EOC: Deliver paper-based test materials, including ancillary materials (i.e., memos, packing lists, materials needed for return materials) and accommodations.	For each administration, all test materials and ancillary materials must be successfully developed and delivered to districts by the critical or extremely critical date listed in Appendix B. This includes paper-based accommodations for computer-based assessments. ITN Reference 7.3.8, 7.4.1, and 7.4.7	(1) Provide proof of delivery spreadsheet listing the following for each shipment: date/time delivered, who received materials, destination address, quantity and type of material delivered. Must show proof of successful delivery to all participating districts.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)

398					August 2016	
399					August 2017	
400					(Renewal 1 - August 2018)	
401					(Renewal 2 - August 2019)	
402					(Renewal 3 - August 2020)	
403	Test Administration	PERIODIC: Develop and deliver approved practice tests and tutorials for the computer-based and paper-based assessments (sample test materials and computer-based practice tests).	According to production schedules, all practice materials must be developed and approved on a timeline to be established that offers students enough time to practice prior to each administration. All practice tests (computer-based and paper-based) must contain 10-20 sample items. For the paper-based practice materials, there should be a separate test booklet and a separate answer key booklet for teachers. These paper-based practice materials are produced in ADA-compliant PDF files for posting. Practice materials must also be produced for all accommodated versions (computer-based accommodations and paper-based accommodations, such as braille and large print). ITN Reference 7.3.7.5 and 7.4.9.6	(1) Provide Department email reflecting approval of the practice tests and tutorials that reflect the requirements for each year of the assessment. For year 1 of the contract, this will be PDFs for all grades and subjects, and computer-based practice tests for all grades and subjects that will be offered as computer-based subjects the first year. As grades and subjects are added each year (per the schedule in Appendix A), the appropriate computer-based practice tests must also be released. This delivery includes the annual delivery of requested paper-based accommodated versions, which are the only versions that are shipped to districts. (All others are published or linked for distribution.)	November 2014	
404					November 2015	
405					November 2016	
406					(Renewal 1 - November 2017)	
407					(Renewal 2 - November 2018)	
408					(Renewal 3 - November 2019)	
409						
410	Test Administration	PERIODIC: Develop and deliver a training plan for the initial training and supply materials to support ongoing training for the audiences identified in the contract.	The contractor must train Department, district, and school staff on the setup, features, management, and use of the computer-based platform and online management system at the beginning of the contract. ITN Reference 7.4.7.1 and 7.4.9.8	(1) Provide Department email confirming and approving completion of the initial training and completion of the materials to support ongoing training. (2) Provide Department email approving the final, posted training materials for each administration.	September 2014	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
411	Test Administration	PERIODIC: Develop and deliver materials to support ongoing training for the audiences identified in the contract.	The contractor must train Department, district, and school staff on the setup, features, management, and use of the computer-based platform and online management system. ITN Reference 7.4.7.1 and 7.4.9.8	(1) Provide Department email approving the final, posted training materials for each administration.	August 2015	
412					August 2016	
413					(Renewal 1 - August 2017)	
414					(Renewal 2 - August 2018)	
415					(Renewal 3 - August 2019)	
416	Test Administration	PERIODIC: Provide customer service throughout the year, with additional customer service provided at peak times leading up to and following each test administration.	The contractor will provide customer service and provide call/email logs from each week to the Department for review. ITN Reference 7.4.10	(1) Provide a report listing met requirements and any (or no) errors or unavailability of the customer service system that occurred during the period, signed by the Department team. Invoice at the end of each assessment year (end of Summer EOC administration) for the assessments from the previous year.	November 2015	
417					November 2016	
418					November 2017	
419					(Renewal 1 - November 2018)	
420					(Renewal 2 - November 2019)	
421					(Renewal 3 - November 2020)	
422	Test Administration	PERIODIC: Inventory, store, and destroy used and unused test materials as described in the contract.	The contractor will inventory and store unused test and answer books, manuals, and other materials for a period of at least six months, and used documents containing student responses for a period of two years. Destruction of secure documents must be requested in writing and authorized by the Department. ITN Reference 7.4.3	(1) Provide Department approval to destroy the materials and evidence of destruction. Invoice at the end of each assessment year (end of Summer EOC administration) for the assessments from that year.	November 2015	
423					November 2016	
424					November 2017	
425					(Renewal 1 - November 2018)

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
440	Test Administration	Spring ELA/L and Mathematics: Produce reports and recommendations from all online comment forms.	Includes data file of all responses, analysis, and recommended actions, with summary of selected response questions from all online comment forms. ITN Reference 7.4.1 and 7.4.7.7	(1) Provide Department email reflecting approval of the comment form summaries and analyses.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
441					2015	
442					2016	
443					2017	
444					(Renewal 1 - 2018)	
445					(Renewal 2 - 2019)	
446					(Renewal 3 - 2020)	
447	Test Administration	Fall EOC: Produce reports and recommendations from all online comment forms.	Includes data file of all responses, analysis, and recommended actions, with summary of selected response questions from all online comment forms. ITN Reference 7.4.1 and 7.4.7.7	(1) Provide Department email reflecting approval of the comment form summaries and analyses.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
448					2015	
449					2016	
450					(Renewal 1- 2017)	
451					(Renewal 2-2018)	
452					(Renewal 3 - 2019)	
453	Test Administration	Winter EOC: Produce reports and recommendations from all online comment forms.	Includes data file of all responses, analysis, and recommended actions, with summary of selected response questions from all online comment forms. ITN Reference 7.4.1 and 7.4.7.7	(1) Provide Department email reflecting approval of the comment form summaries and analyses.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
454					2015	
455					2016	
456					(Renewal 1- 2017)	
457					(Renewal 2-2018)	
458					(Renewal 3 - 2019)	
459	Test Administration	Spring EOC: Produce reports and recommendations from all online comment forms.	Includes data file of all responses, analysis, and recommended actions, with summary of selected response questions from all online comment forms. ITN Reference 7.4.1 and 7.4.7.7	(1) Provide Department email reflecting approval of the comment form summaries and analyses.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
460					2015	
461					2016	
462					2017	
463					(Renewal 1 - 2018)	
464					(Renewal 2 - 2019)	
465					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
466	Test Administration	Summer EOC: Produce reports and recommendations from all online comment forms.	Includes data file of all responses, analysis, and recommended actions, with summary of selected response questions from all online comment forms. ITN Reference 7.4.1 and 7.4.7.7	(1) Provide Department email reflecting approval of the comment form summaries and analyses.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
467					2015	
468					2016	
469					2017	
470					(Renewal 1 - 2018)	
471					(Renewal 2 - 2019)	
472					(Renewal 3 - 2020)	
473	Test Administration	PERIODIC: Deliver the Infrastructure Trial Test	Develop and make available an infrastructure test, consisting of mock items, that replicates the size of the largest CBT and is run on the actual testing platform (i.e., users log in to the testing platform as if they were logging into a live test). ITN References 7.4.8 and 7.4.9.5	(1) Provide Department email reflecting approval of the final product and its availability. Product must be available at least 6 months prior to the first CBT administration. Updates to the test may be requested during the life of the contract, depending on its performance when used by school districts.	August 1, 2014	
474	Test Administration	Fall ELA/L Retake: Deliver Computer-Based Test forms (including accommodated versions)	Test forms are developed and available for use on the first day of each CBT administration ITN Reference 7.3.11.2	(1) Provide Department email reflecting approval of the final product and its availability.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
475					2015	
476					2016	
477					(Renewal 1- 2017)	
478					(Renewal 2-2018)	
479					(Renewal 3 - 2019)	
480	Test Administration	Spring ELA/L Retake: Computer-Based Test form delivery (including accommodated versions)	Test forms are developed and available for use on the first day of each CBT administration ITN Reference 7.3.11.2	(1) Provide Department email reflecting approval of the final product and its availability.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
481					2016	
482					2017	
483					(Renewal 1 - 2018)	
484					(Renewal 2 - 2019)	
485					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
486	Test Administration	Spring ELA/L and Mathematics: Computer-Based Test form delivery (including accommodated versions)	Test forms are developed and available for use on the first day of each CBT administration ITN Reference 7.3.11.2	(1) Provide Department email reflecting approval of the final product and its availability.	See Appendix B (Contingent upon final, approved administration dates. Will be determined during negotiations.)	
487					2015	
488					2016

1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1108	Scoring and Reporting	Fall ELA/L Retake: Handscoring of Performance Tasks	Handscoring refers to the processes necessary for determining the rating of a student's response on the writing prompts or on the performance-based tasks in ELA/L and Mathematics that respondents may propose. Both paper-based and computer-based tests will contain performance tasks, and so the Contractor must have the capability to score both hand-written and key-entered student responses. The Department requires handscoring processes that are reliable and valid, as well as efficient in terms of time and expenditures. The handscoring process must follow the handscoring specifications. The final handscoring report, as described in the ITN, is required as evidence for payment. ITN Reference 7.5.4.5	(1) Provide Department email reflecting approval of the final handscoring report.	See Appendix B. Dates to be determined as part of contract negotiation. 2015

The contractor will create a log to identify students who qualified for manual rescoring and provide this log to the Department. The log will follow the requirements specified in the SR Specification. ITN Reference 7.5.6.5	(1) Manual rescore log posted to the online management system. (2) Provide Department email reflecting receipt of log.	July 2015	
1266					July 2016	
1267					July 2017	
1268					(Renewal 1 - July 2018)	
1269					(Renewal 2 - July 2019)	
1270					(Renewal 3 - July 2020)	
1271	Scoring and Reporting	Periodic: Writing Image CD/DVD or jump drives and proof to delivery: Development of the Writing Image CD/DVD or jump drives.	The contractor will create and ship Writing images for all students who submitted a folder to be scored and ship these CDs to the districts with one CD/DVD or jump drives for each grade tested. The contractor will submit proof of delivery to the Department after all of the Writing Image CD/DVD or jump drives are delivered to districts. ITN Reference 7.5.5	1) Provide Department email reflecting receipt and approval of the sample CD/DVD or jump drives. (2) Provide proof of delivery spreadsheet listing the following for each shipment: date/time delivered, who received materials, destination address, quantity and type of material delivered. Must show proof of successful delivery to all participating districts.	July 2015	
1272					July 2016	
1273					July 2017	
1274					(Renewal 1 - July 2018)	
1275					(Renewal 2 - July 2019)	
1276					(Renewal 3 - July 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1277	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the Test Construction Specifications	The Contractor will deliver Test Construction Specifications for ELA/Literacy and Mathematics, Algebra 1, Algebra 2, Geometry, and Retake Assessments. The final specifications shall be evaluated and approved by the Department. To the extent possible, the Department expects to be involved in any test construction activities for 2015 assessments still to be completed after contract execution. ITN Reference 7.6.0, 7.6.1, and 7.6.2	(1) Test Construction Specifications are secure, and therefore the Contractor shall provide a report which indicates the completed status of Specifications posted to Secure File Transfer Protocol (SFTP). (2) Provide Department email reflecting receipt and approval of the Test Construction Specifications.	May 2014	
1278					May 2015	
1279					May 2016	
1280					(Renewal 1 - May 2017)	
1281					(Renewal 2 - May 2018)	
1282					(Renewal 3 - May 2019)	
1283	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Test Forms for Field Test and/or Operational Administrations	All paper-based and computer-based forms for the tests, as agreed upon by the Department and memorialized in the approved Test Construction Specifications, must be submitted and approved. ITN Reference 7.6.0 and 7.6.1	(1) Test forms are secure, and therefore the contractor shall post them to SFTP. The Department shall maintain a copy of the materials on file as needed for evidence of completion of the deliverable. (2) Provide Department email reflecting receipt and approval of the final paper-based and computer-based forms.	July 2014	
1284					July 2015	
1285					July 2016	
1286					(Renewal 1 - July 2017)	
1287					(Renewal 2 - July 2018)	
1288					(Renewal 3 - July 2019)	
1289	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the Sampling Plans	Detailed plan for sampling of students from the State. Sampling plan must describe the initial analyses on the SSR files, introducing plans for how to collect data, and the list of post-hoc analyses for representativeness checks when data from test administrations are in for operational processing. ITN Reference 7.6.2.2	(1) Final versions of sampling plans posted to SFTP. (2) Provide Department email reflecting receipt and approval of the sampling plans.	July 2014	
1290					July 2015	
1291					July 2016	
1292					(Renewal 1 - July 2017)	
1293					(Renewal 2 - July 2018)	
1294					(Renewal 3 - July 2019)	
1295	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Drawing Samples for Operational and/or Field Test Administrations	Delivering the data files including sampled units from the populations and the respective reports. Sampling report must describe the initial analyses on the SSR files, procedures for how to collect data, evaluate the representativeness of resulting sample and a list of post-hoc analyses for representativeness checks when data from test administrations are in for operational processing. ITN Reference 7.6.0, 7.6.1, and 7.6.2.2	(1) Data files, including sampled units from the populations, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the samples.	August 2014	
1296					August 2015	
1297					August 2016	
1298					(Renewal 1 - August 2017)	
1299					(Renewal 2 - August 2018)	
1300					(Renewal 3 - August 2019)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1301	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of the SES Specifications	Preparing a detailed plan for conducting all scaling and equating plans and procedures, scoring plans and procedures. The plan should include a comprehensive and detailed timeline for all tasks and events. The plan should also provide a detailed description of the outcomes produced from the operational and/or field test SES activities, including data files and reports. The plan must be vetted by TAC members. ITN Reference 7.6.2.1	(1) SES Specifications (secure) posted to SFTP. (2) Provide Department email reflecting receipt and approval of the SES Specifications.	December 2014	
1302					December 2015	
1303					December 2016	
1304					(Renewal 1 - December 2017)	
1305					(Renewal 2 - December 2018)	
1306					(Renewal 3 - December 2019)	
1307	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing SES Activities	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.0, 7.6.1, and 7.6.2	(1) Submit Final Scaled Item Parameter Estimates and Scored Files (secure files) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the files.	May 2015	
1308					May 2016	
1309					May 2017	
1310					(Renewal 1 - May 2018)	
1311					(Renewal 2 - May 2019)	
1312					(Renewal 3 -May 2020)	
1313	Scaling, Equating, Scoring, and Special Psychometric Studies	Spring ELA/L and Mathematics: Develop Calibration Sampling Specifications	The contractor's sampling specifications must include analyzing the most recent SSR files and establishing a road map for gathering the required data proven to represent the demographic characteristics of the state and student performance. The specifications will also address the steps, procedures, and software required for replication of the sampling procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration. ITN Reference 7.6.2.2	(1) Submit final Calibration Sampling Specifications via SFTP. (2) Provide Department email reflecting receipt and approval of the specifications.	(Dates to be negotiated) 2015	
1314					2016	
1315					2017	
1316					(Renewal 1 - 2018)	
1317					(Renewal 2 - 2019)	
1318					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1319	Scaling, Equating, Scoring, and Special Psychometric Studies	Spring EOC: Develop Calibration Sampling Specifications	The contractor's sampling specifications must include analyzing the most recent SSR files and establishing a road map for gathering the required data proven to represent the demographic characteristics of the state and student performance. The specifications will also address the steps, procedures, and software required for replication of the sampling procedures by the Department. The specifications will be reviewed by the Department and TAC members, if necessary, and updated by the contractor for each subsequent administration. ITN Reference 7.6.2.2	(1) Submit final Calibration Sampling Specifications via SFTP. (2) Provide Department email reflecting receipt and approval of the specifications.	(Dates to be negotiated) 2015	
1320					2016	
1321					2017	
1322					(Renewal 1 - 2018)	
1323					(Renewal 2 - 2019)	
1324					(Renewal 3 - 2020)	
1325	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Creating and Finalizing Technical Reports	Preparing Technical Reports, as described in section 7.6.3.2. Note that Table of contents listed in 7.6.3.2 includes the minimum requirements for the report. Collecting Feedback from the Department and Technical Advisory Committee (TAC), finalizing the reports after incorporating the feedback, and submitting the final versions of the reports to the Department. ITN Reference 7.6.3.2	(1) Submit initial versions and the final versions of Technical Reports (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the technical reports.	December 2015	
1326					December 2016	
1327					December 2017	
1328					(Renewal 1 - December 2018)	
1329					(Renewal 2 - December 2019)	
1330					(Renewal 3 - December 2020)	
1331	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Linking Plan: Scale Linking Plan for transitioning from FCAT 2.0 Reading & Mathematics and EOC Algebra 1 & Geometry to the Florida Standards Assessments	Scale Linking Plan for transitioning from FCAT 2.0 Reading & Mathematics and EOC Algebra 1 & Geometry to the Florida Standards Assessments ITN Reference 7.6.3.3	(1) Submit initial versions and the final versions of Scale Linking Plans (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the linking plans.	November 2014	
1332						
1333	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Linking Plan: Collecting Legal Opinion	Collecting legal opinion, subject to the Department's approval, about the defensibility of linking methodology. ITN Reference 7.6.3.3	(1) Submit final version of the legal opinion document (secure) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the linking plans.	October 2014	
1334						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1335	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Scales during transitioning years to find out FCAT 2.0 and EOC equivalents based on the performance of students on the Florida Standards Assessments	Conducting all linking operations and scoring activities as laid out in the approved linking specifications. ITN Reference 7.6.3.3	(1) Submit final look-up tables and scored files (secure files) to the Department, posted to SFTP. (2) Provide Department email reflecting receipt and approval of the files.	May 2015	
1336						
1337	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Standard Setting Work Plan	Prepare a Standard Setting Work plan for setting achievement level standards for ELA/Literacy, Mathematics, Algebra 1 &2, and Geometry assessments. Plan must include every detail of the methodology, internal and external data files, and the timeline for all of the activities during educator and reactor panel meetings. The Plan must be vetted by TAC members and the methodology must be approved by the department. ITN Reference 7.6.3.4	(1) Submit the final version of Standard Setting Work Plan and relevant materials, such as slides (secure materials), posted to SFTP. (2) Provide Department email reflecting receipt and approval of the documents.	January 2015	
1338	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Implement Achievement Level Standard Setting Meetings	Hold the required meetings and collect recommended cut scores from all relevant groups, as described in ITN Reference 7.6.3.4	(1) Submit the initial version of the Standard Setting Technical Report (secure file), including recommended cuts and impact data, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.	October 2015	
1339	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Finalizing Standard Setting Technical Report	Preparing Technical Reports, as described in section 7.6.3.4. Collecting Feedback from the Department and Technical Advisory Committee (TAC), finalizing the reports after incorporating the feedback, and submitting the final versions of the reports to the Department. ITN Reference 7.6.3.4	(1) Submit the final version of the Standard Setting Technical Report (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the technical report and excel tables with interactive impact data and graphs.	November 2015	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1340	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Vertical Scaling Specifications	Preparing a detailed plan for conducting all vertical scaling procedures. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.5 The plan must be vetted by TAC members. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Post the plan for Vertical Scaling (secure file) via SFTP. (2) Provide Department email reflecting receipt and approval of the Vertical Specifications.	November 2014	
1341					(Renewal 1 - November 2017)	
1342	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Vertical Scaling Activities and Preparing Technical Report	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.3.5 (Repeated in contract renewal)	(1) Submit Final Technical Report and Scored SSR Files (secure files), including vertically aligned scale scores, to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2015	
1343					(Renewal 2 - August 2018)	
1344	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Scale Drift Study Specifications	Preparing a detailed plan for conducting scale drift study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.6 The plan must be vetted by TAC members. ITN Reference 7.6.3.6	(1) Submit the plan for conducting the scale drift study (secure) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the scale drift study specifications.	(Renewal 1 - July 2017)	
1345						
1346	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Scale Drift Research and Preparing Technical Report	Conducting all scaling and equating, and scoring activities as laid out in the specifications. ITN Reference 7.6.3.6	(1) Submit Final Technical Report and rescaled item parameters (secure files) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	(Renewal 2 - August 2018)	
1347						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1348	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of Specifications for Comparability Between Devices Delivering Assessments	Preparing a detailed plan for conducting comparability study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.7 The plan must be vetted by TAC members. The plan should include the degree of comparability of item-level and test-level statistics across devices. The plan should include the degree of comparability of item-level and test-level statistics across various input types. For the questions above, the plan should address to what degree of comparability can be obtained through scaling items onto a single metric, linking or concordance. The plan should also include what interactions exist among device, input type and item/task characteristics, grade, subject, and relevant student characteristics. ITN Reference 7.6.3.6.1	(1) Submit the plan for conducting the comparability study (secure file) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2014	
1349						
1350	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Performing Study for Comparability Between Devices Delivering Assessments, Preparing its Final Report, and Recommendations with TAC Committee	Conducting all of the planned analyses, preparing its technical report, and sharing the findings and recommendations with TAC members. ITN Reference 7.6.3.6.1	(1) Submit Final Report and Recommendations to the Department. These materials are secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2015	
1351						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1352	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of a study plan for linking Florida Standards Assessments to other assessments measuring the same standards	Preparing a detailed plan for conducting the linking study. The plan should include a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.8 The plan must be vetted by TAC members. The plan should include a review of the most promising and most feasible methods in linking, discuss the technical feasibility of such methods, and explain the process of establishing the linking relationship(s) in detail. ITN Reference 7.6.3.6.2	(1) The plan for conducting comparability study is secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2015	
1353						
1354	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Florida Standards Assessments to other assessments	Conducting all of the planned analyses, preparing a final technical report, and sharing the results of linked relationships with TAC committee to discuss the validity of interpretations. ITN Reference 7.6.3.6.2	(1) Submit Final Report and Recommendations (secure files) to the Department via SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2016	
1355						
1356	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Development of a study plan for the linking Florida Standards Assessments to International Assessments	The Contractor's plan will include, review of the most promising and most feasible methods likely to be used in international linking, discuss the technical feasibility of each method given the nature and design of the Florida Standards Assessments and those of international assessments such as PISA and TIMSS, propose method(s) for linking the scales of assessments, propose alternative ways for collecting data, explain the process of establishing the linking relationship(s) in detail, and provide a comprehensive and detailed timeline for all tasks and events, as described in section 7.6.3.9. The contractor will share the report with the Department and its TAC members. Upon approval from the Department, the contractor will finalize the plan for the linking. ITN Reference 7.6.3.6.3	(1) The plan for conducting the linking study is secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the study specifications.	November 2015	
1357						

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1358	Scaling, Equating, Scoring, and Special Psychometric Studies	Periodic: Linking Florida Standards Assessments to International Assessments	Conducting all of the planned analyses, preparing a final technical report, and sharing the results of linked relationships with TAC committee to discuss the validity of interpretations. ITN Reference 7.6.3.6.3	(1) Submit Final Report and Recommendations to the Department. These materials are secure, and therefore contractor shall post them to SFTP. (2) Provide Department email reflecting receipt and approval of the documents and files.	August 2016	
1359						
1360	Program Management	Periodic: Production Schedule	The production schedule shows the Department's beginning and ending review dates by test document for each review round. ITN Reference 7.7.2	(1) Appearance of schedule in weekly management report (2) Provide Department email reflecting approval of proposed or revised production schedule.	April 15, 2014	
1361					April 15, 2015	
1362					April 15, 2016	
1363					(Renewal 1 - April 15, 2017)	
1364					(Renewal 2 - April 15, 2018)	
1365					(Renewal 3 - April 15, 2019)	
1366	Program Management	Periodic: Program Management Meetings	The contractor will coordinate regular management meetings between the contractor and Department staff. The number and type of meetings are provided in 7.7.5 of the ITN.	(1) Include support for all meetings since the previous invoice. (2) Provide the meeting costs, a final agenda, and a final list of attendees for each meeting.	2015	
1367					2016	
1368					2017	
1369					(Renewal 1 - 2018)	
1370					(Renewal 2 - 2019)	
1371					(Renewal 3 - 2020)	
1372	Program Management	Periodic: Program Management Staff	The work described in the ITN constitutes a large, complex, challenging program that requires year-round activity and close attention to overlapping tasks for different years and the impact on project resources. The contractor is expected to provide a sufficient number of highly-qualified personnel to work closely with the Department to manage the contract. Specific requirements are in 7.7.2 of the ITN.	(1) Include support for program management staff operational for the invoice period. (2) Provide an organization chart with the appropriate staff indicated for each invoice period. (Quarterly invoices to occur in February, May, August, and November)	2015	
1373					2016	
1374					2017	
1375					(Renewal 1 - 2018)	
1376					(Renewal 2 - 2019)	
1377					(Renewal 3 - 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1378	Program Management	Periodic: Program Management Reports: Weekly Management and Action Item Report	The Weekly Management Report and Action Item Report will report the status of recent and upcoming tasks, highlighting those leading up to deliverables and critical tasks, report progress on program issues, identify unresolved issues, and maintain a list of requests requiring change orders or amendments. The weekly report will be provided to the Department by no later than noon one day prior to the weekly program management conference calls and will reflect the previous week's work. ITN Ref 7.7.6	(1) For each invoice period, provide one management report from each month since the previous invoice period. (Quarterly invoices to occur in February, May, August, and November)	2014	
1379					2015	
1380					2016	
1381					(Renewal 1 - 2017)	
1382					(Renewal 2 - 2018)	
1383					(Renewal 3 - 2019)	
1384	Program Management	Periodic: Annual Program Review	Review will include a record of the contractor's services and deliverables in response to contractual/ITN requirements. This review must identify major program accomplishments and successes, as well as areas of the program that require changes and improvement in the upcoming year. The review is intended to be a history of program events and to describe recommended improvements or changes for subsequent years. The annual review will be based on information gathered by the contractor's program and project management staff throughout the year. The review will address all aspects of program service and products including management, technology, interpretive products, communications, development, test production, test administration, materials shipping/pickup, scoring, and reporting processes. It will also follow the annual administrative cycle, beginning with fall and ending with the following summer. ITN Reference 7.7.6	(1) Provide evidence of Department acceptance and approval of the annual program review for the previous administration year.	November 2015	
1385					November 2016	
1386					November 2017	
1387					(Renewal 1 - November 2018)	
1388					(Renewal 2 - November 2019)	
1389					(Renewal 3 - November 2020)	

Attachment 1b - DELIVERABLES PRICING

Specify Component A, B, C, D or E (A-D): _____

	A	B	C	D	E	F
1	**Deliverable Category**	**Contractor Deliverable**	**Deliverable Description**	**Evidence of Completion**	**Due Date(s)**	**Deliverable Price**
1390	Program Management	Periodic: Program Management Reports: Collect Accounting Reports	A summary of the Quarterly Accounting Reports, including expenditures by program task and level of effort as well as expenditures and balances of Reimbursable Funding Categories identified in Section 7.7.9, including balances resulting from executed change orders and contract amendments. ITN Ref 7.7.6	(1) For each invoice period, provide the quarterly accounting reports. (Quarterly invoices to occur in February, May, August, and November)	2014	
1391					2015	
1392					2016	
1393					(Renewal 1 - 2017)	
1394					(Renewal 2 - 2018)	
1395					(Renewal 3 - 2019)	
1396	Program Management	Periodic: Final Delivery of Materials	The contractor agrees to deliver to the Department, upon request, all materials and products in all forms that are developed for and used in conjunction with this program, including test books, answer documents (paper and PDF), final electronic source files of interpretive products, software source code, and ancillary materials, PDFs, and electronic files within 30 days following acceptance by the Department of the final report for the program. ITN Ref. 7.7.10	(1) Provide evidence of Department acceptance and approval (email is acceptable) of the final program report and acceptance of all materials.	[TBD - either November 2017, November 2018, November 2019, or November 2020, depending on whether the base is extended into one, two, or three one-year renewals]	

Table 7.7.7.1 provides information about the number, expected length, approximate number of participants, and estimated cost of such meetings.

DRUG-FREE WORKPLACE
(will be considered in case of identical tie replies)

Preference shall be given to businesses with drug-free workplace programs. Whenever two or more bids which are equal with respect to price, quality, and service are received by the state or by any political subdivision for the procurement of commodities or contractual services, a bid received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. Established procedures for processing tie bids will be followed if none of the tied vendors have a drug-free workplace program. In order to have a drug-free workplace program, a business shall:

1) Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession, or use of a controlled substance is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2) Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3) Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in subsection (1).

4) In the statement specified in subsection (1), notify the employees that, as a condition of working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction of, or plea of guilty or nolo contendere to, any violation of Chapter 893 or of any controlled substance law of the United States or any state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5) Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community, by any employee who is so convicted.

6) Make a good faith effort to continue to maintain a drug-free workplace through implementation of this section.

As the person authorized to sign the statement, I certify that this firm complies fully with the above requirements.

Vendor's Signature

DATE AND DESCRIPTION OF SERVICES:	*Hawaii State Assessments 7/2006–6/2014* *Hawaii End-of-Course Prime 8/2012–6/2014* *Hawaii Alternate Assessment 6/2012–6/2015* AIR delivered the paper-based Hawaii State Assessments (HSA) from 2006 through 2010, before the HSA moved completely online for the 2010–2011 school year. We currently test 120,000 students in grades 3–8, 10, and 11 in reading, mathematics, and science each year, including ~1,000 technology-enhanced, machine-scored constructed-response items. We also administer the assessment for students taught in the Hawaiian Language Immersion Program at grades 3 and 4; online high school end-of course assessments (American History, American Government, Algebra I and II, and Expository Writing); and the adaptive, task-based Alternate Assessment for Students with Disabilities.

1. Executive Summary

1. Executive Summary

Overview of Solution

For more than a decade Florida has been nationally recognized as a pioneer in innovative education reform. Florida's reforms have yielded unprecedented improvements in student achievement, demonstrated by improved National Assessment of Educational Progress (NAEP) scores, a closing of the achievement gap, and increased graduation rates. Florida has experienced success in implementing major accountability reforms for schools and districts, with the A to F grading system; for students, with statewide third-grade progression requirements and high school graduation standards; and for teachers and administrators, with educator evaluation based on student outcomes. Even the accreditation standards for teacher preparation institutions now include components to account for the effectiveness of the newly minted educators based on their effectiveness in improving student outcomes. Each of these education reforms depends on fair, accurate, and transparent measures of student achievement. Continuity of the reforms depends on the integrity and success of the underlying assessments and data.

The Florida Standards Assessments (FSA) will yield the data on which Florida's reforms rely. These policy uses are high stakes, and require timely data. Florida seeks common core tests that have been field-tested and are ready for operational administration by spring 2015. Florida cannot afford to risk not having an assessment system in place that will serve these purposes. The assessment must measure the full breadth and depth of the Common Core State Standards (CCSS), ensuring full and accurate measurement of the intended curriculum for each student.

Governor Scott has indicated that the assessment system must

- not significantly increase the testing time required;
- not significantly increase the cost of testing to states, districts, or schools;
- allow students to test as late in the school year as possible;
- meet the same high psychometric standards as the current assessments, including reliability and evidence of validity;
- provide a basis for comparing performance to other states; and
- require technology that can be supported without significant additional investment.

In addition, the ITN anticipates continued policy innovation. Therefore, the state requires

- the ability to integrate custom, Florida-owned items in the test starting after the initial administration without breaking trend lines (we propose to integrate field-test items even the first year);
- the ability to review items starting the first year to ensure that they meet Florida community expectations and cohere with community standards; and
- innovative, thoughtful use of technology to measure the important skills and knowledge embodied in the standards in deeper ways without imposing additional barriers to accessibility.

Our proposed solution offers Florida two different options for the baseline, first-year test, with the two options differentiated by cost, testing time, and the types of measurement used. Both options offer flexibility for the test

to evolve at Florida's discretion over time. The two options for the baseline, first-year test include

- the Student Assessment of Growth and Excellence (SAGE); and
- the Smarter Balanced Assessment (Smarter Balanced).

SAGE was developed in partnership with the state of Utah to measure the full breadth and depth of the CCSS. Smarter Balanced was developed by the Smarter Balanced Assessment Consortium. Both item banks were designed to support adaptive assessments, and therefore offer broad and robust pools from which to select fixed forms. The two options differ in cost, testing, and turnaround time and both will be fully field-tested and calibrated in spring 2014. The terms of use of each test allow Florida to enhance them with Florida items, to modify the blueprints even the first year, and to select fixed-form tests.

Within, we propose to deliver items selected from either bank, assembled onto fixed forms. These items will be vetted by Florida committees before administration. Each year, beginning in 2014–2015, we will embed Florida-owned items in the tests, building a Florida-owned item bank.

Our proposal begins with a brief survey of the policy demands placed on the FSA, and identifies technical and timeline requirements. For example, Florida's Grade 3 Reading guarantee requires that the FSA offer a reliable Reading score (not only the combined English Language Arts score), and that the cut score separating level 1 from level 2 be established with this use in mind. We offer a plan to meet those needs and deliver results by mid-May, when they are required. Throughout, we offer a plan that will ensure that the FSA is appropriate for the uses to which it must be put, and that it will do so meeting the highest professional standards.

Our plan achieves very fast turnaround, enabling Florida to push testing windows into April, if so desired, allowing more instruction before assessment. We shorten the timeline through innovative, but well-proven, uses of technology. Two key innovations include the use of powerful machine-scored constructed-response items to maintain measurement rigor while allowing immediate reporting, and the introduction of "real-time-ID" labels.

Real-time-ID speeds paper processing. In the past, cleanup of data from online tests proceeded much faster than paper tests. For online testing all students must be positively identified prior to testing. Paper tests often rely on hand-gridding of identifiers for mobile students. This imparts a double blow on timelines—the data is error prone because it is hand gridded, and cleanup cannot start until after the books are scanned. Real-time-ID labels allow schools or districts to enroll students and print labels in real time. The error rate is nearly eliminated because the data can be validated on entry. Because the student associated with the label is known immediately, cleanup can begin as soon as the label is printed.

Cumulatively, our approach provides Florida a robust, calibrated common core item bank from which to build first-year forms. It provides national and international benchmarks, and standard setting, psychometric, and validity studies that will support the high-stakes uses for which the FSA is destined. We offer well-proven systems that use technology to improve measurement, enhance quality, and speed results.

Who We Are

Based in Washington, DC, the American Institutes for Research (AIR) is a not-for-profit organization providing research, assessment services, and technical assistance. We are over 1,500 people working to improve lives in communities at home and around the world. Our mission calls for us to turn the best research into practice, which we do in every arena in which we work. In student assessment, our commitment is evidenced by our success delivering:

- a testing system with a very small footprint in the schools. We have designed the system to work on the newest mobile devices as well as minimally equipped, older computers, with minimal bandwidth, and with little or no technical support in the schools. Within, readers will find that three times more computers in use in Florida schools meet our minimum requirements than meet the minimum requirements specified in the ITN.
- tests to all students, regardless of their needs. Our system offers the most robust set of accessibility tools in operational use in the industry, as well as compatibility with most assistive devices. In some states where we work, all students eligible for the general education accountability tests test online, including students who are blind, have severely restricted movement, are deaf, or (through our secure print-on-demand feature) risk seizure if they look at computer screens.
- a broad array of machine-scored item types, including a variety of machine-scored constructed-response item types that can be scored with near-perfect reliability. For example, in Mathematics, we were the first to introduce machine-scored items in which students respond with an equation or expression, and exploit sophisticated symbolic algebra algorithms to score the responses. Our equation-scoring engine can even award partial credit, for example, awarding credit for an equation with the correct structure, even if the answer is not perfectly correct.

These items facilitate measurement of deep knowledge and skills while simultaneously making instant reporting possible. In many states in which we work, students and educators receive electronic reports within seconds of completing tests.

We are pleased to be able to offer a mature solution. AIR has been delivering adaptive and fixed-form online tests for 7 years. In addition to millions of operational tests in Oregon, Delaware, Hawaii, Minnesota, and Ohio, our online testing system recently delivered the Smarter Balanced Assessment Consortium's pilot test to over half a million students across 21 states. This spring, we will serve approximately 5 million Smarter Balanced students. Our system is versatile, works well within schools, and is easy to use—all characteristics that enable us to extend service to so many states, schools, and students in such short order.

For this project we have teamed with Data Recognition Corporation (DRC). Our solid partnership with DRC extends across many states, including the Smarter Balanced Assessment Consortium. Among the very few organizations that have the test processing capacity to serve Florida on the required timelines, only DRC has achieved ISO 9001:2008 certification, ensuring that their processes are replicable and reliably followed. DRC brings 30 years of experience, and has successfully processed and handscored millions of tests for large-scale statewide assessments, including Alabama, Alaska, Louisiana, Nebraska, Ohio, Oklahoma, Pennsylvania, South Carolina, and Washington. One of the most experienced test-

ing contractors in the nation, DRC scores and reports assessment results for more than 4.5 million students across the country.

Should Florida select our team, DRC plans to establish handscoring facilities in Florida, keeping significant employment in the state and contributing to the state's economic development.

Project Leadership Team

Capable, experienced organizations with the capacity to do the job are a necessary condition for success. Focusing these capabilities effectively requires experienced and capable leadership. We offer Florida our A-team lineup. Key staff include

- Kevin Murphy, a director of state programs at AIR, typically oversees the project directors on multiple projects. Mr. Murphy will be committed full time to ensuring the success of Florida's program as our proposed full-time senior program manager. A Project Management Institute (PMI) certified manager, Mr. Murphy has more than 12 years of experience directing multi-million dollar, statewide assessment projects. For 8 years at AIR, he has successfully led the paper-and-pencil testing program in Ohio, managed projects to transition Hawaii and Delaware from paper-and-pencil testing programs to 100% online, and managed Minnesota's dual-mode program. He is experienced in all aspects of assessment projects, including test development, paper-and-pencil and computer administration, psychometrics, scoring, reporting, and professional development. Mr. Murphy also brings 6 years of classroom teaching experience. Mr. Murphy received his B.A. in business from Lehigh University and his M.A. in secondary education from Hunter College.
- Dr. Harold Doran, our proposed lead psychometrician, has served Florida on its value-added project, the data for which will eventually come from the FSA. Florida has seen firsthand Dr. Doran's ability to render sophisticated technical information comprehensible to the stakeholders whose lives it affects. Florida has also watched as Dr. Doran interacted with some of the nation's leading technical experts on its Value-added Technical Advisory Committee. In addition to supporting the psychometrics of large-scale assessment programs, Dr. Doran is an expert in state assessment policy and has helped states complete studies needed for a successful assessment peer review with the federal government, including work for the District of Columbia, Delaware, Hawaii, Indiana, Michigan, Oregon, and Wisconsin. Dr. Doran was appointed by then-Secretary of Education Margaret Spellings to serve on the U.S. Department of Education's National Technical Advisory Committee.
- Sandra Durden, our proposed project manager for test development, has more than 20 years of experience in the field of education, including 10 years in the assessment industry and 10 years as a K–8 educator. At AIR, she is working on performance tasks for the Smarter Balanced Assessment Consortium and item development for state programs and K–2 formative assessments. Prior to joining AIR, Ms. Durden worked at Pearson and Harcourt, where she served most recently as director of research and development and was responsible for all phases of new product research, design, and development for learning assessments.
- Stacy Tsakeris will serve as project manager, computer-based testing. Ms. Tsakeris is managing the quality control for the Smarter Balanced field testing in 24 states and managing the test content documentation of the Open Source software that will

be available to the Smarter Balanced states. Ms. Tsakeris has more than 10 years of experience in software project management, and has earned her PMP, her M.B.A., and her B.S. in computer science and engineering. She reports directly to Selina Tolosa, who directs our software group. For Florida, Ms. Tsakeris will be supported by our most experienced team of software project managers and engineers. These include

- Jeremy Fisher, software project manager, test delivery, M.S. (systems development management);
- Aaron Newman, senior application developer, M.S. (electrical engineering and computer science);
- Shailesh Gattewar, software project manager, student registration, M.B.A. and M.A. (computer science), PMP;
- Anil Chevuri, senior application developer, B.E. (electrical engineering);
- Zorina Alliata, software project manager, item banking, M.B.A., PMP;
- Dipesh Mamtora, senior application developer, M.B.A. and M.S. (electrical engineering);
- Brian Kane, software project manager, Ph.D. (astronomy), PMP; and
- Paul Van Wamelen, senior application developer, Ph.D. (mathematics).

- DRC's Peter Tressel (M.B.C., PMP) is the proposed project manager, paper-and-pencil operations. Mr. Tressel will serve as DRC's project manager, overseeing and facilitating DRC's work on the Florida Standards Assessments and leading manufacturing and processing of paper tests. Mr. Tressel has nearly 15 years of project management experience directly related to large-scale, statewide assessment programs. In his current role at DRC, Mr. Tressel provides overall management and direction for DRC as a subcontractor to AIR in Minnesota and Ohio. In addition to his work in the testing industry, Mr. Tressel has more than 20 years of related experience with a variety of writing and editing projects and activities.
- Ms. Sherri Wolf will lead our handscoring efforts on behalf of Florida and set up and manage the new scoring centers in Florida. Ms. Woolf is vice president of performance assessment services. Ms. Woolf will oversee all handscoring activities for the project. Ms. Woolf has more than 20 years of educational assessment experience, and has managed performance assessment activities for Alabama, Arkansas, Kentucky, Louisiana, Minnesota, Nebraska, North Carolina, Ohio, Oklahoma, Pennsylvania, and South Carolina.

In addition to this leadership team, AIR and DRC have assigned full-time project managers for handscoring (Wendy Marik), test administration (Meredith Durgin), and scoring and reporting (Cathy Kugler).

Summary

We offer Florida the choice between two large, common core item banks, each of which is field-tested and delivered in our system. That system is designed to work within the constraints of real school environments. We find nearly a million computers in Florida that meet our system's requirements—triple the number that meet the requirements outlined in the ITN.

Our proposed plan is guided by clear and detailed understanding of the intended uses of the FSA, and is designed to support those uses with the highest professional quality. We propose to do so while shortening the timeline between testing and reporting, allowing Florida to move testing windows closer to the end of the school year.

2. Qualifications and Experience

2. Qualifications and Experience

Backround

In many ways, AIR has been working on this proposal for more than a decade. During that time, AIR's team has proven our ability to support states in the development of innovative and customized standard-based assessments, groundbreaking psychometric advances, and the transition to online testing.

In addition to developing customized statewide assessments beginning with the first California State High School Exit Exam in the 1990s, AIR is a leader in developing assessments to measure the full breadth and depth of the Common Core State Standards (CCSS) that underlie the Florida Standards Assessment (FSA). These efforts include the Student Assessment of Growth and Excellence (SAGE) developed in partnership with the state of Utah and the Smarter Balanced Assessment Consortium (Smarter Balanced). For both of these efforts, AIR's test development staff and technologies led the development of the vast majority of technology enhanced items. For Smarter Balanced, AIR also developed a full set of open-source scoring engines. We bring experience with traditional and technology-based items for standards-based assessment using evidence-centered design, permissioned and commissioned stimuli, and a unique understanding of the nature of building an item bank for testing. AIR has consistently experienced item acceptance rates above 90% in our state assessment contracts, at volumes of 15,000 items per year. On the National Assessment of Educational Progress (NAEP) contract, we completed item development with National Assessment Governing Board (NAGB) acceptance rates above 95%.

AIR is the undisputed leader in online testing for statewide assessment. We have transitioned states to online in a single year and have successfully delivered the identical technology- and media-intensive assessments where previous contractors have failed. We currently deliver all online statewide assessments in Oregon, Hawaii, Delaware, Minnesota, and Ohio, and have recently won and started contracts to deliver the online testing in Utah, Missouri, and Michigan beginning in spring 2014. Just this month, AIR also won new contracts to continue delivering online testing in Ohio and Oregon. For the Smarter Balanced Assessment Consortium, we successfully delivered the testing system for the 2013 pilot test for more than 800,000 students in 23 states and will deliver more than 15 million tests during a single Field Test window in spring 2014, including 95% of the students in California.

Our testing delivery system is proven and leads to faster and more comprehensive adoption of online testing. We have led multiple states to 99+% online testing in the first year of testing programs, while other vendors have not achieved 90% after 10 years. Our system has the smallest technology footprint possible in the school and does not require proctor caching. AIR has proven our ability to deliver tests with 1/5 the bandwidth required by the planned PARCC system, with full reliability, expanding the number of schools that can successfully test online. We have proven the ability to deliver on the widest range of devices, from the oldest computers to the newest tablets.

We are committed to 100% accessibility in online testing for all students and are proud that virtually all students are receiving fully accessible adaptive tests in Hawaii and Oregon. AIR is the only system with an operational track record delivering the full set of PARCC accommodations. No existing system is more accessible than ours, and only our sys-

tem has been proven in real statewide accountability tests.

Beyond online testing, AIR has demonstrated the ability to be a vendor and partner that reaches beyond state-of-the-art practices in educational assessment and delivers innovative models, materials, and strategies that advance the field of measurement and improve the validity of student scores. In student assessment, our commitment is evidenced by our success in delivering innovations, including the following:

- The first and only ESEA-approved, full-year, multiple-opportunity, online adaptive assessments are now operational in three states, and we are starting projects to deliver the same in Utah, Missouri, and Michigan.
- Innovative, machine-scored constructed-response items are operational.
- Item sharing of summative multiple-choice and technology-enhanced items are available across states, years before Smarter Balanced or PARCC.
- The first statewide online adaptive formative assessments are delivered in the same system as the summative assessments and measure the same constructs on the same scale.
- The first ESEA-approved adaptive alternate assessments that measure growth for students with significant disabilities are as psychometrically sound as the assessments for the general population.
- The largest and most complex, full-color, variable data score-reporting system in the industry is available, including powerful online reports and learning supports that empower educators and individual families to use information from assessments effectively.

Founded in 1946 as a not-for-profit organization, AIR conducts our work with strict independence, objectivity, and non-partisanship. We are 1,600+ people working to improve lives in communities at home and around the world. Our mission calls for us to turn the best research into practice, which we do in every arena in which we work. AIR brings 60+ years of experience in aptitude and proficiency testing, including 37 years in K–12 educational assessments. Over the years, AIR staff members have worked on 40+ state and national assessments (e.g., NAEP, the National Assessment of Adult Literacy, the Voluntary National Tests), on international assessments (e.g., TIMSS, PISA), and on assessments in Brazil, Namibia, Honduras, Tajikistan, Macedonia, and other countries.

AIR offers Florida a record of extraordinary support, particularly in the transition of new testing programs. Delivering fast transitions with quality results is not unusual in AIR's experience. During the past seven years, AIR has successfully transitioned more than a dozen separate testing programs in Minnesota, Delaware, Ohio, Oregon, Hawaii, South Carolina, and New Mexico from other contractors, and AIR met all key deliverables. As the following project descriptions demonstrate, AIR meets our timelines and deliverable requirements, including situations when aggressive timelines for project start-up/transition involve large item development efforts, creating new item banks from other sources, transitioning to entirely new standards or new assessment designs, meeting field-test windows, and delivering online testing systems. We offer this track record as evidence to support our commitment and our plan to meet Florida's timelines and requirements.

AIR and DRC, A Proven Team

For this project, we have teamed with Data Recognition Corporation, who has provided

identical services with AIR on projects in Ohio and Minnesota since 2007:

- Human scoring of identified constructed response items, including associated rangefinding
- Production, distribution, collection, and processing of all paper/pencil testing

In addition, we have proposed to expand AIR's capacity by involving DRC in two research studies (7.6.3.3 Transitioning from FCAT 2.0 and EOC Assessments to Florida Standards Assessments (FSA) – Linking the Scales and 7.6.3.6.1 Investigate the Comparability between Devices Delivering Assessments) and engaging DRC item development specialists to work alongside AIR test development leads.

DRC is one of the most experienced full-service testing contractors in the nation, with responsibility for projects involving the testing of more than 4.5 million students. DRC's current education contract base includes assessment projects for 12 states—Alabama, Alaska, Idaho, Louisiana, Michigan, Minnesota, Nebraska, Ohio, Pennsylvania, South Carolina, Washington, and Wisconsin—and the Smarter Balanced Assessment Consortium. DRC also provides printing services for large-scale assessment programs in Connecticut, Michigan, North Carolina, and Tennessee. Over the past 33 years, DRC has evolved into a full-service educational assessment company with a staff of more than 640 full-time employees and over 4,500 seasonal and temporary employees in 15 locations around the country. With its relentless focus on quality and customer service, reviewers will note that DRC does not have any issues to report under the Poor Performance Notice section of this RFP.

AIR and DRC are a proven team. In addition to partnering on three separate Smarter Balanced contracts covering a wide range of responsibilities, including item development, pilot/field-testing, and software development, AIR and DRC currently support integrated online and paper/pencil programs in Ohio and Minnesota. As a team, AIR and DRC have established inter-organizational communications and procedures, ensuring that consistently high-quality deliverables are produced on time by multiple teams. Few in the industry can match DRC's record of error-free service. The reason for this excellent record is simple: DRC's quality processes focus on doing things right the first time, identifying and resolving issues before they affect students and educators in client states. DRC is also currently ISO 9001:2008 certified in three major areas of the company: Document Services, Educational Operations, and Performance Assessment Scoring. Attaining ISO 9001 certification has enhanced DRC's already strong foundation of business quality controls.

AIR's successful subcontracting with DRC is based on three critical components:

1. Clear delineation of responsibility and expectations.
2. Accountability mechanisms.
3. Trust and integrity on the part of each player.

AIR's formal subcontract agreements outline its commitments, which include an acknowledgment of the required documents, areas of responsibility, and the products for which DRC is responsible. AIR staff review subcontractor work and hold it to the same high standards as AIR holds itself. This formal, clear communication of expectations details the means by which developed products will be deemed acceptable.

Relevant Experience on Similar Projects

Exhibit 2-1 (at the end of this section) presents a summary of relevant AIR assessment projects. Below we highlight several projects as evidence of AIR's relevant significant expertise in large-scale test development and record of accomplishment in the development and refinement of high-quality assessment instruments.

Smarter Balanced Assessment Consortium 2012–2014. Through two prime contracts and one subcontract, AIR is supporting the Smarter Balanced Assessment Consortium in seven major activities, covering the research of new item types, the development of several thousand items, the delivery of the pilot and field tests to up to 6 million students in 20+ states, and the development of the core, open-source test delivery system and automated scoring technology. The following are some highlights:

- Working with teacher focus groups from across the Consortium, AIR developed approximately 1,700 math and ELA items for the spring 2013 pilot administration.
- AIR and its partners have conducted approximately 700 cognitive labs in the Consortium states of California, Hawaii, Oregon, Pennsylvania, Michigan, Connecticut, South Carolina, Iowa, and Idaho.
- AIR delivered the testing system for the pilot test for more than 800,000 students.
- AIR, working with DRC, developed the manuals and communications materials and provided the recruiting and Help Desk support for the pilot test.

Oregon Assessment of Knowledge and Skills (OAKS) 2007–2014. AIR administers Oregon's Assessment of Knowledge and Skills Online, or OAKS Online, the first NCLB-approved online adaptive state assessment system. AIR delivers approximately 2 million adaptive tests annually to more than 335,000 Oregon students in grades 3–12 in mathematics, reading, science, social sciences, and writing in a 7-month testing window each year. AIR also helped develop and delivers Oregon's Online English Language Proficiency Assessments (ELPA). The following are highlights beyond excellent performance:

- AIR developed and implemented the first adaptive Braille testing.
- AIR's psychometrics and statistics team worked to help Oregon develop technical reports and design and implement studies that were submitted for the state's ultimately successful NCLB peer review.
- From 2007 to 2013, AIR field-tested approximately 15,000 items with a rapid turnaround time; some field-test items were analyzed and inserted into the operational item pool within a month of being field-tested.
- AIR's item banking system is used by Oregon teachers to develop items.

Delaware Comprehensive Assessment System (DCAS) 2009–2014. AIR developed and delivers the online Delaware Comprehensive Assessment System (DCAS). DCAS includes assessments for 100,000 students in grades 2–10 in reading, mathematics, science, and social studies and end-of-course exams in U.S. History, Biology, Algebra II, and Integrated Math III. It includes fully integrated benchmark and formative assessments and expansive learning supports. AIR also developed and delivers the adaptive, task-based DCAS-Alternate Assessment for Students with Disabilities. The following are some highlights:

- More than 99% of Delaware students have tested online since the initial statewide field test.

- AIR imported nearly 12,000 existing English and Spanish items and aligned them to new Delaware standards.
- AIR developed 4,000+ new items aligned to Delaware standards, including hundreds of technology-enhanced, machine-scorable, and natural language items.
- There has been exponential growth in the use of AIR's Learning Point Navigator formative system for instructional resources and diagnostic assessments.

Hawaii State Assessments (HSA) 2006–2014. AIR delivered the paper-based Hawaii State Assessments (HSA) from 2006 through 2010, before the HSA moved completely online for the 2010–2011 school year. We currently test 120,000 students each year in reading, mathematics, and science at grades 3–8, 10, and 11, including ~1,000 technology-enhanced, machine-scored constructed-response items. We also administer the assessment for students taught in the Hawaiian Language Immersion Program at grades 3 and 4. In 2012, AIR won contracts to develop online high school end-of-course assessments (American History, American Government, Algebra I and II, and Expository Writing) and our adaptive, task-based Alternate Assessment for Students with Disabilities. Both of these new assessments were developed on a very fast track and were operational in spring 2013. The following are highlights beyond excellent performance:

- More than 99% of Hawaii students have tested online since the initial statewide field test.
- Fully-adaptive Braille testing has been implemented.
- AIR developed 2,400+ new items, including hundreds of technology-enhanced, machine-scorable, and natural language items.

Ohio Assessment System 2002–2014. AIR successfully completed more than a decade of continuous support to Ohio, including item development and test delivery for more than 950,000 students. We support testing for the achievement tests in reading, mathematics, and science (as well as writing and social studies until 2009) in grades 3–8, graduation tests (OGT) in five subjects including science and social studies, English language proficiency testing (OTELA), and alternate assessments for students with disabilities. The following are highlights beyond excellent performance:

- In 2013, AIR oversaw the scoring of more than 3 million tests for more than 950,000 students.
- AIR delivered Ohio's first online pilot tests in social studies.
- AIR implemented our enhanced, full-color, variable paper score reports for the first time.
- AIR implemented the transition from a portfolio alternate assessment to our adaptive alternate assessment measuring growth.

Minnesota Assessment System 2011–2015. AIR is beginning our third year of supporting the online and paper-pencil Minnesota Assessment System for approximately 500,000 students. We support testing for the Minnesota Comprehensive Assessments (MCAs) in reading, mathematics, and science in grades 3–8, 10, and 11; monthly Graduation-Required Assessments for Diploma (GRAD) in writing, reading, and mathematics; and alternate assessments (MCA-Modified and the Minnesota

Test of Academic Skills [MTAS]). All of these have online components, including multiple-attempt adaptive testing in long windows and fixed-form testing in short windows, based on subject area. Highlights include the following:

- AIR delivered Minnesota's highly technology-enhanced science assessments with 90% less bandwidth requirements than the previous contractor, significantly enhancing school satisfaction with the assessment.
- AIR developed highly interactive science simulations for science assessments.
- AIR enhanced procedures and resources required for success.

As shown in the project descriptions above, AIR has demonstrated the ability to deliver custom state assessment programs for Florida and at scale across states. In K–12 assessments, AIR is successfully supporting state assessment projects across the country, delivering approximately 8 million tests for more than 2 million students each year.

- ~3 million assessments for more than 950,000 students in Ohio, including grades 3–8 annually since 2003, and the high-stakes Ohio Graduation Tests
- ~2 million online interim and summative assessments for 335,000 students in Oregon annually since 2007
- ~1 million online interim and summative assessments in Hawaii (120,000 students) and Delaware (100,000 students) annually since 2009
- Dual paper/pencil and online testing program delivering ~1.4 million assessments for 500,000 students in Minnesota since 2011
- Alternate Assessments of Students with Disabilities in Ohio, Minnesota, Hawaii, Oregon, South Carolina, and New Mexico
- Tests of English language acquisition on paper in Ohio and via computer in Oregon

As some additional metrics of our proven capacity, AIR annually

- develops approximately 15,000 test items;
- deploys approximately 150 separate assessments in paper/pencil and online, including approximately 1,000 fixed forms or adaptive item pools;
- answers more than 40,000 help desk calls; and
- delivers more than 25 technical and/or standard setting reports.

AIR's ability to deliver at these quantities with high-quality is based on our personnel, internal procedures, and industry-leading tools and procedures.

Other Resources

In addition to the personnel, organization, and internal procedures described above, AIR has in place all of the required facilities and other resources required to successfully administer statewide assessment programs. Below we highlight some of the other important resources we will use on this project.

Hardware and Software Resources to Support Online Assessment Programs. Three essential types of computing capacity are required to support this project:

- A robust, high-availability managed hosting environment for the item banking, test delivery, and reporting systems, along with the related supporting systems

- A day-to-day work environment for AIR's staff of content, psychometrics, score reporting, and other staff to support everything from e-mail and file storage to complex SAS analysis programs and Variable Data Intelligent PostScript Printware (VIPP) programming
- A full-scale development environment for all systems, including a vast array of software tools to manage software development

AIR hosts our ITS, TDS, reporting, and related critical assessment systems and websites in a managed hosting facility, because the scale and investment available from a dedicated hosting company far exceed what any one company can provide. We use several of Rackspace's managed hosting facilities to host the online testing for Ohio, Oregon, Delaware, Hawaii, Smarter Balanced, and other clients, as well as other core AIR assessment systems. Rackspace is rated one of the "Magic Quadrant" leaders by Gartner Research. Rackspace secured facilities are designed with redundancy at every potential point of failure. Multiple redundant Tier 1 Internet connections, router and switch configuration, real-time and backup power supplies are just examples of the components of Rackspace's Business Continuity Plan (BCP). Rackspace considers much of this information proprietary, precisely to maintain security, but Rackspace security officials are happy to meet with ODE to provide specific information in support of AIR's proposal. Rackspace delivers the best network performance in the industry, using only quality bandwidth from Tier 1 backbone providers. Its network guarantees 100% network uptime. The company has multi-gigabytes of high quality provisioned data capacity with virtually unlimited scalability. Rackspace builds in 100% availability through multiple sites, multiple redundant network connections, a redundant router and switch configuration, and multiple redundant real-time and backup power sources. It has complete network security and provides 24/7/365 support to us.

AIR manages the day-to-day work computing environment for our staff. We host all servers and applications in our main facility in Washington, DC, and support asynchronous real-time replication between key servers located at our main Washington data center and dedicated backup servers located at an IT recovery location in our California offices, using TCP/IP protocols real-time backups. Staff are equipped with any needed desktop/laptop computers and peripherals, software, wireless broadband, iPhones, Blackberries, and other communication, and are fully supported by 60 staff and our own 24-hour Help Desk.

Finally, AIR maintains a full, on-site development environment for each system. This environment is housed within our professional grade web services hosting center, supported by a team of engineers monitoring the continuous operations of the network, including servers, security, and hosted applications. This infrastructure includes 100+ servers carefully monitored, administered, and supported by our Web Services operations engineers. AIR has a comprehensive BCP that incorporates plans for specific recovery time objectives (RTO) for all core business system; alternate headquarters and remote access for virtually all of AIR's staff; and extensive insurance to get us back up and running quickly in the event of natural disasters (including floods), sprinkler leakage, broken water pipes, loss of utilities, and many other insurable events. AIR employs a full-time chief security officer, Robert McMahon, who holds a Certified Functional Continuity Professional (CFCP) from Disaster Recovery Institute (DRI) International.

AIR Processing and Scoring Center. AIR's Processing and Scoring Center, located in Columbus, Ohio, is a state-of-the-art facilities

for all packaging, shipping, receiving, processing, scanning, scoring, and storing of test materials as well as hosting the AIR Assessment Help Desk. This facility, staffed by 13 full-time and up to 300 part-time scoring, processing, Help Desk, and other temporary staff, supports assessments in Ohio, New Mexico, Delaware, Hawaii, Oregon, Minnesota, and Utah. The center's high-speed scanners, streamfeeders, 200+ workstations, and other equipment are supported by software systems that interface directly with our pre-ID, student tracking, print tracking, and other systems.

Copyright Acquisition Team. AIR has a team of staff experienced in copyright acquisition for assessment projects, including both paid and open-source materials for all content areas, including science and social studies. Their expertise includes written fiction and non-fiction, images, audio, and video for both paper/pencil and online assessments. In total, AIR acquires more than 1,000 permissions each year.

Physical and Virtual Meeting Resources. AIR has conference facilities in our Washington, DC headquarters and our other domestic offices for small and large meetings. AIR also has made significant investments in the hardware, software, and connectivity required to support virtual meetings. We use well-known, industry-standard solutions that are easily accessible by other vendors, state clients, districts, and schools. AIR has a dedicated 10-person conference services team skilled at planning and supporting virtual conferences, including for example, WebEx, Tandberg Video Conferencing, Skype, Microsoft Lync, Join.me, and Global Crossing traditional audio conference lines.

Section 508 Capabilities and Testing Best Practices. Section 508 accessibility requirements were enacted in 1998 as an amendment to the Rehabilitation Act of 1973. The regulations seek to ensure that people who have disabilities, such as the visually impaired, have equal access to all information. AIR is fully compliant with the provisions of Section 508 of the Rehabilitation Act and is proud of its reputation for delivering high-quality, complete, and accurate Section 508-compliant products to clients. AIR has developed and refined processes for (a) creating Section 508-compliant Web sites; applications; e-mails; videos; multimedia; PDF files; and Microsoft Word, Excel, and PowerPoint files; (b) testing and validating our work; and (c) performing quality assurance (QA) checks. As a result, AIR is the "go to" contractor for creating Section 508-compliant materials and Web sites for Federal Agencies and state clients, including the U.S. Department of Education, Centers for Disease Control and Prevention (CDC), multiple National Institutes of Health agencies, the National Library of Medicine). In several instances, we have remediated the accessibility work of other contractors, and we have trained Federal clients how to create Section 508 accessible products.

Ability to Absorb Additional Workload Resulting from This Project

Florida is rightly concerned with the operational capacity of offerors. The Florida Standards Assessment is one of the largest assessment programs in the industry.

AIR can deliver the Florida Standards Assessment with our existing operational capacity described above.

All of the personnel we have proposed are current AIR employees and are available to start working on this project in early 2014. Using the knowledge we have acquired supporting statewide assessments in California, Ohio, Oregon, Delaware, Hawaii, Minnesota, South Carolina, New Mexico, Utah, and elsewhere and our experience helping states transition

effectively to online testing, we have identified staff and committed them at levels that we believe are fully adequate to complete all deliverables in a timely and effective manner. Furthermore, we have contingency plans to add staff as necessary. As a leading applied behavioral and social science research organization with more than 1,500 employees, AIR retains a research staff possessing sufficient breadth and depth of capability across all areas of this Florida contract. This provides ample reserve capacity from which to draw staff as necessary. In addition to the staff identified in this proposal, AIR and its partners employ scores of other individuals who fully meet the staffing requirements in this ITN. Specifically, because of the other work we do, AIR has deep resources of content specialists, psychometricians, programmers, and other staff who can be brought to bear on this contract if necessary. For example, we have calculated that AIR has the psychometric capacity for more than twice our projected workload. We maintain this capacity because AIR employs psychometricians for much more than the administration of operational assessment projects. AIR psychometricians spend all or portions of their time performing research for NAEP and other clients, designing technical innovations, performing other contracted research, and otherwise advancing the field. This other work can be scheduled around the very specific timeframe demands of state assessment projects. The same is true for reading, mathematics, and other content specialists at AIR who normally work on research and technical assistance projects. We have identified and trained these staff to be ready to augment our staff on short notice.

In addition to personnel, AIR and DRC currently have all of the facilities required to support Florida. We will process and hand score assessments in existing DRC (Minneapolis) facilities. DRC has an unused capacity to process 10 million tests and support 1,000 additional human scorers within existing equipment and facilities.

We will host the online assessments in AIR's private cloud at Rackspace, which runs on hardware dedicated to AIR and is essentially infinitely scalable by the addition of more hardware. Our private cloud insulates Florida's performance from exogenous loads, while geographic distribution provides redundancy and eliminates server-side bandwidth restrictions.

Financial Capability

AIR has the financial resources to support this contract. As a result of the quality of our research, assessment, technical assistance, and dissemination efforts, as well as the dedication and hard work of our employees, AIR has experienced tremendous growth in the past decade. In fiscal year (FY) 2012, our revenues exceeded $300 million, and as a not-for-profit corporation, all of our net assets are retained by the organization to support future work. Unrestricted net assets currently exceed $120 million. Among other purposes, these funds are available to ensure long-term financial stability of the organization and to support investments in AIR's Assessment Program research agenda and intellectual property to support our contracts with Florida and our other clients.

Exhibit 2-1: Summary of AIR Assessment Projects Similar to Florida

Program	Summary	Similarity to Florida Standards Assessments
Smarter Balanced Assessment Consortium (multiple projects)	• Administering online pilot and field tests for ~6m students in 21 states; development and delivery of the open-source Test Delivery System; Tier 2/3 Help Desk • Developing pilot and field-test items for Smarter Balanced; responsible for development of open-source machine scoring engines; small-scale tryouts • Providing communication and recruiting support, test administration manuals, training modules, webinars, and Tier 1 Help Desk services for ~1m students	• Delivering large-scale online testing system that works on all PARCC-mandated platforms and with all PARCC-required accommodations • Cognitive lab research and item development on innovative online item types • Development of open-source machine scoring engines
Oregon Assessment of Knowledge and Skills Online	• Full-year, multiple-opportunity, online summative and interim assessments for all students	• Proven online testing system, including delivering ELA and Mathematics assessments at elementary, middle, and high school • Successful delivery of online English Language Proficiency Assessment with all accommodations
Delaware Comprehensive Assessment System	• Full-year, multiple-opportunity, online summative, interim, and formative assessments for all students	• Proven online testing system, including delivering ELA and Mathematics assessments at elementary, middle, and high school • Successful development and delivery of hundreds of technology-enhanced, machine-scorable, and natural language items
Hawaii State Assessment System	• Full-year, multiple-opportunity, online summative and interim assessments for all students (2010–2014); paper/pencil testing 2006–2010	• Proven online testing system, including delivering Science assessments at elementary, middle, and high school • Successful development and delivery of hundreds of technology-enhanced, machine-scorable, and natural language items
Hawaii End-of-Course Assessments	• Online summative assessments for all students	• Separate contract to extend the Hawaii State Assessments to include EOC assessments
Utah Student Assessment of Growth and Excellence	• Online interim and summative assessments for all students	• Developing thousands of items and preparing for Utah's first statewide online assessments

Exhibit 2-1: Summary of AIR Assessment Projects Similar to Florida (continued)

Program	Summary	Similarity to Florida Standards Assessments
Ohio Achievement Assessments	• Full paper/pencil testing program, with online adaptive formative assessments; online pilot tests of science and social studies assessments; K–12 assessments	• Successful development and delivery of ELA and Mathematics assessments at elementary, middle, and high schools • Successful online pilots to support transition to online testing, with statewide field testing in 2014
Ohio Graduation Tests	• Full paper/pencil testing program, with online adaptive formative assessments	• Successful development and delivery of high-stakes graduation tests
Minnesota Assessment System	• Dual-mode (paper/pencil and online) summative assessments for all students	• Similar to Florida in that contract covers general assessments and high-stakes graduation testing and combines paper/pencil and online testing
National Assessment of Educational Progress (NAEP)	• Test development, psychometric analysis, validity studies	• Expert psychometric expertise

Similarity in Size and Complexity to Florida Standards Assessments

- Successfully delivered the Smarter Balanced small-scale trial fall 2012 test administration and the spring 2013 pilot test to more than 577,000 students across 21 states using AIR's online Test Delivery System.
- Assisted with the development of more than 5,000 items for the Smarter Balanced pilot test.
- Conducted the rubric validation of all machined-scored items on the pilot test.
- Delivered more than 5,000 mathematics and English language arts items, including Smarter Balanced's technology-enhanced items, for the small-scale trials and the spring pilot test.
- Provided Help Desk services and support in 21 states participating in both assessments.
- Developed and delivered open-source scoring engines for machine-scored constructed-response items.

Project Description

Through two prime contracts and two subcontracts, AIR is supporting the Smarter Balanced Assessment Consortium. The first subcontract, requiring pilot item, task, and stimulus research and development resulted in AIR's successful delivery of the grade-level pilot assessments for more than 550,000 students. AIR conducted four teacher focus groups to obtain feedback and insights about the different item types and innovations that would be incorporated into future Consortium assessments. In addition to supporting research focus groups, AIR developed approximately 150 mathematics items, 350 ELA items, and 20 research questions that were administered to students across the Consortium states in cognitive laboratories. AIR trained partner vendors to also administer laboratories.

Additionally, AIR supported small-scale trials, the first administration of items to students across the 21 Consortium states. More than 11,500 students participated in the 2 1/2 week test administration. The research conducted from both the cognitive labs and small-scale trials helped to detect general effects, while also providing an opportunity for test developers to gather in-depth evidence regarding new approaches to measurement. Using the evi-

dence taken from the small-scale trials, AIR developed over 1,600 mathematics and ELA items for the spring 2013 pilot test.

AIR also supported scoring engine research by collecting released items and responses from several Consortium states to conduct training and provide an initial analysis of the AIROSE Essay Scoring Engine. AIR built scoring models and provided a data analysis of scoring information collected throughout the administration of the fall 2012 small-scale trials. In addition, AIR developed, trained, and validated two open-source, automated scoring engine prototypes, an essay scoring engine, and an equation scoring engine. The coding is available in the open-source community for feedback and potential improvement.

The subsequent contracts supported and will support the spring 2013 pilot test and the spring 2014 field test administration in addition to the pilot and field test open source test delivery system. Through both contracts, AIR oversaw the recruitment of more than one million students to participate in the pilot test. Also, AIR developed the test administration training materials for the pilot test including user manuals, online training modules, supporting system documentation, and a series of live webinars for the test administrators and school coordinators participating in the pilot test. For the spring 2013 pilot test, AIR developed the following tools for the Test Delivery System:

- Writing tools (spell check, bold, indent, bullets, etc.)
- Expandable passages
- Global notes
- Embedded ruler
- Embedded protractor
- Highlight
- Strikethrough

For the spring 2014 field test, AIR is developing the following new tools:

- Masking
- Closed captioning
- Line reader

AIR administered the spring 2013 pilot test assessments with the following online accommodations:

- Text-to-Speech
- Braille
- Spanish translation
- Spanish and English glossary

AIR also implemented a fully supported Tier 1 and Tier 2 Help Desk for the pilot test. Developing the Consortium's open-source Test Delivery System, AIR integrated all of the Consortium's systems including the item bank, reporting system, and the Test Delivery System.

The last subcontract supports field test item development and scoring. Under this contract, AIR will develop a percentage of the 22,000 items for the spring 2014 field test. Additionally, AIR will be responsible for the successful import and rendering of multiple item types into AIR's Test Delivery System prior to the field test administration.

Already, AIR performed machine scoring, used on the pilot test, through a process referred to as rubric validation. Machine scoring, or rubric validation, was implemented on approximately 904 ELA items (natural language, grid, and hot text item types) and 1,760 mathematics items (natural language, equation, and graphic response item types).

Oregon Assessment of Knowledge and Skills Online (OAKS)

Similarity in Size and Complexity to Florida Standards Assessments

- Successfully delivered more than 2 million tests per year to more than 400,000 students for Oregon's online statewide assessments in ELA (grades K–12), mathematics (grades 3–8 and high school), reading/literature (grades 3–8 and high school), science and social sciences (grades 5, 8, and high school), and writing (grades 11 and 12).
- Provided AIR's Item Banking System for Oregon's teachers to develop and store items.
- Provided AIR's Online Scoring System for Oregon's teachers to score writing assessments.
- Delivered assessments online for 100% of Oregon's students through an extensive suite of accommodations and tools (e.g., Braille, large-print, print-on-demand, text-to-speech).
- Developed the full set of technical reports to support Oregon's successful NCLB peer review approval for the first statewide, online adaptive testing system.
- Delivered, hand-scored, and reported online English Language Proficiency Assessments (ELPA). As with OTELA, Oregon's online ELPA was based on the CCSSO-developed English Language Development Assessment (ELDA) project, for which AIR served as the development contractor.

Project Description

AIR administers Oregon's Assessment of Knowledge and Skills Online, or OAKS Online, the first NCLB-approved online adaptive state assessment. AIR's Psychometrics and Statistics team worked to help Oregon develop technical reports by designing and implementing studies that were submitted for the state's ultimately successful NCLB peer review. Within a 9-month testing window that takes place each year, AIR delivers approximately 2 million adaptive tests to more than 335,000 Oregon students in grades 3–12 in mathematics, reading, science, and social studies.

Oregon uses AIR's Item Tracking System (ITS) independently to support its item development process for OAKS online. AIR's ITS is completely integrated without the Test Delivery System and can be used by state officials and educators with minimal support. Since Oregon educators write all OAKS items, OAKS Online is the only AIR assessment project that does not rely on an item development contractor for summative assessments.

Field-testing of items is fully integrated with the online testing program, allowing AIR to dramatically increase the item pool in a short period of time. AIR has supported the following in ITS:

- Since 2007 and through spring 2013, AIR field-tested approximately 15,000 items with a rapid turnaround time; some field-test items were analyzed and inserted into the operational item pool within a month of being field-tested.
- AIR actively supported the Delaware-Hawaii-Oregon-Utah item-sharing consortium.
- AIR has also assisted the Oregon Department of Education (ODE) with optimizing items and item graphics for web display.

Immediate availability of student data from the online system boosts the usefulness of online testing compared to paper-and-pencil testing, in which teachers must wait several weeks to see how students performed. For example,

- Once students finish testing, teachers have almost immediate access to data at student, classroom, school, district, and state levels.
- OAKS Online gives educators immediate access to assessment results describing students' specific strengths and weaknesses, which allows educators to easily identify student and curricular needs and target instruction to address those needs.
- To relay on-the-spot results to ODE, the OAKS system imports updates to student data daily and exports student test results nightly to ODE.

To support Oregon's educators and students, AIR provided several services for OAKS Online:

- Deployed a system for local administrators to manage system permissions and access for nearly 20,000 test administrators.
- Interacted with the field regularly to collect feedback on ease of use and identified functionality to improve the system. AIR implemented several related upgrades.
- Trained regional support staff and provided user support via our Help Desk during administration throughout the year (Help Desk hours: 7 a.m. to 6 p.m. PST).
- Provided an online training system for districts and schools to use with test administrators.
- Provided online practice tests to prepare students and to familiarize stakeholders with the test.
- Currently implementing new operational item types (which were field-tested in 2009–2012) to increase the range of cognitive complexity captured by the test, adding new features to increase accessibility, and adding a writing test.

Since 2009, AIR has been providing support for Oregon's Online Writing and Online English Language Proficiency Assessments (ELPA). For writing tests, AIR imported items and deployed tests in the OAKS system in addition to providing AIR's online distributed performance scoring system. AIR supported multiple in-state scoring sessions with groups of Oregon educators who trained, qualified, and scored the writing responses. For ELPA, AIR imported 2,000 items and developed more than 500 items for field-testing. Also, AIR configured and deployed ELPA in the OAKS system along with AIR's performance scoring system. These constructed-response items, or writing responses, are scored in AIR's Processing and Scoring Center.

Delaware Comprehensive Assessment System

Customer:

Delaware Department of Education

Contract Number and Value:

DOE2010-02 $25,413,531

Customer Address:

401 Federal Street
Dover, Delaware 19901-3693

E-mail: btouchette@doe.k12.de.us

Start and End Date of Project:

12/2009 06/2014

Similarity in Size and Complexity to Florida Standards Assessments

- Developed and successfully delivered since 2009 Delaware's first online statewide assessments, totaling approximately 500,000 tests to 100,000 students in ELA and mathematics (grades 2–10, plus high school end-of-course assessments), science (grades 5, 8, and 10, plus end-of-course assessment in Biology), and social studies (grades 5 and 7, plus end-of-course assessment in American History).
- Realigned Delaware's item banks to new standards and developed more than 4,000 items including more than 1,000 simulations and machine-scored constructed-response items.
- Delivered assessments online for nearly 100% of Delaware students through an extensive suite of accommodations and tools (e.g., large-print, print-on-demand, text-to-speech).
- Delivered interim assessments in all subjects.
- Prepared reports for Delaware's Technical Advisory Committee and convened all required Content, Bias and Sensitivity, Rangefinding, Rubric Validation, Data Review, PLD, and Standard Setting meetings.
- Delivered comprehensive Technical Reports annually including all required validity studies to support Peer Review approval.

Project Description

The Delaware Comprehensive Assessment System (DCAS) project includes summative assessments linked to fully integrated benchmark and formative assessments and expansive learning supports. In addition to developing more than 3,000 items for grade-level assessments for 100,000 students in grades 2–10 in reading, mathematics, science, and social studies, AIR developed more than 2,000 items in one year to help Delaware field-test and create seven end-of-course (EOC) assessments. The assessments in Algebra I, Integrated Math I, English II, U.S. History, and Biology were field-tested during the 2010–2011 school year and became operational in spring 2012. Two additional assessments (Algebra II and Integrated Math III) completed field-testing and became operational in January 2013.

This project, awarded in December 2009, required an incredibly fast start and entailed a complete transition from paper-and-pencil testing to online testing. The Delaware Department of Education (DDOE) required a full statewide field test of the entire item bank

with all students in spring 2010. During the first three months, AIR

- developed test specifications and blueprints;
- imported nearly 12,000 English and Spanish existing items and aligned them to new Delaware standards;
- developed 2,000+ new items aligned to Delaware standards including hundreds of technology-enhanced, machine-scorable, and natural language items;
- processed all items through appropriate DDOE and committee reviews;
- incorporated PISA items to allow the development of international benchmarks;
- developed written and web-based communications materials for all stakeholders;
- implemented roster data transfers with Delaware's student information systems;
- configured and launched our secure browser and Test Delivery System (TDS) to DDOE requirements;
- provided training to 8,644 Test Administrators; and
- delivered the spring 2010 field test beginning on April 1, 2010.

The field test was a success. All schools were able to test using AIR's TDS. When field-testing was complete, AIR conducted data review and convened standard settings in 20 grades/subjects to establish and report score scales in all subjects. The standard settings were informed by vertical scales to help articulate performance standards during a bookmark standard setting activity, resulting in standards that were reasonable and orderly across all grades. We also linked DCAS performance to international benchmarks. All Delaware schools are now testing online. DDOE has chosen to have multiple, shorter testing windows in which specific assessments (e.g., summative, blended, benchmark) are available. AIR accommodated this revised assessment schedule with a simple configuration of our TDS. With the operational launch, we deployed AIR's reporting module, which provides a single place for all reports for the DCAS, the end-of-course exams, and benchmark growth assessments. Similar diagnostic information is available whether a student takes a summative or a benchmark growth assessment. Educators can clearly see which tests a student has taken and when they were completed and can access instructional diagnostics at a level appropriate to support instructional decision-making. AIR completed the development of multiple paper and Braille forms in each grade/subject as accommodations.

AIR is actively supporting the Delaware-Hawaii-Oregon-Utah item-sharing consortium. AIR selected approximately 40–80 items per grade/subject for embedded field-testing; the focus is on technology-enhanced items. AIR delivers blended summative/benchmark assessments in Delaware. Extensive learning supports and resources complete the system, providing educators with targeted instructional material for student use, giving students interactive practice, and finishing with scorable activities to help teachers gauge the success of their lessons.

Learning Point Navigator (LPN) integrates with AIR's Online Reporting System to provide resources targeted to identify areas of weakness or to extend standards-aligned topics for students who are excelling. The system provides immediate access to standards-aligned professional development, lesson plans, and student activities. Both educators and students

(and their parents) can access the system to obtain or use learning resources. Teachers can access this system independently, or they can link directly to appropriate resources from the online testing system. One of the most powerful uses of Navigator is to extend the diagnostic reach of the assessments. Rather than take instructional time for more testing, teachers can use Navigator to distill information from instructional activities and assignments. LPN's content libraries support multiple, diverse libraries of resources. Each resource can be aligned to each set of content standards represented in the database of content standard maps. The content standard maps represent potentially diverse systems of content standards. They represent the content hierarchy for each set of standards incorporated. In the 2011–2012 school year, over 3,500 teachers accessed LPN in Delaware. Over 23,000 students worked on teacher-created assignments. In total, over 116,000 assignments were completed by Delaware students. Linked directly to a group of students' strengths and weaknesses, easy to access and use, LPN has made an immediate impact in Delaware as shown by its usage by teachers and students in only its second year of implementation. AIR continues to add instructional resources to the LPN bank. It has doubled in size since it opened in the 2010–2011 school year.

E-mail: cara_tanimura@notes.k12.hi.us

Start and End Date of Projects:

1. 07/2006	06/2014
2. 08/2012	06/2014

Similarity in Size and Complexity to Florida Standards Assessments

- Developed and delivered since 2009 more than 500,000 online statewide assessments for 120,000 students annually in ELA and mathematics (grades 3–8 and high school), science (grades 4 and 8), and end-of-course (EOC) assessments in Biology and Physical Sciences.
- Supported Hawaii's paper-and-pencil testing program from 2006–2009 and the successful transition to online testing.
- Realigned Hawaii's item banks to new standards and developed more than 4,000 new items including more than 1,000 simulations and machine-scored constructed-response items.
- Delivered assessments online for 100% of Hawaii students, through an extensive suite of accommodations and tools (e.g., Braille, large-print, print-on-demand, text-to-speech).
- Convened since 2006 Hawaii's Technical Advisory Committee and all required Content, Bias and Sensitivity, Rangefinding, Rubric Validation, Data Review, PLD, and Standard Setting meetings.
- Delivered comprehensive Technical Reports annually including all required validity studies to support Peer Review approval.

Project Description

AIR developed and delivered the paper-and-pencil Hawaii State Assessment (HSA) from 2006 to 2010. Currently AIR tests 120,000 students online each year in reading, mathematics, and science (grades 3–8, 10, and 11). In addition, AIR supports Hawaii's end-of-course (EOC) assessments in Algebra, Biology and Writing.

The Hawaii State Assessment offers up to three testing opportunities on criterion-referenced tests, measuring the state's standards, and includes selected-response and machine-scored constructed-response items. As the incumbent paper-and-pencil contractor, AIR prepared the HSA item bank for online testing, following which AIR

- developed online test specifications and blueprints;
- developed 1,400+ new items including hundreds of technology-enhanced, machine-scorable, and natural language items;
- processed new items through appropriate HIDOE and committee reviews;
- developed written and web-based communications materials for all stakeholders;
- implemented roster data transfers with Hawaii's student information systems;
- configured and launched our secure browser and TDS to HIDOE requirements;

- provided training to over 5,500 test administrators; and
- delivered the spring 2010 field test.

The HSA field test was a huge success. When field-testing was complete, AIR conducted data review and convened standard settings to establish and report score scales in all subjects. Currently, all Hawaii schools test online. Hawaii limits field-testing to the spring, and AIR developed more than 1,000 items, many of which are technology-enhanced, for embedded field-testing in 2011, 2012, and 2013. AIR is also supporting the Delaware-Hawaii-Oregon-Utah item-sharing consortium and assisting Hawaii in selecting items from the combined bank for future field-testing. In total, AIR developed 4,000+ items in reading, writing and mathematics through review and acceptance by content and fairness committees.

With its operational launch, AIR successfully deployed a reporting module, which provides a single place for all reports. For paper-and-pencil accommodations, AIR deployed an adaptive-print function and adaptive Braille function, providing students with the same adaptive testing model and multiple opportunities as students taking Hawaii's general forms.

Similar to the HSA, AIR developed and delivered Hawaii's EOC assessments with machine-scorable items that display student scores on the computer monitor immediately after students complete the exam. AIR developed more than 4,000 multiple-choice and constructed-response items that measure student proficiency of content standards and course benchmarks. Students take each exam during the last three weeks of the course.

AIR provided extensive support for accurate benchmarks to assess and evaluate student progress in three major areas:

- Improvement of curriculum and instruction and ensuring consistency throughout the state. The exams help classroom teachers focus on the most important concepts and skills and identify areas where the curriculum needs to be strengthened.
- Development and delivery of content that adequately measures skills students need to enter and succeed in first-year, credit-bearing courses. Post-secondary institutions will be able to use the results of the exams to tell high school students whether they are ready for college-level work, or if they have content and skill gaps that need to be filled before they enroll in college.
- Development and delivery of reports that assist state education leaders, educators, and the public assess progress to identify areas for improvement and evaluate the impact of state strategies for improving overall achievement.

Utah Student Assessment of Growth and Excellence (SAGE)

Customer:

Utah State Office of Education

Contract Number and Value:

136199 $39,303,646

Customer Address:

250 East 500 South, P.O. Box 144200
Salt Lake City, Utah 84114-4200

Contact:

John Jesse, Director
Phone: 801-538-7811
E-mail: John.Jesse@schools.utah.gov

Start and End Date of Project:

02/2013 01/2018

Similarity in Size and Complexity to Florida Standards Assessments

- Developing Utah's first online statewide assessments for 500,000 students, incorporating interim, formative, and summative assessments in ELA and mathematics (grades 3–12) and science (grades 4–8).
- Developing end-of-course assessments in Biology, Chemistry, Physics, and Earth Science.
- Delivered more than 10,000 items including simulations and machine-scored constructed-response items.
- Supporting extensive suite of accommodations (e.g. Braille, text-to-speech, large-print).
- Deploying online reporting system for machine-scorable items.

Project Description

AIR is developing and delivering Utah's first online assessments, the Student Assessment of Growth and Excellence (SAGE). Currently, Utah administers the state's paper-and-pencil criterion-referenced tests (CRT), but will be transitioning to the state's SAGE, an online adaptive assessment. Including an interim, formative, and summative assessment in addition to expansive learning supports, AIR will provide support for approximately 45,000 students per grade in ELA (grades 3–11), mathematics and secondary math I, II, and III (grades 3–8), and science assessments in Biology, Chemistry, Earth Science, and Physics (grades 4–8). AIR has delivered many of the 5,000 new items, including 3,600 ELA items that will replace the entire ELA item bank. AIR has conducted content and bias committee reviews, and is planning rangefinding, rubric validation, data review, and standard setting meetings immediately after the Spring 2014 Operational Field Test. AIR's formative assessment tool will include items aligned to the Utah Core Standards in mathematics, science and language arts from existing Utah item pools and from item sharing with other states. The formative item pool will include the same item types present in the summative item pool (e.g., technology-enhanced, machine-scored constructed-response). Student result data from the summative system will flow through to the formative system and direct educators to content resources.

Beginning in early 2014, the new formative assessment system will add functionality to support the administration of teacher and district-created items and tests. Beginning in summer 2013 and continuing throughout the contract, AIR and the USOE are providing in-person and webinar trainings for staff. Training materials, system tutorials, and other needed materials will be provided. A fully staffed Help Desk will be available to support teacher, school, and district use.

1. **Ohio Achievement Assessments (OAA)**
2. **Ohio Test of English Language Acquisition (OTELA)**

Start and End Date of Projects:

03/2002	06/2014

Similarity in Size and Complexity to Florida Standards Assessments

- Successfully deliver 14 achievement tests in reading, mathematics, and science for use in Ohio's 3–8 classrooms that require the scoring of 1.75 million tests for more than 800,000 students.
- Developed and successfully delivered Ohio's grades 3–8 assessments from initial design and specifications through standard setting and all operational administrations. The administration of the OAA currently includes grades 3–8 reading and mathematics and grades 5 and 8 science; administrations from 2006–2009 included grades 5 and 8 social studies and grades 4 and 7 writing.
- Conducted two successful online pilots (2012 and 2013) to support Ohio's transition to online testing using social studies content, exceeding Ohio's participation and performance expectations.
- Developed more than 8,000 items and conducted both independent field tests and embedded field tests across more than 1,100 field-test forms.
- Realigned all of the existing items from the OAA bank to Ohio's New Learning Standards.
- Collaborated with the Ohio Department of Education (ODE) on the development of test specifications, item specifications, and a style guide for the paper-and-pencil assessments. Developed test specifications, item specifications and a style guide for more than 1,000 new elementary- and middle-school level items, including simulations and other machined-scored constructed-response items.
- Built and produced operational fixed-form tests for annual spring and fall administrations of the OAA, OTELA, and Alternate Assessment, including up to 150 OAA forms each spring with embedded field-test sets. Also, AIR produced all accompanying ancillaries and special versions for each administration.
- Worked with the English Language Development Assessment (ELDA) Consortium to develop its assessment of English language learners (ELLs). Subsequent to that development, AIR worked with ODE to develop OTELA forms from the ELDA bank and write and field test OTELA items for the state of Ohio to supplement the test bank.
- Have successfully delivered the annual OTELA administration since 2007.

- Convened each of the following Ohio committees: Technical Advisory Committee, Test Steering Committee, English Language Learners Advisor Committee, and the Alternate Assessment Advisory Committee. Convened all required Content Advisory, Fairness and Sensitivity, Rangefinding, Data Review, Performance-Level Descriptor (PLD), and Standard Setting committees, as the program dictates. Since 2002, AIR has convened more than 800 meetings for the state of Ohio.
- Developed and delivered to Ohio families and educators more than five million pages of customized, color score reports every spring that incorporate variable information based on research and assessment results.
- Developed and delivered innovative professional development efforts (e.g., item writing workshops, train-the-trainer initiatives) and extensive suite of online tools (Success Suite).
- Delivered comprehensive technical reports annually, including all required validity studies to support peer review approval.

Project Description

AIR has managed statewide assessments for Ohio since work began in 2002 for the spring 2003 administration of the grade 3 reading field test. AIR develops and administers the Ohio K–8 Assessment System, a comprehensive battery that currently consists of 14 achievement tests in reading, mathematics, and science for use in Ohio's K–8 classrooms. In spring 2013, AIR oversaw the scoring of 1.75 million tests for more than 800,000 students. For students with disabilities, Ohio's alternate assessments measured the same content areas. English language learners are assessed under the OTELA, which is also managed by AIR. Since its inception, the program has been supported by extensive professional development, including workshops, online tools, and electronic reporting.

During the past decade, AIR developed items and conducted both independent field tests and embedded field tests for Ohio with more than 8,000 items across more than 1,100 embedded and independent field-test forms. We managed every aspect of test delivery, scoring and reporting, including application of millions of hand-scores to constructed-response items. AIR also worked with Ohio to develop a series of accommodated and special version forms to support students. These include bilingual test booklets, English audio and foreign-language CDs, a network of support for translations in many languages, Braille, and large-print.

Each year, AIR develops personalized assessment score reports for more than 850,000 Ohio families and educators. These enhanced, full-color paper score reports offer actionable data for families, teachers, principals, and superintendents. Web-based tools empower educational leaders to explore their assessment data and conduct their own analyses.

AIR has improved awareness about the Ohio assessment program by making the test procedures and score results easier for educators to use and understand.

- AIR's Test Information Distribution Engine (TIDE) helps keep district contact information current, allows districts to upload student pre-ID files, assists administrators in ordering test materials, and tracks shipments of test materials as efficiently as possible.
- Online and paper practice tests enable teachers to familiarize students with the test format, item types, and testing process before they take the operational test, allowing administrators and students to be prepared before testing day.

- Interpretive guides, delivered with the score reports, provide information about interpreting the data on score reports and make the score reports more accessible to parents and educators.
- Statewide professional development initiatives on both test administration and score interpretation arm educators with the information they need to take full advantage of Ohio's strengthened testing program.

AIR developed and supports OTELA. AIR was the lead contractor in the development of the original ELDA in partnership with the Council of Chief State School Officers (CCSSO), Ohio, and other participating states in 2005–2007. Under subsequent contracts, AIR worked with Ohio to create the OTELA from the ELDA and has delivered OTELA flawlessly since 2007. This work involves approximately 42,000 students in grades K–12 across five grade bands. AIR is responsible for all aspects of this paper-and-pencil program, including developing item and forms, producing special versions (Braille and large-print), applying more than 50,000 hand-scores, and coordinating all associated print, pack, ship, receive, process, scan, and reporting activities.

During the past two years, AIR supported Ohio's transition from the traditional portfolio assessment for students with disabilities to implement the Alternate Assessment for Students with Significant Cognitive Disabilities (AASCD). The model allows the state to implement an alternate assessment that is as psychometrically sound as the assessments for the general population and also measures growth in individual students. The AASCD was also the first of Ohio's operational tests to include an online component. Test administrators were required to enter their student's scores into an online Data Entry Interface. AIR worked with ODE to employ a train-the-trainer model that reached nearly 10,000 test administrators, and the test was successfully administered to more than 16,000 students. Ohio's transition was completed this past spring (2013) following a standard setting workshop and the distribution of score report data and nearly 100,000 pages of paper reports based on the new alternate assessment model.

AIR also developed Ohio's original Diagnostics Assessments in 2003 and the revamped the entire series in 2013.

This recent initiative required the development of new items, committee reviews, field testing, and operational form building in a little over 12 months' time to ensure Ohio's Diagnostic Assessments were aligned to the Common Core State Standards.

In spring 2012 and spring 2013, AIR worked with ODE to offer an online pilot opportunity across the state, assessing grade 8 and grade 4 social studies content, respectively. These pilots were in support of Ohio's commitment to next-generation testing and provided the state and its districts the chance to assess their preparedness for online assessments, interact with new and innovative item types, and practice implementing online testing in a low-stakes environment.

In addition to supporting Ohio's statewide assessment for grades 3–8, online testing pilots, English language acquisition assessment, diagnostic assessments, and alternate assessment, AIR and Ohio have partnered on two research studies on modified assessments and the "two percent" student population. These studies were completed as a partnership between AIR, Ohio, Minnesota, and Oregon under a General Supervision Enhancement and an Enhanced Assessment Grant, as well as a partnership between AIR and Ohio under an Institute of Education Sciences Grant.

Ohio Graduation Tests (OGT)

Customer:

Ohio Department of Education

Contract Number and Value:

Start and End Date of Project:

12/2006 06/2014

Similarity in Size and Complexity to Florida Standards Assessments

- Developed and successfully delivered the high-stakes graduation assessments to more than 250,000 Ohio high school students per year, with 19 administrations since 2007.
- Realigned all of the existing ELA and mathematics items from the OGT bank to Ohio's New Learning Standards.
- Developed test specifications, item specifications and a style guide for 17 different assessments, including simulations and other machined-scored constructed-response items.
- Convened each of the following Ohio committees: Technical Advisory Committee, Test Steering Committee, English Language Learners Advisor Committee, and the Alternate Assessment Advisory Committee. Convened all required Content Advisory, Fairness and Sensitivity, Rangefinding, Data Review, Performance-Level Descriptor (PLD), and Standard Setting committees, as the program dictates. Since 2002, AIR has convened more than 800 meetings for the state of Ohio.
- Developed and annually deliver to Ohio families and educators more than one million pages of customized, color score reports incorporating variable information based on research and assessment results.
- Developed and delivered innovative professional development efforts (e.g., item writing workshops, train-the-trainer initiatives) and extensive suite of online tools (Success Suite).
- Delivered comprehensive technical reports annually, including all required validity studies to support peer review approval.

Project Description

AIR has managed the Ohio Graduation Test (OGT) program since 2006 when work began for the summer 2007 administration. At the end of grade 10, the tests measure student competencies in five subjects: reading, mathematics, writing, science, and social studies. Students must pass all five parts to receive a high school diploma. Students who do not pass one or more parts of the test at the end of grade 10 have three opportunities a year to retake the tests. More than 180,000 students take the test each spring. In summer and fall, the testing populations are approximately 15,000 and 60,000, respectively.

At the start of the contract, AIR worked with ODE to phase out Ohio's prior graduation test, the NPT, with four administrations from 2007–2008. This test was reserved for students whose graduation requirements had been established prior to the implementation of the OGT for sophomores.

AIR successfully transitioned the item bank from the previous contractor and front-loaded a significant amount of item development to augment the existing item bank. AIR developed approximately 8,000 items across five subjects during the first two years. In 2008–2012, we field tested these new items on more than 400 embedded field-test forms (reading, mathematics, science, and social studies) and 14 independent field-test forms (writing). Given the high stakes associated with the OGT, AIR works with Ohio to provide extensive support for educators and students.

The most frequently used feature is AIR's online formative testing system, which has been used by more than 60,000 Ohio high school students. Using a large bank of released items, teachers can create customized formative assessments for students. The items become available for immediate use on these tests when they are deployed in our item release site. The following are examples of capabilities offered by this customization feature:

- Students and teachers can access complete formative tests on their own.
- Teachers can design short tests, drawing on one or more content standards, or they can select items by other characteristics such as item type or benchmark.
- Teachers can assemble these tests in their own account and assign them to individual students or to rosters of students working on similar material. When a student logs on to his or her secure MySuccess account, the assignment appears and the student is able to take the online test.
- Teachers can access the data that accumulate over time. The results are reported in the context of grade-level expectations because the available items come from operational tests.
- The student can immediately see a score based on multiple-choice items. The score is updated when the teacher scores constructed-response items.

AIR has supported 18 administrations of the OGT. To date, AIR has

- implemented its Test Information Distribution Engine (TIDE) to keep district contact information current, allowed districts to upload student pre-ID files, assisted administrators in ordering test materials, and tracked shipments of test materials as efficiently as possible;
- developed, administered, and overseen the scoring of and reporting of more than 1.2 million subject tests for more than 250,000 students annually;
- developed special versions—English audio CDs, foreign language CDs, Braille and large-print test booklets, and oral translation scripts;
- applied more than seven million constructed-response scores per year;
- conducted and analyzed the results of embedded and independent field tests;
- developed operational and breach test forms for all subjects annually;

- created annual technical reports and provided support and documentation to all Technical Advisory, Test Steering, English as a Second Language (ESL), Students with Disabilities (SWD), Content, and Fairness committees; and
- implemented customized assessment score reports for families and educators including enhanced, full-color paper score reports and full electronic reporting, offering actionable data for families, teachers, principals, and superintendents.

During the past two years, AIR supported Ohio's transition from the traditional portfolio assessment for students with disabilities to implement the Alternate Assessment for Students with Significant Cognitive Disabilities (AASCD). The model allows the state to implement an alternate assessment that is as psychometrically sound as the assessments for the general population and also measures growth in individual students. The AASCD was also the first of Ohio's operational tests to include an online component. Test administrators were required to enter their student's scores into an online Data Entry Interface. AIR worked with ODE to employ a train-the-trainer model that reached nearly 10,000 test administrators, and the test was successfully administered to more than 16,000 students. Ohio's transition was completed this past spring (2013) following a standard setting workshop and the distribution of score report data and nearly 100,000 pages of paper reports based on the new alternate assessment model.

Similarity in Size and Complexity to Florida Standards Assessments

- Developed and successfully delivered grade-level and high-stakes high school graduation tests to more than 400,000 students in a dual-mode paper/pencil and online testing program.
- Developed more than 3,000 items in ELA, mathematics, and science (grades 5, 8, and high school). Science items include extensive use of simulation and machine-scored constructed response items.
- Prepared reports for Minnesota's Technical Advisory Committee and convened all required Content, Bias and Sensitivity, Rangefinding, Rubric Validation, Data Review, PLD, and Standard Setting meetings.
- Delivered comprehensive Technical Reports annually.

Project Description

AIR completed the second year of supporting the online and paper-and-pencil Minnesota Assessment System for approximately 500,000 students. AIR supported testing for the Minnesota Comprehensive Assessments (MCAs) in reading, mathematics, and science (grades 3–8, 10, and 11); Graduation-Required Assessments for Diploma (GRAD) in writing, reading, and mathematics; and alternate assessments (MCA-Modified and Minnesota Test of Academic Skills [MTAS]).

Upon award of this contract, AIR imported approximately 20,000 items (in various formats) from the previous contractor. For MCA Reading, AIR delivered both the paper-and-pencil census reading administration and the online independent field test. For the last year of these paper-and-pencil assessments, AIR created and administered multiple linked and equated forms to approximately 60,000 students at each grade level. For the online independent field-test, AIR deployed its field-test item-selection algorithm.

The algorithm employed by AIR's field-test engine ensures efficient samples for all items by treating districts and schools as strata and randomly selecting from among the least-administered passages/items within each stratum; averaging out position effects by randomly administering test items across test positions; and enabling more robust linkages among items, since each item is linked with every other item across hundreds of unique test forms to a degree not manageable through a set of fixed forms. AIR also administered the online MCA Math (offering up to three attempts for each student) and MCA Science. Both of these online assessments incorporate AIR's embedded field-testing engine for new items.

AIR created and administered multiple forms of the online MCA-Modified in reading and math and the paper-and-pencil MTAS. In addition to the initial administrations of the GRAD assessment for 60,000 students in grade 10, AIR offers monthly online retests for the Reading GRAD and the Mathematics GRAD. AIR also administers the Written Composition GRAD, which requires students to write an essay on paper in response to a prompt. The Written Composition GRAD is first given to students in grade 9; students who have not yet taken or passed the Written Composition GRAD may take the retest during the November, April (seniors only), and July administrations. AIR and MDE support this testing program with extensive online training for test administrators, incorporating animations and other interactive features.

Alabama High School Graduation Exam (AHSGE)

Contract Years: 1998–2001
2001–2004
2004–2007
2007–2010
2010–2015

Subject Areas and Grade Levels: Criterion-referenced, multiple-choice exam in Reading, Mathematics, Language, Social Studies, and Biology for high school students for grades 9–12.

Project Description

The Alabama High School Graduation Examination was designed to ensure that students receiving an Alabama high school diploma have a minimum comprehension of basic skills in Reading, Mathematics, English Language Arts, Social Studies, and Biology. There are four administrations per year; up to 200,000 students are assessed annually. The Alabama State Department of Education has contracted with DRC to provide testing services for this assessment, including project management, item development (since 2004), materials development, and printing, packaging and shipping, scoring, psychometric services, and reporting.

Alabama Reading and Mathematics Test+ (ARMT+)

Contract Years: 2009–2014

Subject Areas and Grade Levels: Criterion-referenced assessments comprising multiple-choice and constructed-response items in grades 3–8 for Reading and Mathematics (multiple-choice and constructed-response) and grades 5 and 7 for Science (multiple-choice only).

Project Description

The Alabama State Department of Education has contracted with DRC to develop, administer, and report on the Alabama Reading and Mathematics Test (ARMT+). These criterion-referenced assessments are administered to approximately 60,000 students per grade each year. Beginning in 2012, the previously developed Alabama Science assessment was administered under this contract along with the Reading and Mathematics tests. DRC is responsible for project management; item and test form development; publication and printing; packaging, distribution, and collection; processing and scanning; scoring, including handscoring; psychometric services; reporting; and customer service.

Alaska Comprehensive System of Student Assessment: Standards-Based Assessments (SBAs) and High School Graduation Qualifying Examination (HSGQE)

Contract Years: 2004–2009
(Science Assessments:
2005–2009)
2009–2016

Subject Areas and Grade Levels: Criterion-referenced tests based on Alaska standards in Reading, Writing, and Mathematics for students in grades 3–10 and high school; and in Science for students in grades 4, 8, and 10. Assessments include a balance of constructed-response and multiple-choice items.

Project Description

The Alaska Standards-Based Assessments (SBAs) measure the extent to which Alaskan students in grades 3–10 are attaining statewide student performance standards. The Alaska Science Assessments were implemented to measure student performance in Science and to meet the requirements of the No Child Left Behind (NCLB) legislation. The High School Graduation Qualifying Exam (HSGQE) is a high-stakes assessment that students must pass to receive high school diplomas. DRC has been contracted by the Department to develop and administer these tests, which are given to approximately 10,000 students in the spring and 6,000 students in the fall, per grade, across 54 districts and 514 schools. DRC's responsibilities include project management; item development and test construction; pilot and field testing; conducting review committee meetings; materials development and printing; packaging, distributing, and collecting test materials; scanning, editing, and scoring answer documents, including handscoring; standard setting; psychometric services; reporting; and data warehousing.

Idaho Standards Achievement Tests

Contract Years: 2006–2014

Subject Areas and Grade Levels: Criterion-referenced, multiple-choice tests in Reading, Language usage, and Mathematics for students in grades 3–10, and in Science for students in grades 5, 7, and 10.

Project Description

The Idaho State Department of Education has contracted with DRC to develop, administer, and report on the Idaho Standards Achievement Tests (ISAT). The assessments include only multiple-choice items and are primarily administered via computer two times per year (November/December and April/May). Approximately 150,000 students (600,000 actual tests completed) take the tests via computer annually, with a small number of tests administered via paper-and-pencil. DRC's duties include project management; item development and test construction; field testing; conducting review committee meetings; materials development and production; electronic administration and scoring of tests (performed by a subcontractor); printing and distributing a small number of testing materials; preparation of training materials; customer support; scanning, editing and scoring; psychometric services; and production and distribution of reports and parent brochures.

LOUISIANA

Louisiana Educational Assessment Program (LEAP), Graduation Exit Examination (GEE), Louisiana Alternate Assessments (LAA 1 and LAA 2), and English Language Development Assessment (ELDA)

Contract Years: 1998–2001 (LEAP and GEE)
2001–2005 (LEAP, GEE, and LAA 1)
2005–2011 (LEAP, GEE, LAA 1, LAA 2, and ELDA)
2011–2015 (LEAP, GEE, LAA 1, LAA 2, and ELDA)

Subject Areas and Grade Levels: Grades 4 and 8, along with high school. These criterion-referenced tests include multiple-choice and constructed-response items in English Language Arts (ELA), Mathematics, Science, and Social Studies.

Project Description

This program consists of standards-based tests for grades 4 and 8, along with a graduation exam, with approximately 60,000 students per grade taking the tests. The program also includes the Louisiana Alternate Assessments (LAA) for grades 3–11 and the English Language Development Assessment (ELDA) for K–12 students. DRC's responsibilities include project management; test construction; printing of all materials; writing and editing manuals, interpretive guides, and released items documents; conducting workshops for test coordinators; packing, distributing, and collecting materials; scanning, editing, and scoring answer documents, including handscoring; psychometric services; and reporting.
In addition, DRC recently developed items for use in transitional assessments and transitional assessment guides for Louisiana. These assessments will help the state transition to Common Core State Standards (CCSS) assessments and new assessments aligned to the Next Generation Science Standards, and new Social Studies Standards and Grade Level Expectations (GLEs) over the next three years.

Integrated Louisiana Educational Assessment Program (iLEAP): Augmented Norm-Referenced Tests and Criterion-Referenced Tests

Contract Years: 2003–2015

Subject Areas and Grade Levels: Augmented norm-referenced tests and criterion-referenced tests for grades 3, 5, 6, and 7 in ELA, Mathematics, Science, and Social Studies, and grade 9 in ELA and Mathematics. The assessments include both multiple-choice and constructed-response items.

Project Description

The iLEAP program consists of both augmented norm-referenced tests and criterion-referenced tests, which are composed of multiple-choice items, writing prompts, and Mathematics constructed-response items. Approximately 55,000 students per grade take the tests. DRC and our subcontractor, Riverside Publishing, are working together to develop and implement the iLEAP program. DRC's project activities include project management; item development (of Science and Social Studies items) and forms construction; conducting review committee meetings;

designing and printing scannable documents; packing, distributing, and collecting test materials; scanning, editing, and scoring answer documents, including handscoring; psychometric services; and reporting.

Louisiana Item Development for Science and Social Studies Assessments

Contract Years: 2013–2014

Subject Areas and Grade Levels: Grades 3–8 Science and Social Studies, and Biology

Project Description

DRC will produce Social Studies, Science, and Biology assessment guides and test items and related materials aligned to the new Louisiana Social Studies Standards and Grade Level Expectations and to the Next Generation Science Standards. DRC will develop 2,008 multiple-choice items and 58 extended-response item sets, along with item-specific scoring rubrics. DRC's responsibilities include project management, including schedule management; development of assessment guides; item development of multiple-choice and extended-response test questions with scoring rubrics; and item content/bias review meeting facilitation and logistics.

Michigan K–12 Item Development

Contract Years: 2011–2016

Subject Areas and Grade Levels: Grades K–12 in Mathematics, Reading, Writing, Science, and Social Studies; and English language proficiency in Reading, Writing, Listening, and Speaking.

Project Description

The Michigan Department of Education has contracted with DRC for the development, quality assurance, revision, and stakeholder review of assessment items and contexts for all subjects and tests included in the State of Michigan's K–12 statewide assessments. This includes criterion-referenced assessments in grades 3–9 and 11; alternate assessments; English language proficiency assessments; End-of-Course (EOC) assessments; and interim benchmark assessments. Item types include multiple-choice, short answer, extended-response, selected-response, activity based, performance task, technology-enhanced, and computer-based simulation tasks. DRC's responsibilities include project management; developing training methods and materials; recruiting, training, and performance evaluation of item/context writers and reviewers; planning, coordinating, and conducting all item/context development and review meetings; translation services; and reporting of procedures and results.

As of 2013, DRC's additional scope responsibilities include: development and review of Social Studies items for Michigan's alternate assessment, conducting an online pilot test and subsequent cognitive labs (spring 2014) for Michigan's alternate assessment in Social Studies (administered to students in grades 5, 8, and 11), and item development training for Michigan teachers to develop Mathematics and ELA items for the Smarter Balanced Assessment Consortium.

Michigan Interim Assessment

Contract Years: 2012–2014

Subject Areas and Grade Levels: Grades K–2 in Reading and Mathematics; grades 3–high school in Science and Social Studies; high school Reading and Mathematics.

Project Description

As a part of the item development contract, the Michigan Department of Education has contracted with DRC for the development and pilot testing of assessment items and contexts for the Michigan Interim Assessment program. This is a new online testing program; item types include multiple-choice and technology-enhanced items. DRC's responsibilities include project management; item/context development and forms construction; review committee meeting planning and facilitation; cognitive labs; administration of field tests; research/psychometric services; customer service; and technical support.

Michigan Administration, Scoring and Reporting of Statewide Assessments

Contract Years: 2013–2016

Subject Area and Grade Levels: Grades 3–11 ELA, Reading, Writing, Math, Science, and Social Studies

Project Description

DRC, AIR, Measurement Incorporated, and Measured Progress were selected for the administration, scoring, and reporting of Michigan's statewide assessments (given to 1.5 million students, across 3,500 schools). DRC's responsibilities include printing, packaging, and shipping of all test materials for Michigan's fall and spring assessments. Materials include: test booklets, answer documents, manuals, and accommodated materials (Braille, enlarged print, audio, video, and translations).

Nebraska State Accountability (NeSA) and Check 4 Learning (C4L)

Contract Years: 2009–2013 (NeSA–Writing, 2010–2013)
2014–2018

Subject Area and Grade Levels: Grades 3–8 and high school in Reading, Mathematics, Science, and Writing.

Project Description

The Nebraska Department of Education has contracted with DRC for the development and administration of the NeSA. Tests consist of multiple-choice items for Reading, Mathematics, and Science, as well as Writing prompts. Items are based on Nebraska academic content standards, with approximately 22,000 students tested per grade in the spring of each year. Operational tests with embedded field testing are primarily administered online via DRC's INSIGHTTM Online Learning System, with a small number of tests being administered in a paper-and-pencil format. Practice tests are delivered in online format only. In November 2013, DRC began administering the C4L formative assessments. The C4L system is used by teachers and administrators to deliver on-demand, classroom-based assessments at the point of instruction in order to monitor student learning throughout the year. DRC's responsibilities include project management; test development services; materials production, printing, distribution, and collection; computer-based test administration via our online testing engine, DRC INSIGHT; training; customer service; processing and scanning; scoring, including handscoring for NeSA-Writing; psychometric services; and reporting.

Oklahoma School Testing Program: Oklahoma Core Curriculum Tests (OCCT)

Contract Years: 2005–2010

Subject Area and Grade Levels: Criterion-referenced assessments in Reading, Writing, Mathematics, Science, Social Studies, Geography, and U.S. History/Constitution/ Government for students in grades 3–8.

Project Description

This program is an annual, statewide assessment administered to approximately 45,000 students per grade. DRC is under contract with the Oklahoma State Department of Education to provide ongoing development, implementation, and management of the program. DRC's project responsibilities include overall project management; item and test development; psychometric services; standard setting; printing of all test materials; packaging, distribution, and collection; scanning, scoring, and handscoring; reporting; in-state training; and customer service. With our computerized testing subcontractor, Computerized Assessments and Learning (CAL), we also provide online offerings, including operational assessments, practice tests, administrative setup, and online reports.

Pennsylvania System of School Assessment (PSSA)

Contract Years: 1992–1999
1999–2003
2003–2008
2008–2014

Subject Areas and Grade Levels: Criterion-referenced tests in Reading, Writing, Mathematics, and Science administered to students in grades 3–8.

Project Description

The Pennsylvania Department of Education has contracted with DRC to provide development, implementation, and management of the PSSA. These are standards-based, criterion-referenced assessments, consisting of open-ended, multiple-choice, and technology-enhanced items. Each year, approximately 150,000 students are tested per grade, and more than 1.6 million tests are administered. DRC's responsibilities include project management; customer service; item development and test construction; conducting review meetings; designing and printing materials; packaging, distribution, and collection; scanning and scoring all answer booklets, including handscoring; psychometric services; standard setting; rangefinding; and reporting.

Prior to January 2012, the contract included grade 11 (with retests for students in grade 12) and also included the PSSA–Modified test, which had modified achievement standards in Reading, Mathematics, and Science.

In spring 2013, DRC began delivering online versions of the PSSA through our online testing engine, DRC INSIGHT.

Pennsylvania Voluntary Model Curriculum, Classroom Diagnostic Tool, and Keystone Exams

Contract Years: 2009–2015

Project Description

The Pennsylvania Department of Education contracted with DRC for the development of the Voluntary Model Curriculum, Classroom Diagnostic Tool, and Keystone Exams. All three components are aligned to the Pennsylvania curriculum framework, the Pennsylvania Common Core Standards (PACC), and assessment anchors in the areas of Reading, Writing, Mathematics, Science, and Social Studies. Diagnostic tests are administered multiple times throughout the year. EOC tests are administered three times per. DRC provides online test administration for the Classroom Diagnostic Tool and Keystone Exams with our proprietary online testing system, DRC INSIGHTTM.

The Voluntary Model Curriculum consists of K–12 curricular resources and materials developed in collaboration with Pennsylvania teachers, administrators, and higher education faculty. Curricular resources include units and lesson plans as well as a variety of support materials. DRC's responsibilities include project management, curriculum development (learning progressions/units/lesson plans) aligned to PACC, development of enriched performance tasks, committee facilitation, meet-

ing planning and coordination, designing an online committee feedback system, and curriculum field testing.

The Classroom Diagnostic Tool is an online test system that supports the Keystone Exams by providing instructional feedback to students and teachers through criterion-referenced, multiple-choice, online computer-adaptive assessments of the prerequisite skills of students entering grades 3–12. Like the Keystone Exams, the assessments are modular in format, based on the same academic content, and consist of multiple-choice items (with real-time scoring). The system is available for use in schools and classrooms throughout the school year, and teachers can easily access online curricular resources directly from student and class reports. DRC is responsible for providing the following: project management; item development and item bank aligned to PACC; online administration with computer-adaptive testing algorithm; educator feedback system; field testing; materials production (print and online); customer service; scoring; psychometric services; data management; reporting; and professional development resources.

The Keystone Exams are a series of EOC summative assessments required for graduation (multiple-choice, constructed-response, and technology-enhanced) in Mathematics, Algebra I, Algebra II, Geometry, Literacy, Composition, Science, Biology, and Chemistry. Testing began for three of the courses in 2011 with rollout of the remaining six courses by 2015. The exams are offered in both online and paper-and-pencil format. Each test comprises three "modules" containing specific course-related content topics, permitting students who don't achieve proficiency to retake only the modules in which they were not successful. A student takes a Keystone Exam after completion of the appropriate course; the exam accounts for 30% of the student's final grade in the course. DRC's responsibilities include project management; item development aligned to PACC; forms construction; coordinating committee reviews; field testing; materials production and printing; packaging, distribution, collection, and processing; customer service; online test administration; scanning and scoring, including handscoring and automated scoring; psychometric services; standard setting; comparability study; data management; conducting report focus groups; and reporting.

SOUTH CAROLINA

South Carolina Department of Education
Office of Assessment
1429 Senate Street, Room 607
Columbia, SC 29201

South Carolina Palmetto Assessment of State Standards (SCPASS)

Contract Years: 2013–2018 (SCPASS)
2008–2013 (SCPASS)
1998–2008 (PACT)
1997–1998 (PACT Field Test)

Subject Areas and Grade Levels: Statewide, criterion-referenced assessments for a grades 3–8 assessment in Writing and grades 3–8 assessments in ELA, Mathematics, Science, and Social Studies (50,000 students per grade/subject annually).

Project Description

The South Carolina Department of Education has contracted with DRC to provide overall management and administration of the Palmetto Assessment of State Standards (SCPASS) for grades 3–8. The SCPASS includes both online and paper-and-pencil administration. DRC's responsibilities include project management; item development; materials production; packaging, distribution, and collection of test materials; customer service; coordinating and presenting workshops (in-state and via WebEx); online testing via the DRC INSIGHT test engine; scanning and scoring, including handscoring; psychometric services; and reporting. The SCPASS is administered in two parts to more than 50,000 students per grade/subject annually. The Writing assessment is administered in March, and the ELA, Mathematics, Science, and Social Studies assessments are administered each May. The writing test consists of an extended-response item and multiple-choice items. The remaining tests consist of multiple-choice items only. The SCPASS program replaced the PACT program.

High School Assessment Program (HSAP)

Contract Years: 2013–2018 (HSAP)
2008–2013 (HSAP)
2003–2005 (BSAP)
1998–2003 (BSAP)
1989–1998 (BSAP)

Subject Areas and Grade Levels: Statewide, criterion-referenced assessments (multiple-choice and constructed-response) for high school students in ELA and Mathematics. Approximately 90,000 students are tested per subject annually and administered three times per year.

Project Description

The South Carolina Department of Education has selected DRC as the contractor for the overall administration and management of the High School Assessment Program (HSAP). DRC's responsibilities include project management; materials production; packaging, distribution, and collection; customer service; coordinating and presenting workshops (in-state and via WebEx); scanning and scoring, including handscoring; psychometric services; and reporting. The HSAP is administered each fall, spring, and summer and includes tests in the content areas of ELA and Mathematics. The HSAP is the only state exit examination in South Carolina. Students first take the tests in the spring of their second year of high school. If a student does not pass, retesting continues each spring and fall. The ELA test consists of one extended-response writing item, two constructed-response reading items, and multiple-

choice items. The Mathematics test consists of three constructed-response items as well as multiple-choice items. The HSAP replaced the Basic Skills Assessment Program (BSAP), which was phased out in 2005 and tested approximately 23,000 students three times per year in Reading, Mathematics, and Writing. DRC was responsible for administering the BSAP from 1989–2005 and responsibilities included materials production; packaging, distribution, and collection; scanning and scoring, including handscoring; psychometric services; and reporting.

South Carolina English Language Development Assessment (ELDA)

Contract Years: 2012–2014 (with three one-year renewal contracts)
2008–2012
2007–2008
2006–2007

Subject Areas and Grade Levels: The ELDA consists of three tests designed to measure academic and social language proficiency in the domains of speaking, listening and reading, and writing. Approximately 45,000 students in grades K–12 are tested annually in the spring.

Project Description

The South Carolina Department of Education has contracted with DRC to provide overall management and administration of the ELDA, which is administered annually to all students in grades K–12. The tests consist of multiple-choice and constructed-response items. DRC's responsibilities include project management; producing test materials; customer service; coordinating and presenting workshops (in-state and via WebEx); printing, packaging, distributing, and collecting materials; image scanning and scoring, including handscoring; psychometric services; and reporting.

In 2012, DRC conducted an online pilot test via the DRC INSIGHT online testing system for grades 3–12 in grades and subjects.

South Carolina End-of-Course Examination Program (EOCEP)

Contract Years: 2012–2014 (with three one-year renewal contracts)
2008–2012

Subject Areas and Grade Levels: The EOCEP includes tests in English 1, Algebra 1/Mathematics for the Technologies 2, Biology, and U.S. History and Constitution.

Project Description

The South Carolina Department of Education has contracted with DRC to provide overall management and administration of the EOCEP, which is a high-stakes assessment administered to high school students in English 1, Algebra 1/Mathematics for the Technologies 2, Physical Science, Biology, and U.S. History and Constitution. More than 55,000 students per course are tested annually. The tests consist of multiple-choice items only and are administered three times per year using online or paper-and-pencil modes. Online test administration is done using our online testing system, DRC INSIGHT. DRC's responsibilities include project management; producing test materials; coordinating and presenting workshops (in-state and via WebEx); printing, packaging, distributing, and collecting materials; online test delivery; customer service; scanning and scoring; psychometric services; and reporting.

Washington Comprehensive Assessment Program (WCAP): Measurements of Student Progress (MSP), High School Proficiency Exam (HSPE), and End-of-Course (EOC) Tests

Contract Years: 2008–2015

Subject Areas and Grade Levels: The MSP (grades 3–8 Reading, Mathematics, Science, and Writing) and the HSPE (high school Reading and Writing) are criterion-referenced tests consisting of multiple-choice and constructed-response items. The EOC tests are currently based on the specific Mathematics courses of Algebra I, Integrated Mathematics 1, Geometry, and Integrated Mathematics 2; EOC tests in Biology were added for the first time in 2012.

Project Description

The MSP consists of standards-based tests for grades 3–8. The HSPE measures the proficiency of high school students and serves as the state's exit exam. Approximately 80,000 students per grade take the MSP and HSPE tests. DRC's contract also includes mandated EOC tests in Mathematics and Biology. DRC's responsibilities include project management; modifying items to include technology-enhanced features (MSP); typesetting and printing of all materials; writing and editing manuals; conducting workshops for test coordinators; packing, distributing, and collecting materials; scanning, editing, and scoring answer documents, including automated scoring and hand scoring with teacher scoring; and reporting results. DRC also provides online versions of the Reading and Mathematics tests for grades 3–8 and Science tests for grades 5 and 8 of the MSP via the DRC INSIGHT online testing system.

Assessment Services Supporting English Learners (ELs) Through Technology Systems (ASSETS)

Contract Years: 2011–2015

Project Description

The Wisconsin Department of Public Instruction and World-Class Instructional Design and Assessment (WIDA) were awarded a four-year Enhanced Assessment Grant by the U.S. Department of Education to develop a next generation assessment system for ELs. The project funded by the grant, known as Assessment Services Supporting ELs through Technology Systems (ASSETS), will develop an online assessment system that will measure student progress in attaining the English language skills they need to be successful in school, postsecondary studies, and work.

DRC was selected as WIDA's technology partner to provide online versions of the test via the DRC INSIGHT online testing system, beginning with field testing in January 2014. DRC will provide overall management of the test delivery system and customer support for schools and districts administering these assessments. The DRC eDIRECT portal will be used for student registration, and thousands of students in the WIDA Consortium's member states will be taking the field tests.

WIDA supports academic language development and academic achievement for linguistically diverse students through high quality standards, assessments, research, and professional development for educators. The WIDA Consortium includes 33 member states.

4.9 POOR PERFORMANCE NOTICE

In this section we present a list of issues AIR's clients have asked our assessment programs to rectify during the past seven years. In all cases, AIR worked closely with the client to remedy the situation. Across all projects, AIR has paid a total of $25,000 in liquidated damages during the past seven (7) years.

The contact information for these contracts is presented in the project descriptions earlier in this section of the proposal.

Contract	Purpose and Scope of Work	Issue/Concern/Date	Documentation/Resolution
Hawaii State Assessment	Statewide assessment project covering K–8 and high school assessments in ELA, Math, and Science	In fall 2008, AIR provided an incomplete missing materials list.	No formal notice of any kind was issued. AIR corrected the problem.
		In spring 2007, a scanning error occurred on student test booklets in Hawaii, caused by the malfunction of scoring subcontractor's electronic scanners. The error was uncovered by AIR in response to a query from a Hawaii test coordinator.	No formal notice of any kind was issued. See Appendix M (Item 1) for documentation. AIR terminated the subcontract and reprocessed all of the spring 2007 Reading and Math test booklets on AIR equipment to ensure the scanning errors were corrected. We also produced a new student-level data file with corrected scores and proficiency levels.
		In spring 2007, 400 grade 6 booklets shipped to one middle school were damaged. The booklets were all printed on the same machine at one of AIR's contracted print sites. The errors were reported by schools when they were getting ready to test or during testing.	No formal notice of any kind was issued. Replacements for the damaged testing materials were express delivered to the affected school.
New Mexico Alternate Performance Assessment	Alternate assessment project covering ELA and Math in four grade bands and Science in three grade bands	In 2009, student test data files contained miscodes for test completion status.	See Appendix M (Item 2) for the letter from the New Mexico State Department of Education (NMPED) related to this issue. AIR provided corrected data files and paid liquidated damages of $25,000.
		Pre-ID data were not merged into bio-update.	No formal notice of any kind was issued. No printed reports were affected, nor were Adequate Yearly Progress (AYP) results.

Contract	Purpose and Scope of Work	Issue/Concern/Date	Documentation/Resolution
Ohio Achievement Assessments	Statewide assessment project covering K–8 assessments in ELA, Math, and Science, English language proficiency, and alternate assessments for students with disabilities	2009 test included a released item.	No formal notice of any kind was issued. The released item was scored, and any student responses that were similar to the exemplars posted online were further analyzed.
Oregon Assessment of Knowledge and Skills	Statewide online assessment project delivering more than 2 million tests to more than 335,000 students	The spring 2008 Subcontractor's Online Test Delivery System failed to operate as specified.	No formal notice of any kind was issued. AIR terminated the subcontract for not meeting contractual requirements and installed AIR's Test Delivery System.
		In 2008, there was a delay in inserting field test items and a delay in the secure browser release for certain operating systems. In 2009, there was incorrect placement of one field-test item. In 2009, the nightly process of delivering student results data files from AIR's server to Oregon's server was incomplete. In 2010, there was an incomplete resolution of two help desk calls.	No formal notice of any kind was issued for any of these issues. All were resolved with normal project escalation procedures.
Delaware Comprehensive Assessment System	Statewide summative and interim assessments project in grades 2–10 in Reading, Mathematics, Science, and Social Studies.	In 2011, there was a one-day delay in the opening of the spring testing window and a two-hour delay in the opening of the End-of-Course (EOC) field tests.	See the letter from the Delaware Department of Education (DDOE) in Appendix M (Item 3), along with AIR's response (Item 4).
Minnesota Assessments	Statewide assessment project covering online and paper-and-pencil testing for approximately 500,000 students in Reading, Mathematics, Science, and alternate assessments	In 2013, there was online testing disruption. On April 16 and April 23, schools reported that students were experiencing long load times, and some students were logged out of tests unexpectedly during brief periods on the 16th. On both days, students were testing at all times during the day, and no student data were lost as proctors and students were able to use the functions to pause and resume tests as designed.	No formal notice of any kind was issued. Report issued by the Human Resources Research Organization (HumRRO) showed no widespread or consistently negative effects on student scores; it did not find evidence that the disruption impacted school scores. Report cited AIR system capability and the Minnesota Department of Education (MDE) policy allowing students to review items or pause or retake the test. Report can be found at http://www.education.state.mn.us/mde/schsup/testadmin/index.html.
		In 2013, there were management and communication issues.	See the documentation in Appendix M (Item 5).

7.1.0 Introduction

7.1.0 Introduction

Summary of Proposed Solution

Florida seeks Common Core tests that have been field-tested and are ready for operational administration by Spring 2015. Given the centrality of Florida's assessment program to the state's accountability system and approach to continuous improvement, the Department must have an assessment system in place that will serve these purposes. The assessment must measure the full breadth and depth of the Common Core State Standards, ensuring full and accurate measurement of the intended curriculum for each student.

Governor Scott has indicated that the assessment system must

- not significantly increase the testing time required;
- not significantly increase the cost of testing to states, districts, or schools;
- allow students to test as late in the school year as possible;
- meet the same high psychometric standards as the current assessments, including reliability and evidence of validity;
- provide a basis for comparing performance to other states; and
- require technology that can be supported without significant additional investment.

In addition, the ITN recognizes Florida's leading role in education across the nation, and anticipates continued policy innovation. Therefore, the state requires

- the ability to integrate custom, Florida-owned items in the test starting after the initial administration (we propose to integrate field-test items even in the first year) without breaking trend lines;
- the ability to review items even in the first year to ensure that they meet Florida community expectations and cohere with community standards; and
- innovative, thoughtful use of technology to measure the important skills and knowledge embodied in the standards in deeper ways without imposing additional barriers to accessibility.

Here we outline a solution, described in detail throughout the rest of this proposal, that meets all of these requirements. Our proposed solution offers Florida two different options for the baseline, first-year test, with the two options differentiated by cost, testing time, and the types of measurement used. Both options offer flexibility for the test to evolve at Florida's discretion over time.

Both of the options are being field-tested this spring, and each will field test an extensive item bank, from which Florida can select forms. Each of the options is being field-tested using AIR's online test delivery system, which

- can scale to serve as many simultaneous users as necessary;
- works with the technology currently found within schools, supporting much lower minimum requirements than identified in the ITN; and
- offers the broadest range of operational item types and accommodations in the industry.

The two options for the baseline, first-year test include:

1. The Student Assessment of Growth and Excellence (SAGE)
2. The Smarter Balanced Assessment (Smarter Balanced)

SAGE was developed in partnership with the state of Utah to measure the full breadth and depth of the Common Core State Standards. Smarter Balanced was developed by the Smarter Balanced Assessment Consortium. Both item banks were designed to support adaptive assessments, and therefore offer broad and robust pools from which to select fixed forms. The two options differ in cost, testing, and turnaround time and both will be fully field-tested and calibrated this spring. The terms of use of these tests allow Florida to enhance them with Florida items, to modify the blueprints even in the first year, and to select fixed-form tests.

The SAGE item bank is made up of approximately 300–400 items per grade and subject. In its adaptive form, SAGE mathematics takes approximately 90 minutes to administer and the ELA assessment takes approximately 150 minutes (elementary) to 180 minutes (secondary) to administer, including the writing assessment. SAGE ELA measures Common Core reading, writing, language, and listening. The SAGE assessment is predominantly machine scored, with a proportion of the automated scores on the writing assessment reviewed by human scorers. Should Florida adopt this model, AIR will recommend that any high-stakes use of the writing assessment be based on human scores rather than machine scores.

Smarter Balanced is targeting an item bank of approximately 1,000 items per grade/subject. The Smarter Balanced assessment consists of an adaptive assessment and a performance task in each subject. The performance task is preceded by a non-secure classroom activity in advance of the performance task administration. Excluding the classroom activity, the Smarter Balanced math test is designed to take approximately three hours to administer, and the Smarter Balanced ELA test will take approximately three and a half hours to administer. Like SAGE, the Smarter Balanced ELA test will measure reading, writing, language, and listening. The Smarter Balanced Assessment Consortium includes 26 states, 23 of which will participate in the field test in spring 2014. The final calibrations will result from the field test, establishing a scale on which comparisons can be made to the participating states. The Smarter Balanced Assessment performance tasks are mostly human scored, and the remainder of the test is mostly machine scored, although the non-performance task portion of the test includes up to three human-scored items per subject.

Both options offer Florida the required flexibility. Either assessment can be administered as-is (as an adaptive assessment), or exploited as a fully field-tested and calibrated Common Core item pool. If the assessment is treated as an item pool, Florida can design its own blueprints and select items from the pools to support creating FSA fixed forms.

Based on cost, testing time, and turnaround time, Florida may want to take SAGE as the base from which to build. During the first year items from Smarter Balanced can be integrated with SAGE to establish the linkage that will support cross-state comparisons. Similarly, if PARCC items exist, the terms of the PARCC grant require that they be available to states like Florida, and a similar linkage can be established. Alternatively, Florida may choose to license the Smarter Balanced item bank from which to build FSA forms. We note that the SAGE test has been accepted by the state of Ohio as a backup plan in case PARCC is not ready in time, so SAGE may provide direct comparisons to Ohio and Utah, with other comparisons accomplished through linking studies.

Exhibit 7.1.0-1 summarizes these two options, and how they meet the key objectives articulated by Governor Scott and elaborated in the ITN.

Exhibit 7.1.0-1: Summary of Options and How They Meet Florida's Objectives

Objective	Smarter Balanced	SAGE
Timely and informative results	Performance tasks may be administered earlier, with primarily computer-scored portion administered later. The item bank covers full depth and breadth of content.	Primarily machine scored allowing rapid turnaround of online grades. Robust item bank covers full depth and breadth of content.
Costs in line with current assessments	Slightly more.	Less than or equal.
Similar testing time to current assessments	Approximately 7–8 hours including both subjects.	Approximately 4 hours including both subjects.
Summative assessments as close as possible to the end of the year	Rapid turnaround for online grades allows later testing while meeting timelines.	Rapid turnaround for online grades allows later testing while meeting timelines.
Student mastery of the standards taught, including inter-state comparisons	Direct comparisons to Smarter Balanced states.	Comparisons to Smarter Balanced and (potentially) PARCC states through linking study. Direct comparisons to Utah and potentially Ohio.
Test quality as rigorous as current assessment	Test design supports validity and reliability comparable to current FCAT 2.0.	Test design supports validity and reliability comparable to current FCAT 2.0.
Results that can be used for Florida's accountability system	Assessment provides a criterion-based assessment of the Common Core State Standards and offers a vertical (developmental) scale as well as an on-grade scale.	Assessment provides a criterion-based assessment of the Common Core State Standards and offers a vertical (developmental) scale as well as an on-grade scale.
Requires technology within required parameters, including accommodations	Delivered with AIR's systems, imposes far less demanding technology requirements than set forth in the ITN.	Delivered with AIR's systems, imposes far less demanding technology requirements than set forth in the ITN.
Allows incorporation of Florida-created content	Florida can use the items along with items created for and field-tested in Florida.	Florida can use the items along with items created for and field-tested in Florida.
Responsive evolution in Florida's accountability system	License to use items allows FSA to diverge from the Consortium assessment over time.	License to use items allows FSA to diverge from the SAGE assessment over time.
Responsive to Florida community sensitivities	Large item bank offers opportunity for Florida community review to eliminate inappropriate items without sacrificing coverage of the pool.	Large item bank offers opportunity for Florida community review to eliminate inappropriate items without sacrificing coverage of the pool.
Innovative, thoughtful use of technology	Item specifications designed to use technology to elicit deeper measurement while maintaining accessibility.	Item specifications designed to use technology to elicit deeper measurement while maintaining accessibility.

Policy Drives FSA Requirements

For the past decade, Florida has been nationally recognized as a pioneer in innovative education reform that has led to unprecedented improvements in student achievement. This is demonstrated by improved National Assessment of Educational Progress (NAEP) scores, a closing of the achievement gap, and increased graduation rates. Florida has experienced success in implementing major accountability reforms for schools and districts, with the A to F grading system; for students, with statewide third-grade progression requirements and high school graduation standards; and for

teachers and administrators with educator evaluation based on student outcomes. Even the accreditation standards for teacher preparation institutions now include components to account for the effectiveness of new educators based on their effectiveness in improving student outcomes. Each of these education reforms depends on fair, accurate, and transparent measures of student achievement. Continuity of the reforms depends entirely on the integrity and success of the underlying assessments and data.

Below, we summarize some key policies that the FSA will be called on to support. These policies drive both the timelines and characteristics of the assessment. In preparing this proposal, this policy review provided the touchstone for our technical recommendations and timelines.

School Grades and Federal Accountability

A to F school grades provide transparent, objective, and easily understood data to parents, educators, and the public to spur improvement among all schools. Being able to measure student proficiency and learning growth measures aimed at meeting a standard are critical components of school grading. Being able to measure growth during the first year of the assessment transition is important for half of the school grading components that focus on growth in reading and math. Florida currently has a federal waiver from the requirements of Adequate Yearly Progress (AYP) as described under the Elementary and Secondary Education Act for which school grades are substituted for AYP designations.

Ensuring that there is baseline data to measure growth in 2014–2015 is critical to A to F school grading. AIR recognizes it is the desire of the Department to have grades for the 2014–2015 school year released in the late fall 2015. As a result, standard setting will occur over the summer for proficiency standards and determining achievement levels. Growth computations will need to be made during the same timeframe to ensure a year's worth of progress in a year's time is measurable from the FCAT to the new assessment for inclusion in school grading.

Grade 3 Reading Guarantee

Florida has placed a command focus on reading in the primary grades (K–3), and research has repeatedly confirmed the critical importance of developing literacy skills in those years (Musen, 2010; National Institute for Literacy, 2009; Strickland & Riley-Ayers, 2006). Reading is the foundation of learning. When you can read, you can learn. In 2001, 29% of Florida's grade 3 students were performing at the lowest achievement level on FCAT reading. In 2002, Florida began requiring retention for students who performed in the lowest achievement level at the end of grade 3. This policy, along with the other investments that Florida made in early reading, paid dividends: by 2013, only 18% of grade 3 students fell into that lowest category.

The grade 3 reading guarantee imposes both timeline and technical demands on the assessment. Parents and educators need time to respond to the grade 3 reading results. The reporting deadline has historically been mid-to-late May. First, the reading guarantee imposes at least two technical requirements. First, the ELA assessment must provide a reliable reading score. Second, the cut-score between the lowest level and the next level must accurately and fairly classify students whose reading puts them at sufficiently increased risk to warrant retention.

The use of the reading test for matriculation into grade 4 requires an achievement standard that has been explicitly set for this purpose,

and requires evidence of the validity of the judgment. This poses a particular challenge for the 2014–2015 school year. We have proposed a standard setting plan and validation plan that will support this use even in the first year of implementation.

High School Graduation

State policy has required a high school exit exam since the 1970s. Over time, Florida has made the exam more rigorous, which made the diploma more meaningful. Before 2002, students had to pass a grade 8 minimum skills test to earn a diploma.

In 2002, Florida raised the rigor of the exam from a grade 8 to a grade 10 competency-based exam. Rising to meet expectations, more students are actually passing the tougher test. When expectations rise, students and teachers rise to meet – and often exceed – them.

As Florida transitions to the FSA, the assessment must prove a sufficiently rigorous measure of the Common Core State Standards (CCSS) that a high school diploma is meaningful to graduates, employers, and postsecondary institutions. Potential graduates will need assessment results before the end of the school year and the results must be reflective of 21st century skills.

While the standards established by others for Smarter Balanced or SAGE will be designed to represent career and college readiness, Florida may want to evaluate those standards for themselves and potentially establish independent standards.

Teacher Evaluation

Beginning in school year 2011–2012 for reading/language arts and math teachers (and school year 2014–2015 for all teachers), at least 50 percent of a teacher's evaluation must be based on student learning growth assessed annually and measured by statewide assessments or, for subjects not measured by statewide assessments, by district assessments (per section 1008.22[8], Florida Statutes). The Department contracted with the American Institutes for Research (AIR) to assist in the development, evaluation, and implementation of a value-added model (VAM) to be used for teacher evaluation. The goal of the project is to provide a fair, accurate, and transparent measure of teacher effectiveness that districts can incorporate into their teacher evaluation systems to bring about educational improvement and to provide information about student learning to individual teachers, principals, and other stakeholders.

AIR remains committed to working in partnership with the Department and the Student Growth Implementation Committee (SGIC), using a collaborative and iterative process during the assessment transition to develop, analyze, and implement value-added measures of student academic performance in Florida public schools at grade levels K–12 and ensure the design is not adversely impacted by the transition to new statewide student assessments.

The NGSS adopted in 2007 and tested on the FCAT 2.0 predate the CCSS but reflect an attempt to increase the rigor of the standards that they replaced. It appears that these standards were a step in the same direction as the CCSS. This is important because a true growth measure must reflect growth along a common dimension. When the prior-year score measures a different construct than the current year score in a value-added model, biases likely arise. As the Department saw when trying to implement value-added models for End-of-Course (EOC) tests, a pre-test measuring a different construct resulted in attenuated relationships between pre-tests and post-tests. This attenuation leads to the value-added measure representing a sort of compromise

between a growth measure and a status measure, and is likely to favor teachers of higher-performing students, which does not serve the goal of improving education for all of Florida's students.

From the perspective of comparability over time, the transition to the FSA faces the same challenges faced when Florida transitioned from the FCAT 1.0 to the FCAT 2.0. In that transition the skills measured appeared sufficiently similar to support the value-added analysis.

Charter School Reporting and Agreements

Charter schools are public schools of choice. They are very popular and among the fastest growing school choice options in Florida. Charter schools are largely free to innovate, and often provide more effective programs and choice to diverse groups of students. Since 1996, the number of charter schools in Florida has grown to more than 578 schools in 46 districts in 2012–2013. Charter school student enrollment now exceeds 200,000 students.

Section 1002.33(23), Florida Statutes, requires the Florida Department of Education to prepare an annual statewide analysis of student achievement in charter schools versus the achievement of comparable students in traditional public schools. The analysis examines the average performance of charter school students and traditional public school students using state assessment data from the FCAT 2.0 Reading, Math, and Science, and the Algebra EOC exams and is due to the legislature upon completion.

The governing body of the charter school is required to report its progress annually to its sponsor, and subsequently to the Commissioner of Education per Section 1002.33(9)(k), Florida Statutes. The Department has developed a uniform, online annual accountability report to be completed by charter schools that is pre-populated with student assessment data. Charter schools are subject to the same accountability requirements as other public schools, including reports of student achievement information that links baseline student data to the school's performance projections identified in the charter. The deadline for schools to submit the 2012–2013 Charter School Annual Accountability Report online was November 1, 2013. The deadline for final submission by districts is January 31, 2014.

In addition, charter schools sponsors may have additional reporting and accountability requirements as designed by the district.

Teacher Preparation Program Approval

The teacher preparation program approval process requires that each teacher preparation program go through an initial approval process first based on the institution's documented ability to deliver a competency-based program. Once initial approval is received, the institution must submit an annual report based on the candidate's performance within their program and during the candidate's first year of teaching.

Programs undergo a continued approval process through annual reports submitted to the Department and site visit reviews completed at the institution every seven years. Currently, 36 colleges and universities in Florida have state-approved initial teacher preparation programs.

The Department continues to review and revise recommendations for improvements to teacher preparation programs. Recommendations made by the Race to the Top Teacher Leader Preparation Implementation Committee (TLPIC) are the foundation and a framework

for improvement of programs, as well as our teacher workforce and ultimately our Pre-K–12 students. The TLPIC incorporates value-added model data and student achievement data in reading and math by subgroup into the program review and approval requirements.

Summary of Policy-Driven Technical and Timeline Requirements

The preceding discussion highlighted some of the key demands that Florida's educational policy will make on the FSA. Exhibit 7.1.0-2 summarizes the technical requirements imposed by the uses to which the data will be put, and the implied timelines.

As we see from Exhibit 7.1.0-2, the policy demands to be placed on the FSA impose the following technical requirements:

- A reliable developmental (vertical) scale
- Linkage to the FCAT 2.0
- Evidence of the strong correlation between the trait measured by the FCAT 2.0 and the FSA
- A reliable separate score for Grade 3 reading
- Performance standards for Grade 3 reading (at least) before May 2015
- Evidence of the validity of the inference that grade 3 students in the lowest per-

Exhibit 7.1.0-2: Dates and Requirements Driven by Policies Relying on FCAT

Program/policy	Requirements to serve policy	Approximate annual reporting date	Implied date for final results
School grades	1. A vertical scale to support the growth component of the school grades measure. 2. A strong linkage to the FCAT 2.0 to support the growth measure in 2014–2015.	June 15	
Grade 3 promotion	1. The Grade 3 ELA test must provide for a separate reading score. 2. Timely performance standards established to support the retention decision. 3. Evidence of the validity of the inference that performance in the lowest FSA performance level indicates increased likelihood of lower longer-term performance across subjects.	Before May 23	May 15
High school graduation	1. Evidence of the validity of the inference that students achieving the proficient standard are college/career ready and do not need remediation in postsecondary institutions or are able to obtain livable wage employment.	Before May 14	May 1
Teacher evaluation	1. Strong alignment between the Common Core traits measured by the FCAT 2.0 and the FSA. 2. Evidence of the FCAT 2.0–FSA alignment.	July 31	Summer 2015
Charter school reporting and agreements	Same as other public schools, so all of the above.	Depends on charter renewal date, no later than November	
Teacher preparation accreditation	1. Strong correlation between the traits measured by the FCAT 2.0 and the FSA. 2. Evidence of the FCAT 2.0–FSA correlation	Fall/winter	

formance level are at increased risk of longer-term failure

- Evidence of the validity of the inference that examinees meeting the high school proficient standard are career and college ready

Our proposed plan meets all of these requirements, and does so on a more favorable timeline than required in the ITN. Below, we provide a brief summary of the technical plan.

Preview of Proposed Plan

AIR has crafted a plan that meets these deadlines and requirements and at the same time, we are able to push most of the testing windows as late as April 1 in the first year. As described in the previous section, the foundation of the plan begins with the item bank available from Smarter Balanced or SAGE. AIR will work with Florida to select fixed forms from these item banks or, for online grades and at the Department's discretion, select item pools for use in an adaptive test (with a paper fixed form offered as an accommodation).

Throughout this proposal, readers will see where these policy uses guide our proposed technical approach. In particular, we propose a plan to meet the following technical requirements:

- *A reliable developmental (vertical) scale.* Both Smarter Balanced and SAGE are developing a vertical scale during their field tests this spring. Using AIR technology, these vertical scales will be based on much larger and more robust linking sets than is typically achievable in fixed-form assessments, providing for a more reliable, robust vertical scale.
- *Linkage to the FCAT 2.0.* In Section 7.6.3.6 we propose a plan to link the FSA to the FCAT 2.0.
- *Evidence of the strong correlation between the trait measured by the FCAT 2.0 and the FSA.* In Section 7.6.3.6 we propose a validity study that yields accurate estimates of the correlation between the latent traits.
- *A reliable separate score for grade 3 reading.* Both the Smarter Balanced and SAGE banks will yield reliable scores for reading.
- *Performance standards for grade 3 reading (at least) before May 2015.* Although data from Florida will not necessarily be available, we propose a standard setting plan that will enable Florida to establish standards based on data representative of other states and national and international benchmarks in fall 2014.
- *Evidence of the validity of the inference that grade 3 students in the lowest performance level are at increased risk of longer-term failure.* By definition, this evidence must arise over time because it is about longer-term outcomes. If Florida adopts the SAGE assessment as a foundation for the FSA, Utah is interested in a study comparing the longer-term outcome of low-performing third graders in Utah (where the retention policy is not in place) with those of low-performing Florida grade 3 students (where the retention policy is in place). This study, described in Section 7.6.3.6, will provide empirical evidence supporting the validity of this use of the assessment.
- *Evidence of the validity of the inference that examinees meeting the high school proficient standard are career and college ready.* Utah is planning a study to be conducted in spring 2014 to compare the performance on high school SAGE of college freshmen in remediation with those of college freshmen in standard courses. Discrimination between the groups will support inferences about career and college

readiness, as well as provide input to the standard setting in the form of the score that best discriminates between the groups.

Our plan meets the timeline requirements as well, and offers Florida the option of pushing most testing dates back to allow almost a month of additional instruction. We propose online assessments that are entirely machine-scored. As you will see, these assessments include many constructed-response items (for example, math tests where students respond with sets of equations or drawings) that can be scored with near-perfect reliability and validity. When administered on paper, these items are hand-scored; however, the limited number of grade/subjects that are administered on paper enable us to complete the hand-scoring quickly, with the exception of the ELA performance tasks, which will require more hand-scoring.

To meet these deadlines, we propose that

- the ELA performance tasks be administered in early March, consistent with the testing window in the ITN;
- the remainder of the tests be administered during a 12-day window starting approximately April 1, allowing nearly an additional month of instruction before assessment; and
- the grade 3 reading assessment (which must be processed much more quickly) be entirely machine-scorable.

In addition, we have proposed a logistical process that eliminates the need for extensive cleanup at the end of the testing window. We propose a real-time-ID process in which newly arriving students can be entered into our registration system, which will print ID labels identical to the pre-ID labels in real time. This process augments, rather than replaces, the pre-ID process. It avoids the errors associated with hand-gridding information on answer documents and enforces a wide variety of data integrity checks. By introducing the information into the system before testing, rather than after scanning, the process will allow Florida to clean up the demographic data while testing is still taking place.

We are confident that our proposed plan will enable Florida to continue its impressive educational reform and improvement policies uninterrupted.

7.1.1 Notice to Respondents

AIR acknowledges each of the nine paragraphs in the notice to respondents.

This proposal refines requirements mentioned in Paragraph 4. AIR proposes to use pre-existing proprietary software to deliver this program. We are willing to license the software to Florida after the duration of the contract for a price to be negotiated. However, our system is compatible with the open-source Smarter Balanced online system that will be released into open source next year. While the capabilities of our proprietary system exceed the open-source system and the architecture is different, the items can be delivered using the open-source system. Our base proposal is that Florida adopt the open-source system for future reference, although it will need some architectural changes to scale to the required capacity.

We note that Smarter Balanced is in the process of publishing interoperability standards, which we are developing in partnership with them. We can deliver Florida items in an interoperable format that conforms to those standards.

The base tests proposed here, SAGE or Smarter Balanced, remain the property of their owners. Use of those items beyond the contract period will require Florida to negoti-

ate with the item owners. However, the base plan will deliver enough Florida-owned items to replace the foundation item bank before the end of the contract period.

7.1.2 Project Schedule

As required by the ITN, we present AIR's staffing plan in Section 7.7.2. This plan includes detailed descriptions of the roles and qualifications of our proposed staff along with estimated FTE for lead staff and overall activities.

The attached sample project schedule, at the end of this section, lists the major deliverables and tasks as required by the Department. In addition, many tasks and processes, internal to AIR, have been detailed. These tasks and processes support the major deliverables, ensuring that all stakeholders are kept apprised of the overall project status. The AIR program team will be responsible for maintaining the project schedule; milestones and deliverables will be discussed during the weekly status meetings.

Some highlights of the schedule include the following:

- Meeting all of Florida's reporting deadlines, with Florida standards, in 2014–2015
- Delivering 2014–2015 test forms built in collaboration with Florida
- Scheduling of meetings with Florida educators and stakeholders
- Listing of proposed testing windows for 2014–2015
- Delivering results in accordance with Florida's requirements
- Listing of supporting tasks and processes for meeting major schedule deliverables

The table on the next page provides an easy one-page reference to the key post-administration milestones for scoring and reporting student results.

7.2.0 Program Descriptions

7.2.0 Program Descriptions

In the following sections, AIR presents our proposal to provide Florida with a criterion-referenced achievement test aligned to and measuring mastery of Florida Standards in English Language Arts/Literacy (ELA/L) and Mathematics proficiency. In our response, we detail our approach to each requirement of the ITN and offer innovative solutions for assessment, scoring, reporting, and psychometric studies.

We recognize the following purposes and objectives of the assessment:

1. Assess the achievement level and annual learning gains of each student in ELA/L and Mathematics
2. Provide data for making decisions regarding school accountability, recognition, and improvement of operations and management, including schools operating for the purpose of providing educational services to youth in Department of Juvenile Justice programs
3. Identify the educational strengths and needs of students and the readiness of students to be promoted to the next grade level, to graduate from high school, and to succeed in college and in careers
4. Assess how well educational goals and curricular standards are met at the school, district, and state level, and at the national level, to the extent possible

The preceding section describes additional uses of the FSA based on existing Florida policy, and how our proposed plans will meet those requirements.

7.2.1 Expected Number of Districts, Schools, and Students

We have prepared this proposal to include the numbers of districts, schools, and students identified in Appendix C of the ITN. This translates into specific materials lists and hand-scoring quantities, which we document in Appendix B.

We recognize that the number of administration sites will increase by a projected 5 percent per year.

7.2.2 Potential Test Administration Dates

Our project schedule presented in Section 7.1.2 presents proposed test windows for 2014–2015. As described earlier, we propose a modified logistical plan that enables us to move the demographic cleanup period to coincide with the testing window, shortening timelines for the main data delivery by weeks. Exhibit 7.1.0-2, presented earlier, presents approximate delivery dates required by Florida's existing policies, and we are able to meet those dates with the following administration schedule:

- The ELA performance tasks will be administered in early March, consistent with the testing window in the RFP.
- The remainder of the tests will be administered during a 12-day window starting approximately April 1, allowing nearly an additional month of instruction before assessment.
- The grade 3 reading assessment, which must be processed much more quickly, will be entirely machine-scorable.

We note that for reading and mathematics, this allows nearly an additional month of instruction before testing. As more grades move online, these dates can be pushed further back toward the end of the year.

7.3.0 Test Design and Development

7.3.0 Test Design and Development

In 2010, Florida adopted the Common Core State Standards (CCSS) in English Language Arts/Literacy (ELA/L) and Mathematics. Florida seeks an assessment that will provide an accurate and meaningful measurement of student mastery in those standards without significantly increasing the testing time beyond that of the current state assessments.

AIR proposes to provide a statewide assessment system that will not only measure student achievement of Florida's standards but do so with a delivery system that works within the existing infrastructure in Florida and which offers accessibility features that will make the test accessible to virtually every student in the state. AIR has led the industry in the development of online assessments that provide efficient, accurate, and meaningful results to stakeholders. We are proud of the partnerships we have forged with our state clients. These collaborative relationships, along with our own research and development, have afforded us opportunities to continue improving the design of our assessments.

As described in the introduction, we offer the Department an assessment based on one of two complete and robust item banks—one drawn from the Student Assessment of Growth and Excellence (SAGE) and the other developed by the Smarter Balanced Assessment Consortium. Each of these item banks was developed to support an adaptive assessment, which means that each bank is designed to cover the range of expected achievement in each grade and contains many items. Florida has the option of delivering either of these assessments in its adaptive form or drawing upon the robust banks to construct fixed forms.

In either case, we understand that it is Florida's intent to develop items throughout this contract, embedding them for field testing. In all likelihood, these items will cause the FSA to diverge from the base test over time. Hence, in either case, the comparison to other states would likely be through a linkage to other states.

Whether the Department chooses to begin with the SAGE item bank or the Smarter Balanced item bank, we recommend that the FSA be linked to the Smarter Balanced scale to facilitate cross-state comparisons. If the FSA begins with the Smarter Balanced assessment, the linkage will occur naturally. If the FSA begins with SAGE, the Department can license the Smarter Balanced bank for a small number of students (approximately 3,000–4,000 per grade) and intersperse a small number (approximately 6–8) of items per students in embedded field-test slots to link to the Smarter Balanced scale.

Substantial public information is available on the Smarter Balanced assessment. That assessment is somewhat more expensive to license and includes more hand scoring (hence, requiring longer timelines and imposing higher costs) than the SAGE. Therefore, this section focuses more on the SAGE assessment, though we encourage the department to consider administering the Smarter Balanced assessment.

SAGE item banks comprise approximately 300–500 items per grade in both ELA/L and Mathematics, respectively. These item banks represent the full suite of online item types AIR offers, including our innovative machine-scored constructed-response (MSCR) items.

The SAGE ELA/L assessment is designed to take approximately 90 minutes, which is significantly shorter than the 160-minute testing time proposed in Appendix D of the ITN. The test comprises Reading, Listening, and Language items, which assess the full range of content standards in the Common Core. The Reading portion contains both single and paired passages, with a range of informational

and literary genres that reflect the ratio established by the Common Core (i.e., progressively more informational passages in the upper grades). Listening items are based on short auditory stimuli. Editing items give students the opportunity to edit short draft passages by correcting errors in context.

Additionally, SAGE offers a writing component, based on two extended writing prompts. The writing portion of the test is designed to take approximately 60 minutes at the lower grades and 90 minutes at the upper grades. Consistent with Common Core's evidence-based approach to writing, the SAGE writing test provides students with a series of short stimuli around a common theme or topic. These are used as a springboard for an authentic writing performance task. The testing times ensure that students have enough time to read the stimuli and craft a response that incorporates their research into their reasoning.

The SAGE Mathematics assessment is estimated to require less than 90 minutes. Like ELA/L tests, Mathematics tests are not administered in "sessions," but they can be segmented to allow students to access calculators only in designated portions of the test.

SAGE Mathematics tests assess the breadth and depth of the CCSS. Just as the CCSS align across grades to form a coherent progression of skills, so do the blueprints of the tests at each grade, which represent an evolving hierarchy of mathematical skills. Each Mathematics assessment also presents students with a range of cognitively demanding items (i.e., the depth of knowledge taxonomy) as well as a variety of response mechanisms. In fact, at least 20% of the items on each online Mathematics assessment are MSCR items.

The SAGE requires 90 minutes or less for each grade and subject (ELA/L comprises two subjects—Reading and Writing) to administer the SAGE in its adaptive form. Hence, across ELA/L and Mathematics, the entire battery of tests takes approximately 270 minutes, or approximately 4.5 hours. This compares favorably to either consortium assessment, as well as the current Florida Comprehensive Assessment Test® 2.0 (FCAT 2.0). A fixed-form version would require somewhat longer assessments to cover the expected range of performance. In no case would the ELA/L and Mathematics assessment require more testing time than Florida currently requires.

We note that it is possible for Florida to participate in the SAGE field test this year (spring 2014) and embed Florida-specific items in embedded field-test slots next year (spring 2015).

Whatever solution Florida chooses for a first-year item bank, AIR will work closely with the Department to ensure that items are acceptable to both the Department as well as Florida's stakeholders. We will hold item review meetings in advance of the field test so the Department, educators, and community members can review and approve each test item before it is presented to Florida's students.

In the next section we provide a detailed description of the SAGE assessments and how they meet Florida's requirements. Section 7.3.3 describes AIR's structured item-development process and introduces some of the tools available to our test developers to create open-ended, machine-scored items that measure deep knowledge while reducing costs and speeding reporting.

7.3.1 Test Content

Our proposal offers Florida the choice between two exceptional Common Core tests, with a plan to link either to the Smarter Balanced scale. The Smarter Balanced test specifications are public and well publicized, so here we

focus on describing the SAGE test content. We do so first for ELA/L, then for Mathematics.

ELA/L Test Content

Overview of the Next Generation Sunshine State Standards in English Language Arts/Literacy

In July of 2010, the Florida State Board of Education adopted new standards in the English language arts to place emphasis on coherence, focus, and rigor for all grades.

These standards, the Next Generation Sunshine State Standards (Common Core), represent significant shifts in Florida's approach to language arts content, which now emphasizes

- building knowledge through content-rich nonfiction;
- reading, writing, and speaking grounded in evidence from text, both literary and informational; and
- regular practice with complex text and its academic language.

The Common Core's College and Career Readiness Standards are divided into four strands, or disciplines: Reading, Writing, Speaking/Listening, and Language.

In Reading, the strands are organized into sub-strands, which include Reading Literature, Reading Informational Text, and Reading Foundations. Within each sub-strand is a skill domain, which defines the focus of content within each strand. In Reading Literature and Reading Informational text, the skill domains are

- Key Ideas and Details;
- Craft and Structure; and
- Integration of Knowledge and Ideas.

Within each skill domain are standard statements, which define specifically what students should know and be able to do at each grade level.

The Common Core Writing standards define the types of texts students should be able to produce. These standards require that students

- write arguments or opinion pieces and provide support;
- write informative/explanatory texts to examine a topic; and
- write narratives to develop real or imagined experiences or events.

At each grade band, these standards become more complex. In kindergarten through grade 5, there is an expectation that students will demonstrate an increasingly sophisticated use of language and syntax as well as a more coherent organization of ideas. Additionally, writing should be based on more demanding content sources. In grades 6 through 12, students should show an increased sophistication in all aspects of language use, including vocabulary structure. Students should be able interact with, and respond to, increasingly complex texts as they formulate their ideas in the upper grades.

The Common Core Listening standards require that students comprehend the main idea and supporting details of a text that is read aloud or presented in diverse media formats. As students progress through the grades, their listening skills should become more refined. Students should become proficient at understanding an oral text as well as delineating a speaker's argument and evaluating the claims that are supported by reasons and evidence.

Language standards are designed to gauge a student's ability to demonstrate a command of the conventions of standard English grammar and usage. The Common Core provides a clear

progression of proficiency in language standards from grade to grade.

The item banks that AIR has developed for SAGE are comprised of items that align to these Common Core standards, assess higher order thinking skills, and follow the item and passage specifications that are described below. Our development of SAGE has provided opportunities to continue refining new item types that are specifically designed to meet the rigorous cognitive demands of the Common Core. AIR's machine-scored constructed-response items allow us to assess a student's ability to answer questions about a passage and support those responses with text-based evidence. (We refer readers to the English Language Arts/Literacy sample items at the end of this section.) Such innovations provide a more thorough measurement of evidence-based literacy skills, which is the cornerstone of the Next Generation Sunshine State Standards in English Language Arts/Literacy.

Passage Selection and Specifications

The passages that AIR developed for SAGE represent a variety of genres and topics. AIR's content experts developed informational texts from multiple content areas, such as history, science, and technical subjects. SAGE literary texts represent authentic pieces from multiple genres, including stories, poetry, and drama. The ratio of informational to literary texts increases at each grade band with a greater percentage of informational texts in the upper grades. Finally, we developed both single passages as well as paired passages in which students are asked to synthesize information across texts.

To ensure that all passages align to the correct grade level and provide sufficient complexity for close analytical reading, AIR developed detailed passage specifications. Content experts used passage complexity worksheets—based on the passage specifications—to perform an in-depth analysis of each passage. The passage specifications call for a close examination of both quantitative measures, such as word counts and Lexile readabilities, as well as qualitative measures, such as passage structure and levels of meaning, all of which are defined as important measures of text complexity in Appendix A of the Common Core: "Research Supporting Key Elements of the Standards."

Exhibit 7.3.1-1 describes the metrics we use when we examine these qualitative measures. The grade-level details in this exhibit provide a description of the passage characteristics in literary texts that are designed for grades 9 and 10. Research supports this complexity rating system, indicating that variations in both general and specific text characteristics impact a reader's ease of comprehension. By incorporating these research findings into the development of the passage specifications, we believe we have developed a more accurate and thorough measure of text complexity.

Exhibit 7.3.1-1: Passage Metrics

Difficulty Factor	Passage Metric Description	Grade-Level Details (sample for grades 9–10)	Research-Based Evidence
Levels of meaning in literature	1. Single, concrete interpretation with few generalizations necessary 2. Some themes not explicitly stated 3. Multiple, successively abstract or general, levels of meaning (key theme or themes implied)	1. a. Characters are static and characteristics are explicitly stated. b. Setting is used as an aesthetic enhancement, not as a way to convey meaning. Mood and tone are used to enhance the setting of the story, but are not critical in conveying the meaning or theme c. Actions have straightforward meanings and clear, immediate effects. d. Symbols are straightforward, common, and closely linked to their meanings, both in terms of proximity and explanatory language. 2. a. Characters are dynamic and a single character may have multiple motives. b. Characteristics are implied through clear action or dialogue. c. Setting serves to underscore the theme and conveys mood or tone, which supports understanding of the explicit theme. d. Actions have straightforward, explicit meanings, but the effects are not fully realized until later in the passage. e. Symbols are straightforward and common, but may not be supported by explanation or elaboration (e.g., children's bare feet symbolize poverty, which is not explained but can be deduced through context). f. There may be some simple analogies or allusions to other works. 3. a. Characters are complex with multiple motives and/or inner conflicts. b. Characterization is implied through subtle actions, others' reactions, and oblique dialogue. c. The setting is used to reveal the theme. d. Setting conveys mood or tone, which is crucial to understanding the implicit theme. e. Reader may need to understand historical context to fully comprehend text. f. Actions have subtle and/or complex meanings, the effects of which may not be immediately realized. g. Symbols are complex, uncommon, and/or make assumptions about students' historical, scientific, or literary knowledge. h. There may be complex analogies or allusions to other works.	Research shows that concrete passages are more comprehensible and easier to recall than abstract passages (Sadoski, Getz, & Fritz, 1993). Comprehension for concrete passages also increases in relation to how easily the reader can imagine the contents of the text (Riding & Taylor, 1976). Characterization, in particular, plays a role in a text's difficulty. When a character's actions are clearly linked to the character's emotional state, the text is much more readily comprehensible (Gillioz, Gygax, & Tapiero, 2012). Similarly, readers draw inferences from descriptions of a character's actions and stated preferences (i.e., descriptions of specific traits as being either positive or negative) (Mensink & Rapp, 2011). However, when a character exhibits behavior that is inconsistent with a perceived trait, the characterization takes longer for readers to process and comprehend (Sparks & Rapp, 2011). An increase in dialogue between characters has a similar effect, as tested readers' response times to items about dialogue scenes were slower than for nondialogue scenes (Long & De Ley, 2000). Beyond-text inferences involving aspects of stories such as morals, authors' messages, and relations to the readers' lives proved the most difficult for students (McConaughy, 1982). The use of figurative language and meanings also increases the difficulty of a text. (Rommers, Dijkstra, & Bastiaansen, 2013). It is easier to understand texts when their words stand for their literal meanings. Figurative language such as satire, irony, and allusions are more difficult to interpret than figurative language such as imagery or metaphors (Fisher, Frey, & Lapp, 2012).

Exhibit 7.3.1-1: Passage Metrics (continued)

Difficulty Factor	Passage Metric Description	Grade-Level Details (sample for grades 9–10)	Research-Based Evidence
Structure	1. Clear, consistent narrative structure; single point of view; events in chronological order 2. One factor varies (structure, point of view, chronology) 3. Two or more factors vary • Avoid requiring graphics for comprehension for accessibility reasons	1. Story is presented in a straightforward fashion without any shifts in time or narrator. At this grade level, this includes significant digression into details and setting, as long as the chronology is consistent. 2. a. Narrator shifts with a clear signal that it is doing so. b. Includes simple chronology shifts, such as clearly introduced flashbacks or memories. c. Structure varies with a mixture of prose and verse OR progresses in a nonlinear fashion. 3. a. Narrator shifts but may not give a clear signal that it is doing so. b. Includes complex chronology shifts, such as flashbacks or memories. c. Structure varies with a mixture of prose and verse OR progresses in a nonlinear fashion.	Research shows that texts structured in a linear and/or hierarchical manner are easier to comprehend (Calisir & Gurel, 2003). There are a number of aspects of text structure that affect the ease of comprehension, including shifts in perspective (Fisher, Frey, & Lapp, 2012) and character shifts (Rich & Taylor, 2000). Flashbacks and narrator changes in a story significantly impact readers' abilities to recall or retell stories, with more flashbacks and more narrator changes throughout a story compounding this effect (Kucer, 2010).
Language	1. Simple, common word choice; explicit and literal use 2. May include unfamiliar vocabulary; abstract meaning; figurative, ironic, or sarcastic use 3. Generally dense, using figurative or purposefully ambiguous, and often unfamiliar, language	1. Uses high-frequency, grade-appropriate vocabulary that relies on denotative meaning. Minimal use of literary devices. Syntax is clear and consistent. 2. a. Uses unfamiliar, above-grade-level words b. Uses at-grade-level words with intended multiple connotations in order to convey multiple meanings. c. Uses common colloquialisms and/or simple dialect. d. Uses simple literary devices and figurative language. 3. a. Words are unfamiliar, archaic, or academic. b. Some words cannot be fully comprehended with context clues. c. Uses authentic, complex dialect colloquialisms, and/or vernacular, which may make assumptions about students' prior experience. d. Uses complex or abstract figurative language or literary devices.	Texts that use common, high-frequency words are easier to understand than texts that use archaic or unfamiliar words. As the amount of familiar vocabulary increases, so does the level of text comprehension (Schmitt, Jiang, & Grabe, 2011). Texts that use unfamiliar language (e.g., Old English) and/or unfamiliar cultural references are more difficult to understand (Fisher, Frey, & Lapp, 2012). Archaic, formal, and domain-specific vocabulary is more difficult than casual or familiar vocabulary (Fisher, Frey, & Lapp, 2012). Both the commonness of words and a reader's prior experience impact comprehension. That is, those who read texts with easy vocabulary and are familiar with the topic are able to more easily recall and summarize a text (Freebody & Anderson, 1983).
Total Score			

Item Writing and Specifications

In addition to passage specifications, our content experts developed item specifications to guide the SAGE item development process. Writers used these specifications while developing SAGE items to ensure a solid alignment with the Common Core standards and to make the best use of our item types.

The item specifications were developed using a vertical alignment for each standard, wherein the suggested task demands and cognitive complexity of items build upon those of the previous grade level, just as the standards themselves do.

Additionally, the item specifications provide models for item writers. The models include item samples that target different Depths of Knowledge (DoKs) and difficulty levels. These item models also annotate the information in order to communicate the intent of the standard and DoK and to clarify for the writer how to manipulate the item difficulty while keeping the cognitive demands the same.

The item specifications include the following information:

- Content Standard: This identifies the standard being assessed.
- Content Limits: This section delineates the specific content that the standard measures and the parameters within which items must be developed to assess the standard accurately, including the lower and upper complexity limits of items.
- Acceptable Response Mechanisms: This section identifies the various ways in which students may respond to an item or prompt. Here we note whether evidence-based selected response (two-part items), extended response, hot text, multiple choice, multi-select, and/or short answer (to be scored automatically with our *proposition scorer*) may be used, and if so, how.
- DoK Demands: This section is broken into three sections—DoK, task demand, and response mechanism. The task demands explain the skills the students may be required to demonstrate and connect these skills to each applicable DoK. The task demands break down the cognitive complexity to show how each DoK level requires differences in higher-order thinking. Finally, the DoK and task demand are connected to appropriate response mechanisms used to assess these skills.
- Sample Items: In this section, sample items present a range of response mechanisms and their corresponding expected difficulties (easy, medium, and hard). Notes delineating the cognitive demands of the item and an explanation of its difficulty level are detailed for each sample item.

Exhibit 7.3.1-2 shows a sample of the item specifications our content experts developed for grade 7 literacy standard RL.7.1. It outlines the limits of the items' content in order to fully address the standard. This includes specifying the type of evidence required and the amount. Furthermore, as the standard requires citing "several pieces of textual evidence," we limit the acceptable response mechanisms to hot text, wherein the student selects the evidence within the text itself, and multi-select, which allows students to choose two or more disparate pieces of evidence. The DoK sections explain the demands for each DoK level and provide the acceptable response mechanisms. The cognitive demands increase from supporting an explicit inference with explicit evidence (DoK 1) to providing implicit evidence for an inference that the student makes (DoK 3). Note that at DoK 1 an item may be a one-part hot text response, while at DoK 3 a hot text item must be two parts to ensure that the student first makes the inference then supports it with evidence. Similarly, the item models pro-

Exhibit 7.3.1-2: Sample Item Specification Sheet

Content Standard	Literacy RL.7.1: Cite several pieces of textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.
Content Limits	The item may ask for evidence that is directly stated in the text or implied. The item may ask for specific and exact quotes, or a summary/description of evidence. The item may require the student to draw inferences from the text. The item should ask for several pieces of evidence.
Acceptable Response Mechanisms	Hot Text • Requires the student to select words or phrases from the text to support an analysis or inference. • Requires the student to select an inference from four choices AND then to select words or phrases from the text to support the inference [two-part Hot Text]. Multi-select • Requires the student to select multiple direct quotes or descriptions of textual evidence to support an explicit or implicit statement from the text.
DoK	1, 2, 3

DoK Demands

DoK	Task Demand	Response Mechanism
DoK 1	Select several pieces of textual evidence to support a statement from the text where both the statement and support are explicit.	1. Hot Text Response 2. Multi-select Response
DoK 2	Select several pieces of textual evidence to support an inference from the text. The inference is provided by the item writer.	1. Hot Text Response [one- and two-part] 2. Multi-select Response
DoK 3	Select several pieces of textual evidence to support an inference from the text. The student must draw the inference.	1. Hot Text Response [two-part] 2. Multi-select Response

Item Models	Sample Item	Difficulty	Notes, Comments	Passage
DoK1	Select two phrases that prove Vicky has lost track of time. [Hot Text]	Easy	The student should select two (to meet the standard) descriptions of the landscape that indicate time passing, such as the tide, the sun, etc. This evidence is explicitly stated in the passage, making this a DoK 1 item. The proximate location of the detail itself makes the item easy.	*The Moon by Night*
DoK2	Which sentences from the text show that Jimmy is fascinated by the immigrant family? [Multi-select]	Easy	Choices will be direct quotes from the text. A multi-select response helps meet the standard, since "several pieces" of evidence should be synthesized. In this item, the student must draw an inference, making the item a DoK 2. However, the difficulty is easy since the inference is not deep and the evidence is explicit and proximate to the site of the inference itself.	*My Antonia*
DoK2	How can readers tell that Jimmy is fascinated by the immigrant family? [Multi-select]	Medium	The student must interpret Jimmy's descriptions of the immigrant family. The answer options present inferences the student must analyze, making this a DoK 2 item. The descriptions, however, synthesize explicit and implicit information for the student, which makes this item more difficult than the last. The item is not hard because the options enumerate the ideas for the student rather requiring him/her to provide the information himself/herself.	*My Antonia*

Exhibit 7.3.1-2: Sample Item Specification Sheet (continued)

Item Models	Sample Item	Difficulty	Notes, Comments	Passage
DoK2	Part A: Select two phrases that show Jimmy has a vivid imagination. Part B: Select the best reason for Jimmy's vivid imagination. [two-part Hot Text]	Hard	The student must highlight two parts of Jimmy's description of Otto. The student must interpret the implicit descriptions of and reasons for Jimmy's vivid imagination. While the author explicitly states that Jimmy reads books about outlaws, the student must understand that the reading fuels his imagination. This, in turn, colors his description of Otto. Requiring students to draw this connection makes the item a DoK 2. The complexity of the text in combination with the fact that the student must synthesize multiple pieces of the text increases the item's difficulty.	*My Antonia*
DoK3	[quote about holding onto childhood] Which sentences from the text highlight the same emotion conveyed in the quote? [Multi-select]	Medium	The student must understand from the quoted text that Vicky is apprehensive. The student must not only draw an inference to discover what the quote reveals about Vicky, but he/she must also synthesize the text as a whole. These cognitive demands make the item a DoK 3. The complexity of the passage—the in-depth nature of the inferences—make the item moderately hard. However, the item is not classified as hard because it provides options to the student and does not require the student to sift through the entire text.	*The Moon by Night*
DoK3	Select a sentence that shows Vicky's mood has changed since the beginning of the passage. [Hot Text]	Hard	To answer this question, the student must first recognize that Vicky's mood has changed from contemplative and stubborn to embarrassed. The student then must select evidence to support this mood (e.g., "I stared down at my bare feet," "keeping me from looking at my rightfully enraged older brother," "he was right and I was wrong"). These two steps require the student to draw and support inferences, which makes the item a DoK 3. The difficulty of this item is increased because here the student must sift through the entire text for support.	*The Moon by Night*

vide explicit examples of items at each DoK level and at various difficulty levels. This level of detail provides the item writer with guidance when developing items, ensuring that the items address the standard and are correctly aligned to the DoK and difficulty levels.

SAGE ELA items were developed by item writers who consistently followed theses item specifications. During each level of review, items were compared to the item specifications to ensure alignment to the standard, grade-level appropriateness and adherence to the content limits set forth in the item specifications.

Taxonomic Classification Systems

Within each grade, items are aligned to a depth of knowledge classification system. Depth of knowledge refers to the cognitive complexity of an item. SAGE items are categorized based on four levels of DoK:

1. DoK 1–Recall. Students recall, recognize, locate, or describe basic facts, details, events, or ideas that are explicitly stated in texts.
2. DoK 2–Skill/Concept. Students use their basic knowledge (DoK 1) and extend their thinking to specify, explain, or show relationships; explain cause and effect; summarize results, concepts, or ideas; make basic inferences or logical predictions from the text; identify main ideas or themes; make accurate generalizations about texts; locate evidence to support central ideas or inferences; distinguish relevant or irrelevant information; analyze structure; and compare literary elements.
3. DoK 3–Strategic Thinking. Students go beyond basic inferences to extend their thinking into non-routine cognitive tasks, such as explaining, generalizing, or connecting ideas using supporting evidence; making inferences about explicit and/or implicit themes; describing how an author's choices or techniques affect the readers' understanding of a text; analyzing information within texts; analyzing relationships between concepts and ideas; and analyzing author's craft.
4. DoK 4–Extended Thinking. At this highest level, students engage in extended thinking and complex cognitive tasks, including explaining how concepts or ideas in a text specifically relate to other content domains; drawing conclusions and applying those conclusions to new situations; analyzing multiple sources for evidence or multiple works by the same author; analyzing works across genres, time periods, or themes; gathering and analyzing multiple sources of information; and synthesizing information across multiple texts. SAGE's extended writing tasks represent the DoK 4 items.

Depending upon the grade band, the actual percentage of items aligned to DoK 1, DoK 2, DoK 3, and DoK 4 may vary. At each grade of the SAGE English Language Arts/Literacy assessment, we maintain the following distribution ranges for DoK:

- DoK 1: 11–19%
- DoK 2: 17–30%
- DoK 3: 14–23%
- DoK 4 (writing): 29%

While the exact number of items on each form may vary, these ranges ensure that all students, regardless of grade level, receive a substantial proportion of items that assess higher-order thinking skills.

Reporting Categories

SAGE English Language Arts/Literacy reporting categories are consistent with the Common Core's classification system of strands and substrands. Reports reflect a student's mastery in each of the categories illustrated in Exhibit 7.3.1-3:

Exhibit 7.3.1-3: English Language Arts/Literacy Reporting Categories for SAGE

Reporting Category/Domains
Reading Standards for Literature
Reading Standards for Informational Text
Listening Comprehension (Informational)
Writing
Language

The relative weight placed on each of the standards within the separate grade bands determines the percentage of items in the reporting categories at each grade level. Consistent with the Common Core, the balance shifts from an even distribution of Reading Literature and Reading Informational Text items in the early grades to a higher percentage of informational items in the upper grades. (Please see Exhibit

7.3.1-4.) shows the relative percentage of each form that will be covered by each reporting category for grades 3–11.

Writing Tasks

Because the Common Core standards require a greater awareness of audience and purpose in student writing, AIR has developed a robust bank of extended writing tasks for SAGE that provide students with meaningful contexts in which to construct their responses. Each writing prompt presents students with a variety of stimuli (usually at least two to three per task) that serve as a springboard for an informed piece of writing. Students are given research articles, charts and graphs, narratives, etc., to serve as the basis for their written response. Students can then use this information, along with their own reasoning, to formulate an essay that is not only a clear and coherent expression of their own thinking, but one that is also grounded in research and evidence.

In the SAGE operational field test, each student will complete two writing pieces, a short expository piece and a long opinion/argumentative piece. The following sections describe each writing domain in greater detail.

Informative/Explanatory Essay

Informative/explanatory writing is focused on conveying information accurately. Informative writing seeks to enlighten the reader about processes or procedures, phenomena, states of affairs, terminology, etc. To produce this kind of writing, students draw from what they already know as well as from primary and secondary sources. Students develop a controlling idea and a primary focus as they relate facts, details, and examples.

SAGE writing prompts present students with two or three passage stimuli on a single topic from science, technical subjects, or social studies. The reading level of the stimulus does not exceed the easy Lexile range for the grade level to enable the students to attend to the content of the passages and not struggle over unfamiliar language and non-content-related vocabulary. Moreover, they help ensure students are assessed on their writing skills and not their reading abilities.

The stimulus is followed by a prompt that asks students to write a short essay about the topic. The students will be required to synthesize information across the passages to write the essay and must cite specific information from the passages to support their main ideas. For example, the prompt may require students to describe the steps in a process, describe problems that need to be solved, etc.

Opinion/Argumentative Essay

Appendix A of the Common Core asserts that persuasive writing is "a reasoned, logical way of demonstrating that the writer's position, belief, or conclusion is valid." SAGE opinion/argumentative prompts ask students to analyze primary and secondary sources, make sound judgments, and present their opinions and arguments in a coherent way that weaves personal opinion with evidence from the texts.

The stimuli that we developed for SAGE present opposing points of view about a topic so that students have enough information to take a stand. The stimuli are followed by a prompt that asks students to write an opinion/argumentative essay. The students will be required to synthesize information across the passages to write the essay and must cite specific information from the passages to support the ideas they present.

Sample Test Blueprint

A sample test blueprint for SAGE grade 7 ELA is shown in Exhibit 7.3.1-5. Each of the proposed reporting categories (domains) is noted by green highlighting. The domains (pink) and standards (white) which support each of the reporting categories are further delineated in the blueprint.

Note that minima and maxima are specified at each level of the content hierarchy and within each standard. This ensures that the content and demands of each sub-strand are fully addressed.

These blueprints are defined for an adaptive administration. The total numbers may need to increase if Florida decides to use the bank to create a fixed-form test. The longer test is often necessary to cover the range of performances seen in the population.

The distribution of item ranges is designed to accomplish several important goals. First, the Florida Standards Assessments must reflect a representative sample of the knowledge and skills that students are expected to achieve by the end of each school year. In addition, each domain must be assessed with sufficient items to support reliable subscale performance-level reporting. The blueprints are designed to accomplish both goals, with items targeting the full breadth of the academic content standards but constrained enough to ensure that there are sufficient items in each domain, thereby achieving reliable subscale reporting. Moreover, item ranges for DoK levels and item types ensure that students, regardless of overall ability, are administered test items representing the full range of cognitive complexity and are provided the opportunity to demonstrate their knowledge and skills through the range of item types.

The distribution of item ranges is designed to accomplish several important goals. First, the Florida Standards Assessments must reflect a representative sample of the knowledge and skills that students are expected to achieve by the end of each school year. In addition, each domain must be assessed with sufficient items to support reliable subscale performance-level reporting. The blueprints are designed to accomplish both goals, with items targeting the full breadth of the academic content standards but constrained enough to ensure that there are sufficient items in each domain, thereby achieving reliable subscale reporting.

Exhibit 7.3.1-5: Sample SAGE Grade 7 ELA Blueprint

Standard	Description	MIN	MAX
	Literature	**12**	**14**
	Key Ideas and Details	**4**	**6**
RL.7.1	Cite several pieces of textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.	0	3
RL.7.2	Determine a theme or central idea of a text and analyze its development over the course of the text; provide an objective summary of the text.	0	3
RL.7.3	Analyze how particular elements of a story or drama interact (e.g., how setting shapes the characters or plot).	0	3
	Craft and Structure	**3**	**5**
RL.7.4	Determine the meaning of words and phrases as they are used in a text, including figurative and connotative meanings; analyze the impact of rhymes and other repetitions of sounds (e.g., alliteration) on a specific verse or stanza of a poem or section of a story or drama.	0	3
RL.7.5	Analyze how a drama's or poem's form or structure (e.g., soliloquy, sonnet) contributes to its meaning.	0	3
RL.7.6	Analyze how an author develops and contrasts the points of view of different characters or narrators in a text.	0	3
	Integration of Knowledge and Ideas	**4**	**6**
RL.7.7	Compare and contrast a written story, drama, or poem to its audio, filmed, staged, or multimedia version, analyzing the effects of techniques unique to each medium (e.g., lighting, sound, color, or camera focus and angles in a film).	0	2
RL.7.9	Compare and contrast a fictional portrayal of a time, place, or character and a historical account of the same period as a means of understanding how authors of fiction use or alter history.	0	2
	Informational	**15**	**7**
	Key Ideas and Details	**5**	**7**
RL.7.1	Cite several pieces of textual evidence to support analysis of what the text says explicitly as well as inferences drawn from the text.	0	3
RL.7.2	Determine two or more central ideas in a text and analyze their development over the course of the text; provide an objective summary of the text.	0	3
RL.7.3	Analyze the interactions between individuals, events, and ideas in a text (e.g., how ideas influence individuals or events, or how individuals influence ideas or events).	0	3
	Craft and Structure	**4**	**6**
RL.7.4	Determine the meaning of words and phrases as they are used in a text, including figurative and connotative meanings; analyze the impact of rhymes and other repetitions of sounds (e.g., alliteration) on a specific verse or stanza of a poem or section of a story or drama.	0	3
RL.7.5	Analyze the structure an author uses to organize a text, including how the major sections contribute to the whole and to the development of the ideas.	0	3
RL.7.6	Determine an author's point of view or purpose in a text and analyze how the author distinguishes his or her position from that of others.	0	3
	Integration of Knowledge of Ideas	**2**	**4**
RL.7.7	Compare and contrast a text to an audio, video, or multimedia version of the text, analyzing each medium's portrayal of the subject (e.g., how the delivery of a speech affects the impact of the words).	0	2
RL.7.8	Trace and evaluate the argument and specific claims in a text, assessing whether the reasoning is sound and the evidence is relevant and sufficient to support the claims.	0	2
RL.7.9	Analyze how two or more authors writing about the same topic shape their presentations of key information by emphasizing different evidence or advancing different interpretations of facts.	0	2

Exhibit 7.3.1-5: Sample SAGE Grade 7 ELA Blueprint (continued)

Standard	Description	MIN	MAX
	Language/Vocabulary Acquisition and Use	**1**	**3**
L.7.4	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on *grade 7 reading and content*, choosing flexibly from a range of strategies.	0	2
L.7.5	Demonstrate understanding of figurative language, word relationships, and nuances in word meanings.	0	2
	Language/Editing Task	**2**	**2**
Literary L.7.1 L.7.2	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking. Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.	1	1
Informational L.7.1 L.7.2	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking. Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.	1	1
	Listening	**8**	**10**
	Comprehension and Collaboration	**8**	**10**
SL.7.1c	Pose questions that elicit elaboration and respond to others' questions and comments with relevant observations and ideas that bring the discussion back on topic as needed.		
SL.7.1d	Acknowledge new information expressed by others and, when warranted, modify their own views.	1	6
SL.7.2	Analyze the main ideas and supporting details presented in diverse media and formats (e.g., visually, quantitatively, orally) and explain how the ideas clarify a topic, text, or issue under study.	1	6
SL.7.3	Delineate a speaker's argument and specific claims, evaluating the soundness of the reasoning and the relevance and sufficiency of the evidence.	1	6
	Writing		**Pts.**
	Task 1: Short Essay		**10**
	Production and Distribution		**4**
W.7.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.		
W.7.5	With some guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on how well purpose and audience have been addressed.		
W.7.6	Use technology, including the Internet, to produce and publish writing and link to and cite sources as well as to interact and collaborate with others, including linking to and citing sources.		
	Use of Information		**4**
W.7.7	Conduct short research projects to answer a question, drawing on several sources and generating additional related, focused questions for further research and investigation.		
W.7.8	Gather relevant information from multiple print and digital sources, using search terms effectively; assess the credibility and accuracy of each source; and quote or paraphrase the data and conclusions of others while avoiding plagiarism and following a standard format for citation.		
W.7.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.		

Exhibit 7.3.1-5: Sample SAGE Grade 7 ELA Blueprint (continued)

Standard	Description	MIN	MAX
	Writing		**Pts.**
	Conventions		**2**
L.7.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.		
L.7.4 L.7.5 L.7.6	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on *grade 7 reading and content,* choosing flexibly from a range of strategies. Demonstrate understanding of figurative language, word relationships, and nuances in word meanings. Acquire and use accurately grade-appropriate general academic and domain-specific words and phrases; gather vocabulary knowledge when considering a word or phrase important to comprehension or expression.		
	Task 2: Long Essay		**10**
	Production and Distribution		**4**
W.7.4	Produce clear and coherent writing in which the development, organization, and style are appropriate to task, purpose, and audience.		
W.7.5	With some guidance and support from peers and adults, develop and strengthen writing as needed by planning, revising, editing, rewriting, or trying a new approach, focusing on how well purpose and audience have been addressed.		
W.7.6	Use technology, including the Internet, to produce and publish writing and link to and cite sources as well as to interact and collaborate with others, including linking to and citing sources.		
	Use of Information		**4**
W.7.8	Gather relevant information from multiple print and digital sources, using search terms effectively; assess the credibility and accuracy of each source; and quote or paraphrase the data and conclusions of others while avoiding plagiarism and following a standard format for citation.		
W.7.9	Draw evidence from literary or informational texts to support analysis, reflection, and research.		
	Conventions		**2**
L.7.1 L.7.2	Demonstrate command of the conventions of standard English grammar and usage when writing or speaking. Demonstrate command of the conventions of standard English capitalization, punctuation, and spelling when writing.		
L.7.3	Use knowledge of language and its conventions when writing, speaking, reading, or listening.		
L.7.4 L.7.5 L.7.6	Determine or clarify the meaning of unknown and multiple-meaning words and phrases based on *grade 7 reading and content,* choosing flexibly from a range of strategies. Demonstrate understanding of figurative language, word relationships, and nuances in word meanings. Acquire and use accurately grade-appropriate general academic and domain-specific words and phrases; gather vocabulary knowledge when considering a word or phrase important to comprehension or expression.		

Moreover, item ranges for DoK levels and item types ensure that students, regardless of overall ability, are administered test items representing the full range of cognitive complexity and are provided the opportunity to demonstrate their knowledge and skills through the range of item types.

Tools Available in the Testing Environment

AIR's test delivery platform supports a number of tools that make the ELA assessment more accessible, including a zoom function, a passage-expansion tool, and a highlighting tool. Exhibit 7.3.1-6 shows the test environment before the use of any tool.

The passage-expansion tool (Exhibit 7.3.1-7) allows students to click an arrow in the passage itself in order to expand the stimulus and better view the text.

Exhibit 7.3.1-6: Test Environment before Use of Any Tool

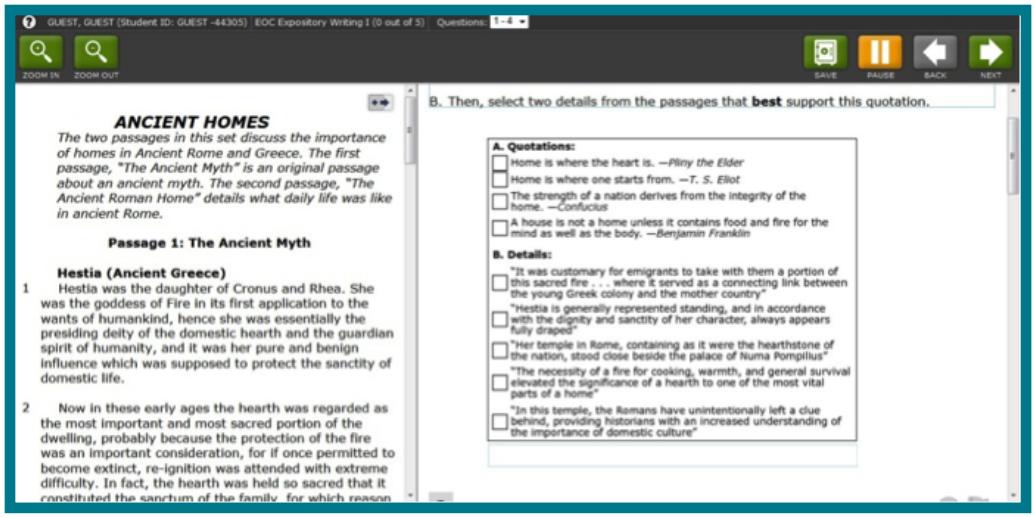

Exhibit 7.3.1-7: Test Environment after Use of the Passage-Expansion Tool

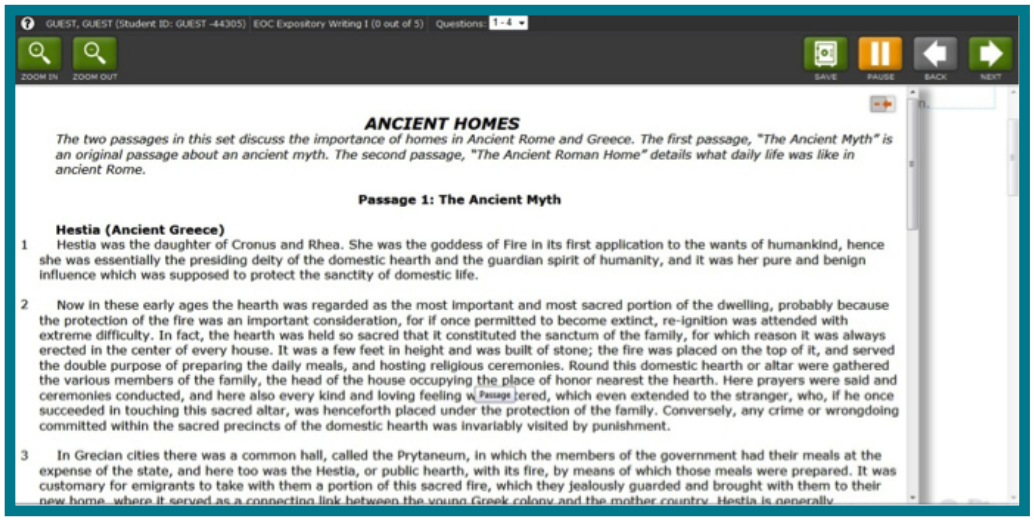
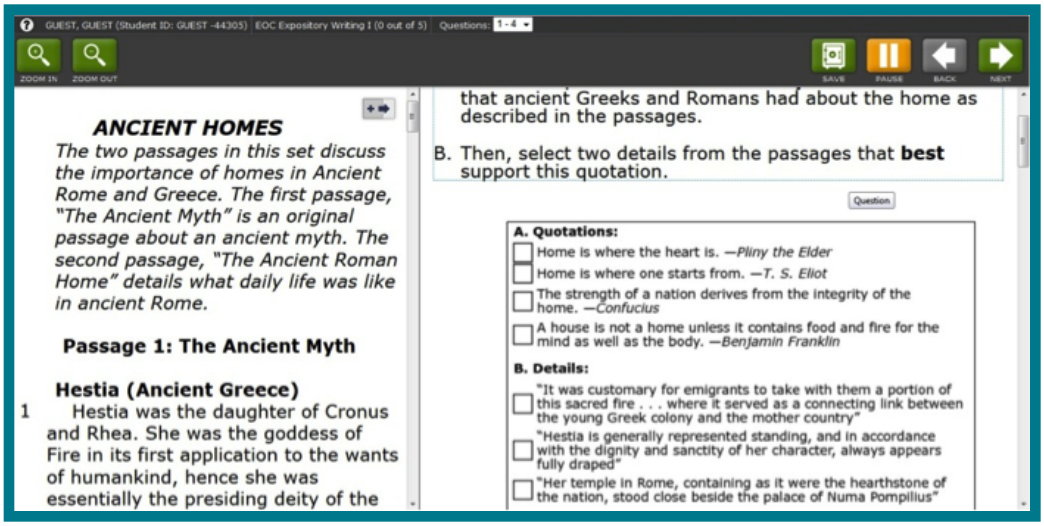


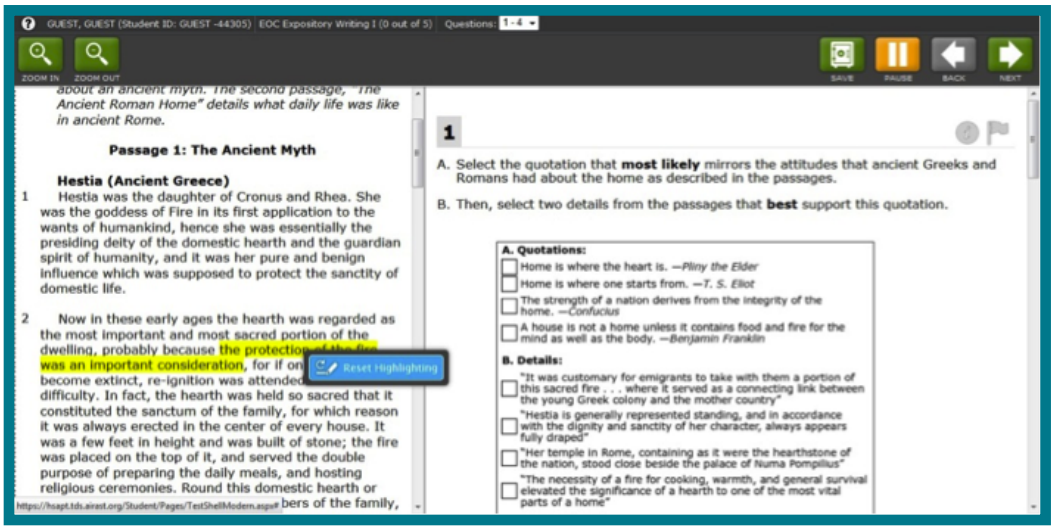
Similarly, the zoom function (Exhibit 7.3.1-8) increases accessibility to the text by allowing the student to zoom in or out as necessary, in both regular view and when the passage is expanded.

Exhibit 7.3.1-8: Test Environment after Use of the Zoom Function



Finally, students may highlight sections of the text as they deem necessary by using their mouse to select text and then clicking their mouse to highlight text (Exhibit 7.3.1-9).

Exhibit 7.3.1-9: Test Environment after Use of the Zoom Function



Mathematics Test Content

Overview of the Florida Next Generation Sunshine State Standards in Mathematics

In 2010, Florida adopted the CCSS in Mathematics as part of Florida's suite of Next Generation Sunshine State Standards. Three characteristics distinguish these new standards in Mathematics:

1. The standards focus on fewer topics in a more in-depth way for each grade.
2. The topics align across grades to form coherent learning progressions.
3. The standards identify and emphasize mathematical practices that cut across topics and are integral to mathematical thinking.

By the 2013–2014 school year, these new standards are to be fully implemented.

The 2010 Next Generation Sunshine State Standards in Mathematics focus more narrowly than the 2007 Next Generation Sunshine State Standards in Mathematics, as well as prior Mathematics standards. For example, in grade 6, teachers are expected to focus on these four critical areas:

1. Connecting ratio and rate to whole number multiplication and using concepts of ratio and rate to solve problems
2. Completing understanding of division of fractions and extending the notion of number to the system of rational numbers, which includes negative numbers
3. Writing, interpreting, and using expressions and equations
4. Developing understanding of statistical thinking

The high school standards are grouped in conceptual categories: Number and Quantity, Algebra, Functions, Modeling, Geometry, and Statistics and Probability. Depending on the specific high school Mathematics course, certain conceptual categories are more heavily emphasized than others.

The Florida Mathematics End-of-Course (EOC) Assessments measure student achievement of the Next Generation Sunshine State Standards for three specific courses: Algebra I, Geometry, and Algebra II.

1. In Algebra I, students begin to explore the real number system, reason about units, rewrite algebraic expressions, master linear and quadratic functions, apply knowledge of the Cartesian plane to linear equations and systems, and apply basic statistics and simple probability within a modeling context.
2. In Geometry, students further develop their understanding of geometric transformations within a modeling context, apply measurement formulas (particularly surface area and volume of complex shapes), solve applied problems involving the Pythagorean Theorem, use the distance formula in coordinate systems to connect equations and graphs of circles, and apply knowledge of algebra to prove basic geometric theorems in the Cartesian plane.
3. In Algebra II, students perform more complex arithmetic with polynomials, solve equations with extraneous solutions, solve quadratic equations with complex number roots, use their knowledge of algebra and geometry to connect equations and graphs of conic sections, apply knowledge of right triangle trigonometry to the entire unit circle, and fit and model exponential functions to a set of data.

The SAGE assessments for high school, although they follow a more integrated path-

way, include only items aligned to the CCSS. Therefore, items designated for a particular course under the SAGE assessment will be designated for the appropriate course in Florida.

These emphases align across grades to form coherent learning progressions in which the content from one grade supports the topics to be learned in subsequent grades. Elementary school standards, which have a heavy emphasis on numbers in base 10, fractions, and operations and algebraic thinking, are designed to prepare students for success in middle school Mathematics. Middle school standards, which include ratio and proportional reasoning, equations, and functions, emphasize the knowledge needed for high school Mathematics. The high school standards are designed to ensure college and career readiness. In particular, the high school standards emphasize mathematical modeling and allow for more advanced studies in Mathematics. Throughout the grades, the standards emphasize the eight Standards for Mathematical Practice identified in the CCSS:

1. Make sense of problems and persevere in solving them
2. Reason abstractly and quantitatively
3. Construct viable arguments and critique the reasoning of others
4. Model with mathematics
5. Use appropriate tools strategically
6. Attend to precision
7. Look for and make use of structure
8. Look for and express regularity in repeated reasoning

These eight practices do not stand apart from the Standards for Mathematical Content (i.e., the actual Mathematics content covered by the standards). Connections need to be made between the Standards for Mathematical Practice and the Standards for Mathematical Content, particularly within assessments. For example, when students are given tasks that demand understanding of a concept rather than pure recall, it is easier to see the connection between the Standards for Mathematical Practice and the Standards for Mathematical Content. Similarly, higher Depth of Knowledge (DoK) tasks require particular attention to the intersection between these two types of standards.

The SAGE item bank comprises only items that are aligned to the Common Core, make use of the Mathematics Practices, and follow the item specifications described in the following section.

Item Specifications for Mathematics

Item specifications, designed by content experts at AIR, strategically guide the item development process. They are detailed documents which outline content limits and model tasks for a particular standard. Detailed item specifications include the following:

- Content Limits: This section delineates the specific content measured by the standard and the extent to which the content is different across grade levels. For example, in grade 3, fraction denominators are limited to 2, 3, 4, 6, and 8.
- Acceptable Response Mechanisms: This section identifies the various ways in which students may respond to a prompt—e.g., multiple choice, graphic response, proposition response, equation response, multi-select.
- Math Practice Cluster: The item specifications outline to which practice cluster(s) a particular standard could be aligned—PC1, PC2, PC3, or none. See section titled "Practice Clusters" (under Taxonomic Classification Systems) for more detailed information on how the Standards for

Mathematical Practice were grouped together to define these Practice Clusters.

- Depth of Knowledge: The task demands of each standard can be classified as DoK1, DoK2, and/or DoK3.
- Task Demands: In this section, the standards are broken down into specific task demands aligned to the standard. In addition, each task demand is assigned appropriate response mechanism, DoK, and Practice Clusters specifically relevant to that particular task demand.
- Examples and Sample Items: In this section, sample items are delineated along with their corresponding expected difficulties (easy, medium, and hard.) Notes for modifying the difficulty of each task demand are detailed with suggestions for the item writer. The suggestions for adapting the difficulty based on the task demands are research-based and have been reviewed by both content experts and a cognitive psychologist.

The SAGE Mathematics items were developed by item writers who consistently followed the item specifications. During each level of review, items were compared to the item specifications to ensure their alignment to the standard, grade-level appropriateness, and adherence to the content limits set forth in the item specifications.

Exhibits 7.3.1-10 and 7.3.1-11 demonstrate item specifications for different standards. Exhibit 7.3.1-10 shows how two standards, 5.G.1 and 5.G.2, which are related topics and taught simultaneously, can be grouped together for assessment purposes. Exhibit 7.3.1-11 gives sample secondary Mathematics item specifications for a single standard.

Taxonomic Classification Systems

Within each grade or course, all items are aligned according to two taxonomic classification systems, DoK and PC.

Depth of Knowledge (DoK)

Depth of Knowledge refers to the cognitive complexity of the item and the cognitive demands upon the student. Based upon work done by Webb, there are four levels of DoK:

1. DoK1—Recall. Students recall basic mathematical ideas, perform basic arithmetic operations using established algorithms, and identify examples of general mathematics principles.
2. DoK2—Skill/Concept. Students apply their basic knowledge (DoK1) and extend their thinking to problem solve, identify relationships, and draw conclusions.
3. DoK3—Strategic Thinking. Students go beyond basic problem solving (i.e., word problems) to extend their thinking to nonroutine problem solving, hypothesize, and critique arguments or problem solving strategies.
4. DoK4—Extended Thinking. At this highest level, students engage in extended problem-solving activities, which require integration of multiple standards. For example, students may engage in a performance task which includes a common stimulus and four to six associated items related to the stimulus.

Depending upon the grade band, the percentage of items aligned to DoK1, DoK2, and DoK3 may vary. For example, in the elementary grades (3-5), the following distribution ranges are recommended, based upon the task demands and content of the standards:

- DoK1: 20–30%

Exhibit 7.3.1-10: Sample Elementary Item Specifications (5.G.1 and 5.G.2)

Content Standard	Math.Content.5.G.A.1 Use a pair of perpendicular number lines, called axes, to define a coordinate system, with the intersection of the lines (the origin) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers, called its coordinates. Understand that the first number indicates how far to travel from the origin in the direction of one axis, and the second number indicates how far to travel in the direction of the second axis, with the convention that the names of the two axes and the coordinates correspond (e.g., x-axis and x-coordinate, y-axis and y-coordinate). Math.Content.5.G.A.2 Represent real-world and mathematical problems by graphing points in the first quadrant of the coordinate plane and interpret coordinate values of points in the context of the situation.
Content Limits	Points in first quadrant Includes origin and points on positive x- and y-axes Whole numbers Real-world contexts must have axes scaled to whole numbers (not letters)
Acceptable Response Mechanisms	Graphic response—May require plotting a point on the coordinate plane Equation response—May require identifying the x- or y-value of an ordered pair given a point on the coordinate plane Proposition response—May require explaining the meaning of a point's coordinates
Math Practice Cluster(s)	PC1 and PC2
DoK	1, 2

Model Task

Context	Any situation that includes the use (or understanding) of the coordinate plane.

DoK Demands

DOK	Task Demand	Response Mechanism	PC1	PC2	PC3	None
DoK 1	Recognize and identify the location of an ordered pair (e.g., plot ordered pairs; state coordinates given a point on the coordinate plane.)	1. Equation response 2. Graphic response	X			X
DoK 2	Interpret the location of a point on the coordinate plane.	1. Equation response 2. Graphic response	X	X		
DoK 3	N/A					

Example

Context	Consider the point (2, 5).
Context Easier	Graphic is shown or coordinates are given. No context.
Context More Difficult	Parameters are given. Context may be included. Interpretation required.

Item Models	Sample Item	Difficulty	Notes, Comments
DoK1	Plot the point (2, 5) on the coordinate plane.	Easy	Recognizing and identifying a point represented by an ordered pair.
DoK2	Write a statement that describes the location of the point (2, 5).	Medium	Explaining and interpreting the meaning of an ordered pair.
DoK2	Point *A* is located on the *x*-axis. Point *B* is located exactly 5 units above point *A*. Which could be the coordinates of points *A* and *B*? Explain your reasoning.	Hard	Reasoning about and comparing the location of points on the coordinate plane given parameters.

Exhibit 7.3.1-11: Sample Secondary Mathematics Item Specifications (G-C.5)

Content Standard	Math.Content.HSG-C.B.5 Derive using similarity the fact that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality; derive the formula for the area of a sector.
Content Limits	Radian introduced only as a unit of measure Note: Emphasize the similarity of all circles. Note that by similarity of sectors with the same central angle, arc lengths are proportional to the radius. Use this as a basis for introducing radian as a unit of measure. It is not intended that it be applied to the development of circular trigonometry in this course.
Acceptable Response Mechanisms	Equation response—May require creating equations related to circles Graphic response—May require creating circles (Note: This is currently being developed) Simulation response—May require generating tables and creating circles
Math Practice Cluster(s)	PC1
DoK	2

Model Task

Context	Any situation that involves comparing circles.

DoK Demands

DoK	Task Demand	Response Mechanism	PC1	PC2	PC3	None
DoK 1	N/A					
DoK 2	Understand that sectors with different arcs have arc lengths that are proportional. Understand that sectors with the same arc of two different circles are proportional.	1. Graphic response 2. Simulation response	X			
DoK 3	N/A					

Example

Context	A circle has points *A, B,* and *C* with center *O*. The arc lengths of $AB = 110$, and $BC = 85$. What is the arc length of *CA* and the measure of angle *COA*?
Context Easier	Reduce the number of sectors in the circle.
Context More Difficult	Provide the radius of a circle.

Item Models	Sample Item	Difficulty	Notes, Comments
DoK2	A circle has points *A* and *B* with center *O*. The arc lengths of $AB = 110$. What is the angle of *AOB*?	Easy	Recalling definitions and facts to show the relationship between two entities.
DoK2	A circle has points *A, B,* and *C* with center *O*. The arc lengths of $AB = 110$, and $BC = 85$. What is the arc length of *CA* and angle of *COA*?	Medium	Interpreting given information to solve a problem.
DoK2	A circle has a radius of 3 units and a central angel equal to 45 degrees. What is the area of the circle not covered by the sector?	Hard	Analyzing the given information to solve non-routine problems.

- DoK2: 40–60%
- DoK3: 10–20%

As the grades progress, there is less of an emphasis on DoK1 and a greater emphasis on DoK2 and DoK3 task demands. By high school, the following distribution of DoK task demands is recommended:

- DoK1: 10–25%
- DoK2: 40–60%
- DoK3: 20–30%

These ranges ensure that even in lower grades, a student will receive a substantial proportion of items that assess higher order thinking skills and that these students are not limited to lower level DoK items. DoK ranges hold true for students of all ability levels, not just the higher level students.

Practice Clusters

The Practice Clusters were created by AIR by extracting the three biggest ideas from the eight Standards for Mathematical Practice. These three ideas are problem solving, mathematical reasoning, and the ability to generalize. These practice clusters are presented in greater detail below.

1. Practice Cluster 1: *Use Mathematics to Solve Problems.* Problem solving and modeling go hand in hand with mathematics education. Many times application of mathematical concepts is the truest way to grasp a student's understanding. This practice cluster requires the student to use mathematics to model real-world situations and solve problems. The student is able to abstract from a concrete situation to a mathematical model. In order for a student to plan a solution path or find a solution to a problem, he or she may apply characteristics of a similar problem or try out special cases. These strategies allow for further exploration of the problem's characteristics or evaluation of an interim or final solution. Successful problem solving requires the ability to connect variables to their real-world values and use them to evaluate the reasonableness of the solution. When solutions are not reasonable, the student can identify why. Math practices 1, 4, and 5 are clearly present in this cluster; however, this does not mean the other practices should be excluded.
2. Practice Cluster 2: *Use Mathematical Reasoning.* Reasoning is fundamental for true mathematical understanding. Being able to present mathematical concepts in a sensible, logical manner to prove or disprove arguments is essential. Students can reason by using stated assumptions and previously established results. They can make conjectures and develop a logical path to test their conjecture. Students will identify cases covered by a situation and recognize supporting examples and counter examples. Reasoning inductively with arguments that make sense given the context of the problem is a necessary skill. Students will be able to evaluate chains of logic and determine the domain in which a solution applies. The communication will be precise in terms of language, labeling, equations, and specific units of measure. This practice cluster represents practices 2, 3, and 6 but is not meant to exclude the other practices. Reasoning, and communicating one's reasoning, cannot be done in isolation of the other practices.
3. Practice Cluster 3: *Use Characteristics of Problems to Generalize.* Mathematical proficiency means being able to identify structure or patterns within a problem and use this to make generalizations. The student will be able to apply generalizations to infer characteristics about a solution, especially when the information may not be available

for a complete solution. Many times these generalizations will lead to mathematical shortcuts. The student can identify structures and/or patterns to analyze the characteristics of mathematical properties. Math practices 7 and 8 are clearly a part of this practice cluster. However, it is important to realize that many times this practice cluster will also be used in combination with the other two.

The blueprint will specify which content standards match each practice cluster or clusters. All items will be aligned to the content standards. Each item may also align to one or more practice clusters. Our expectation is that out of the 45–50 items on a computer-adaptive test, approximately 30 of the items will also align to one or more practice clusters. All SAGE assessment items are tagged with the corresponding practice cluster, expected difficulty, and DoK.

Reporting Categories

For any particular grade, the reporting categories are determined by the relative weight placed on each of the standards within that reporting category. For certain grades, domains are grouped together (e.g., geometry is grouped with measurement and data in the elementary grades.) Exhibit 7.3.1-12 shows the relative percentage of each form that will be covered by each reporting category for grades 3–8.

Further, the grade 6 assessment will be segmented into two sections, calculator and no-calculator. The content of the items will dictate which section they are to be assessed. SAGE assessment items for grade 6 were specifically written with a calculator or non-calculator segment in mind. However, in general, the following reporting categories are deemed appropriate for the calculator segment: Ratios and Proportional Reasoning, Expressions and Equations, Geometry, and

Exhibit 7.3.1-12: Summary of Reporting Categories for Grades 3–8.

Mathematics Grade 3

Reporting Category/Domains	Reporting Category/ Domain (Percentage)	
	Min.	Max.
Operations and Algebraic Thinking	29	38
Number and Operations in Base 10	18	22
Number and Operations—Fractions	27	31
Measurement and Data and Geometry	18	22

Mathematics Grade 4

Reporting Category/Domains	Reporting Category/ Domain (Percentage)	
	Min.	Max.
Operations and Algebraic Thinking	18	22
Number and Operations in Base 10	28	32
Number and Operations—Fractions	28	32
Measurement and Data and Geometry	14	22

Mathematics Grade 5

Reporting Category/Domains	Reporting Category/ Domain (Percentage)	
	Min.	Max.
Operations and Algebraic Thinking	16	20
Number and Operations in Base 10	30	36
Number and Operations—Fractions	28	34
Measurement and Data and Geometry	18	22

Exhibit 7.3.1-12: Summary of Reporting Categories for Grades 3–8 (continued)

Mathematics Grade 6

Reporting Category/Domains	Reporting Category/ Domain (Percentage)	
	Min.	Max.
Ratio and Proportions	28	32
Expressions and Equations	28	34
The Number System	18	22
Geometry and Statistics and Probability	16	20

Mathematics Grade 7

Reporting Category/Domains	Reporting Category/ Domain (Percentage)	
	Min.	Max.
Ratio and Proportions	22	26
Expressions and Equations	16	20
The Number System	18	22
Geometry	18	22
Statistics and Probability	18	22

Mathematics Grade 8

Reporting Category/Domains	Reporting Category/ Domain (Percentage)	
	Min.	Max.
Functions	20	24
Expressions and Equations	20	24
Geometry and the Number System	34	40
Statistics and Probability	16	20

Statistics and Probability. Our test delivery system allows students to complete only one segment before they continue to the other segment. For example, if students are allowed to use the calculator in the first segment only, the test administrator would allow students to continue to the second section after collecting handheld calculators (if allowed by local policy), and the second segment would not have an online calculator available.

Sample Test Blueprint

A sample test blueprint for EOC: Geometry is shown in Exhibit 7.3.1-13. Each of the proposed reporting categories (domains) is noted by green highlighting. The clusters (pink) and standards (white), which support each of the reporting categories, are further delineated in the blueprint. An asterisk indicates a standard related to making Mathematical models.

Note that minima and maxima are specified at each level of the content hierarchy. So, in the example in Exhibit 7.3.1-13, the cluster G.CO.1 requires a minimum of 4 items. It does not specify which of the standards within G.CO.1 must be included. Instead, it ensures that most of the standard be covered by allowing a maximum of only one item from each of the standards below it. Hence, at least 4 of the 5 standards will have to be covered.

These blueprints are defined for an adaptive administration. The total numbers may need to increase if Florida decides to use the bank to create a fixed-form test. The longer test is often necessary to cover the range of performance seen in the population.

Tools Available in the Testing Environment

AIR's test delivery platform supports a wide variety of tools, including a ruler, compass, and straightedge. The SAGE exam does not make use of the ruler. Readers are referred to the detailed description in Section 7.4.9.

Calculators

AIR's online calculators, provided through the test delivery system, allow for calculators that

Exhibit 7.3.1-13: Sample Geometry End-of-Course Blueprint

Standard	Description	MIN	MAX
G.CO	**Congruence**	**20**	**22**
G.CO.1	**Experiment with transformations in the plane.**	**4**	**6**
G.CO.1.1	1. Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.	0	1
G.CO.1.2	2. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).	0	1
G.CO.1.3	3. Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.	0	1
G.CO.1.4	4. Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.	0	1
G.CO.1.5	5. Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.	0	1
G.CO.2	**Understand congruence in terms of rigid motions.**	**4**	**6**
G.CO.2.6	6. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.	0	2
G.CO.2.7	7. Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.	0	2
G.CO.2.8	8. Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.	0	2
G.CO.3	**Prove geometric theorems.**	**4**	**6**
G.CO.3.9	9. Prove theorems about lines and angles. *Theorems include: vertical angles are congruent; when a transversal crosses parallel lines, alternate interior angles are congruent and corresponding angles are congruent; points on a perpendicular bisector of a line segment are exactly those equidistant from the segment's endpoints.*	0	2
G.CO.3.10	10. Prove theorems about triangles. *Theorems include: measures of interior angles of a triangle sum to 180°; base angles of isosceles triangles are congruent; the segment joining midpoints of two sides of a triangle is parallel to the third side and half the length; the medians of a triangle meet at a point.*	0	2
G.CO.3.11	11. Prove theorems about parallelograms. *Theorems include: opposite sides are congruent, opposite angles are congruent, the diagonals of a parallelogram bisect each other, and conversely, rectangles are parallelograms with congruent diagonals.*	0	2
G.CO.4	**Make geometric constructions.**	**4**	**6**
G.CO.4.12	12. Make formal geometric constructions with a variety of tools and methods (compass and straight edge, string, reflective devices, paper folding, dynamic geometric software, etc.). *Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line.*	1	3
G.CO.4.13	13. Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle.	1	3

Exhibit 7.3.1-13: Sample Geometry End-of-Course Blueprint (continued)

Standard	Description	MIN	MAX
G.SRT	**Similarity, Right Triangles, and Trigonometry**	**9**	**11**
C.SRT.1	**Understand simiarity in terms of similarity transformations.**	**2**	**4**
G.CO.1.1	1. Verify experimentally the properties of dilations given by a center and a scale factor.	0	1
G.SRT.1.1a	a. A dilation takes a line not passing through the center of the dilation to a parallel line, and leaves a line passing through the center unchanged.	0	1
G.SRT.1.1b	b. The dilation of a line segment is longer or shorter in the ratio given by the scale factor.	0	1
G.SRT.1.2	2. Given two figures, use the definition of similarity in terms of similarity transformations to decide if they are similar; explain using similarity transformations the meaning of similarity for triangles as the equality of all corresponding pairs of angles and the proportionality of all corresponding pairs of sides.	0	1
G.SRT.1.3	3. Use the properties of similarity transformations to establish the AA criterion for two triangles to be similar.	0	1
G.SRT.2	**Prove theorems involving similarity.**	**2**	**4**
G.SRT.2.4	4. Prove theorems about triangles. *Theorems include: a line parallel to one side of a triangle divides the other two proportionally, and conversely; the Pythagorean Theorem proved using triangle similarity.*	0	2
G.SRT.2.5	5. Use congruence and similarity criteria for triangles to solve problems and to prove relationships in geometric figures.	0	2
G.SRT.3	**Define trigonometric ratios and solve problems involving right triangles.**	**2**	**4**
G.SRT.3.6	6. Understand that by similarity, side ratios in right triangles are properties of the angles in the triangle, leading to definitions of trigonometric ratios for acute angles.	0	2
G.SRT.3.7	7. Explain and use the relationship between the sine and cosine of complementary angles.	0	2
G.SRT.3.8	8. Use trigonometric ratios and the Pythagorean Theorem to solve right triangles in applied problems.	0	2
G.C	**Circles**	**9**	**11**
G.C.1	**Understand and apply theorems about circles.**	**3**	**5**
G.C.1.1	1. Prove that all circles are similar.	0	2
G.C.1.2	2. Identify and describe relationships among inscribed angles, radii, and chords. *Include the relationship between central, inscribed, and circumscribed angles; inscribed angles on a diameter are right angles; the radius of a circle is perpendicular to the tangent where the radius intersects the circle*	0	2
G.C.1.3	3. Construct the inscribed and circumscribed circles of a triangle and prove properties of angles for a quadrilateral inscribed in a circle.	0	2
G.C.2	**Find arc lengths and areas of sectors of circles.**	**3**	**5**
G.C.2.5	5. Derive using similarity the fact that the length of the arc intercepted by an angle is proportional to the radius, and define the radian measure of the angle as the constant of proportionality; derive the formula for the area of a sector.	3	5
G.GPE	**Expressing Geometric Properties With Equations**	**9**	**11**
G.GPE.1	**Translate between the geometric description and the equation for a conic section.**	**3**	**5**
G.GPE.1.1	1. Derive the equation of a circle of given center and radius using the Pythagorean Theorem; complete the square to find the center and radius of a circle given by an equation.	1	3
G.GPE.1.2	2. Derive the equation of a parabola given a focus and directrix.	1	3

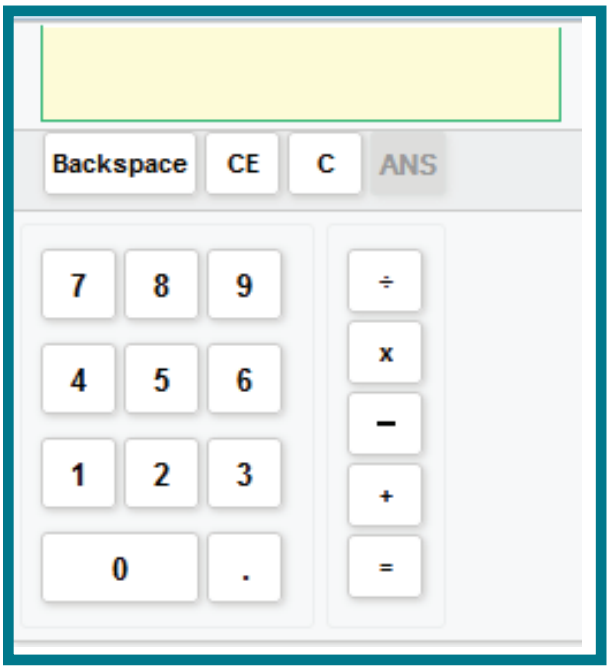
G.GPE	**Expressing Geometric Properties With Equations**	**9**	**11**
G.GPE.2	**Use coordinates to prove simple geometric theorems algebraically.**	**3**	**5**
G.GPE.2.4	4. Use coordinates to prove simple geometric theorems algebraically. *For example, prove or disprove that a figure defined by four given points in the coordinate plane is a rectangle; prove or disprove that the point (1, √3) lies on the circle centered at the origin and containing the point (0, 2).*	0	2
G.GPE.2.5	5. Prove the slope criteria for parallel and perpendicular lines and use them to solve geometric problems (e.g., find the equation of a line parallel or perpendicular to a given line that passes through a given point).	0	2
G.GPE.2.6	6. Find the point on a directed line segment between two given points that partitions the segment in a given ratio.	0	2
G.GPE.2.7	7. Use coordinates to compute perimeters of polygons and areas of triangles and rectangles—e.g., using the distance formula.*	0	2
G.GMD	**Geometric Measurement and Dimension and Modeling with Geometry**	**9**	**11**
G.GMD.1	**Explain volume formulas and use them to solve problems.**	**2**	**4**
G.GMD.1.1	1. Give an informal argument for the formulas for the circumference of a circle, area of a circle, volume of a cylinder, pyramid, and cone. *Use dissection arguments, Cavalieri's principle, and informal limit arguments.*	0	2
G.GMD.1.3	3. Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems.*	0	2
G.GMD.2	**Visualize relationships between two-dimensional and three-dimensional objects.**	**2**	**4**
G.GMD.2.4	4. Identify the shapes of two-dimensional cross-sections of three-dimensional objects, and identify three-dimensional objects generated by rotations of two-dimensional objects.	2	4
G.MG.1	**Apply geometric concepts in modeling situations.**	**2**	**4**
G.MG.1.1	1. Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder).*	0	2
G.MG.1.2	2. Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot).*	0	2
G.MG.1.3	3. Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios).*	0	2
	TOTALS	**56**	**66**

are grade-level appropriate and completely configurable. For example, in a grade 6 assessment, the calculator would include basic four-function capabilities. In an Algebra II assessment, scientific, graphing, and regression calculators would also be available. Here, we describe the SAGE configurations. See Exhibits 7.3.1-14 and 7.3.1-15 for examples of these calculators.

AIR also allows students, teachers, and parents to download home versions of the online calculators (which are identical to the ones offered in the testing environment) to practice using the grade-level specific calculators. Once these are downloaded, an Internet connection is not required to use them at home, in the classroom, or in a lab.

The SAGE assessment items were written with these functionalities in mind. For example, in grade 6, a general four-function calculator is only allowed in one segment, as previously described. In grades 7 and 8, the scientific cal-

Exhibit 7.3.1-14: Basic Calculator



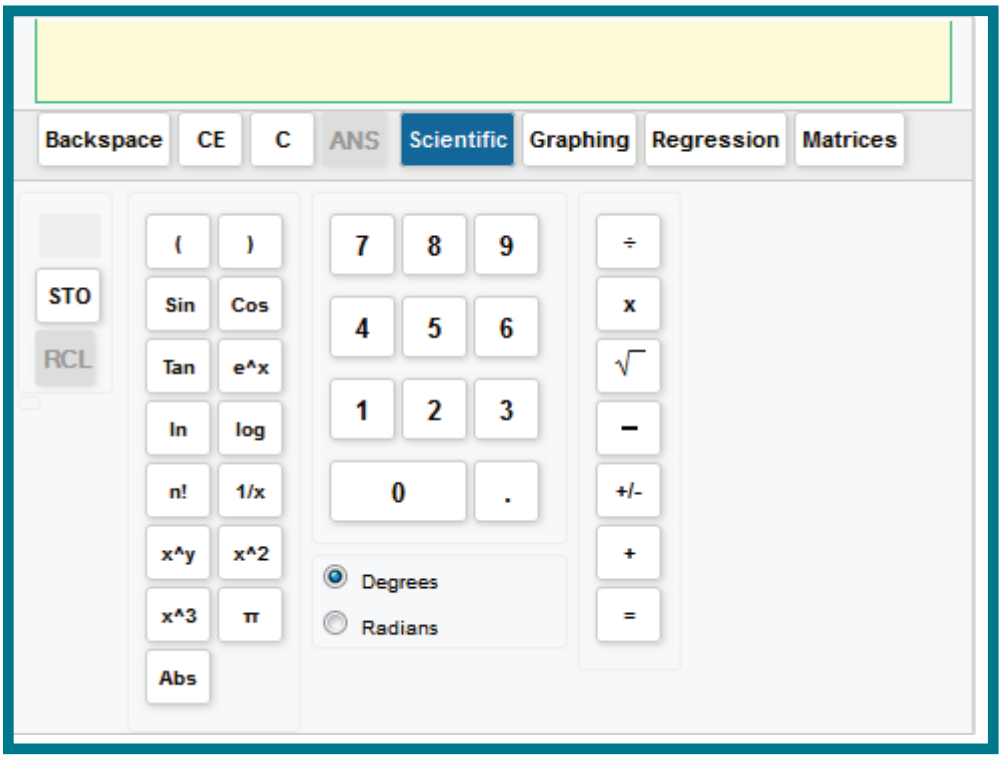
culator is allowed. And in high school courses, the scientific, graphing, and regression calculators are used by students to answer questions where the technology supports but does not replace their own thinking.

Special Versions

AIR will provide Braille and large print versions of these tests, as described in Section 7.3.11. Our online accommodations, which are the most complete in the industry, are described in Section 7.4.9.

We note that the SAGE and Smarter Balanced exams are ready for Braille delivery online, using technology invented at AIR. The interactive Braille option may be preferable if the Department chooses an adaptive approach.

Exhibit 7.3.1-15: Scientific, Graphing, and Regression Calculator.



AIR will deliver Braille and large print sample materials upon request, as described in Section 7.3.7.5.

Passage #1
The following is an online article about compulsory voting.
What Is Compulsory Voting?
Most democratic governments consider participating in national elections a right of citizenship. Some consider that participation at elections is also a citizen's civic responsibility. In some countries, where voting is considered a duty, voting at elections has been made compulsory and has been regulated in the national constitutions and electoral laws. Some countries go as far as to impose sanctions on non-voters.
Compulsory voting is not a new concept. Some of the first countries that introduced mandatory voting laws were Belgium in 1892, Argentina in 1914, and Australia in 1924. There are also examples of countries such as Venezuela and the Netherlands which at one time in their history practiced compulsory voting but have since abolished it.
43173
In the following paragraph from Passage #2, the author seems to contradict his own assertion about compulsory voting.
Select the sentence from the paragraph that contradicts his argument.
A country that forces its citizens to vote undermines the entire premise of political self-determination. Everyone should have the freedom to vote—or not vote—without the government's coercion. An electorate that comes to the polls of their own free will is one that represents a perfect sample of citizenry—motivated to make a difference, untainted by cynicism, and prepared to fully participate in the democratic process. Forcing people to the polls results in wasted votes, or
Question
these are considered informal votes, which fail to name any candidate. And no one will ever know how many votes were cast arbitrarily.
43175
Explain why the sentence you highlighted undermines the author's own argument.

Passage #2
The following is a blog post about a court case regarding compulsory voting in Australia.
All Anders Holmdahl wanted to do was express his political opinion by not voting. But the Australian Electoral Commission considers this an offense worthy of a fine and possibly even jail time. In Australia, citizens are required to go the polls whether they want to or not. Even if they find every political candidate objectionable, Australians must exercise their "right" to choose. Some, like Holmdahl, protest this injustice and are slapped with a fine. Others enter the voting booth and dutifully submit their ballots, naming the candidate they feel they can live with, dropping a blank vote, or in some cases, writing a message of protest about the unfair practice of compulsory voting—all of which is likely to skew election results.
A country that forces its citizens to vote undermines
44339
Read the following quote by former British Prime Minister Winston Churchill:
"Democracy cannot succeed unless those who express their choice are prepared to choose wisely."
Explain how Passage 2 supports this statement.
Type your answer in the space provided.

Item Type	Multiple Choice
Alignment to Common Core Standards for ELA	CCSS.ELA-Literacy.RI.11-12.7 Integrate and evaluate multiple sources of information presented in different media or formats (e.g., visually, quantitatively) as well as in words in order to address a question or solve a problem.
DoK	2
Rationale/Description	This item requires students to make an inference based on a text. In this item, students analyze data presented in a text and use the information to draw a conclusion.

Passage 1: Ready-Made Clothing
by National Institute of Standards and Technology
1 Before the American Civil War, ready-made apparel existed but its variety was limited. Coats, jackets and undergarments were only available in predetermined sizes. Most clothing was made by tailors, by individuals, or by their family members at home. The Civil War was a pivotal event in the historical development of men's ready-made clothing. At the outset of the Civil War, most uniforms were custom-made in workers' homes under government contract. As the war continued, however, manufacturers started to build factories that could quickly and efficiently meet the growing demands of the military. These factories were able to make uniforms for a fraction of the cost of home sewers. Mass-producing uniforms necessitated the

How does the mood change from the beginning of the story to the end of the story?
A From confident to hopeless

Math Items

Item Type	Hot Spot
Alignment (i.e., Standards)	3.MD.3. Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve one- and two-step "how many more" and "how many less" problems using information presented in scaled bar graphs. *For example, draw a bar graph in which each square in the bar graph might represent 5 pets*.
DoK	2
Rationale/Description	A typical DoK1 item for this standard might ask students to simply identify the bar graph which matches a table of given data. A DoK2 item like this requires more than basic recall and reproduction. In this case, students must interpret the context, establish relationships among given information, and construct their own bar graph. Further, there is no single solution. This open-ended item allows students to demonstrate their levels of understanding in ways that go beyond one particular solution.

Felicia is thinking of a decimal number.
• Rounded to the nearest tenth, this number rounds up.
• Rounded to the nearest hundredth, this number does not change.
Which could be Felicia's number?
A 6.705
B 7.685
C 8.590
D 9.544

Item Type	Equation Response
Alignment (i.e., Standards)	4.OA.1. Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations. 4.OA.2. Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.
DoK	2
Rationale/Description	Students interpret situations involving multiplicative comparison, an oft-difficult concept for fourth graders. Students create an equation to represent the multiplicative relationship and offer one possible set of solutions. As a constructed-response item, students go beyond identifying the solution—they create their own. Further, this open-ended item allows for multiple equations and an infinite number of solutions.

Item Type	Equation Response
Alignment (i.e., Standards)	F-BF.1.1 Write a function that describes a relationship between two quantities. F-TF.2.5 Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.
DoK	3
Rationale/Description	This item requires students to interpret data presented in the form of a graph. From this graph, students must recognize the function as a cosine function, as well as the various components of the cosine function modeled by the graph. Students go beyond basic recall of mathematical ideas. They **construct** their own function by interpreting and **analyzing** the key pieces of the graph, namely, the height of the axle, the diameter of the Ferris wheel, and the number of rotations per minute. These three key pieces of information are not explicitly stated by the graph; rather, students must determine them from the graph and then construct the function modeled by the graph. Thus, this is an example of a DoK3 item.

Alignment (i.e., Standards)	F-BF.2.3 Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $k f(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology.
DoK	3
Rationale/Description	After students have constructed a function which models the given animation and resulting graph, they **construct** a new function based on a different number of rotations per minute. In doing so, they **investigate** possible scenarios within the context of a safe Ferris wheel ride. Thus, this is an example of a DoK3 item.

7.3.2 Test Configuration

Our online tests are designed to be highly configurable. Readers are referred to Section 7.4.9.7 for some sample layouts and skins. We will work with the department to design the specific styles and select the layouts to be used on the Florida Standards Assessment (FSA). For paper tests, we propose to use consumable test booklets for the younger students and a separate answer document for the older students.

Section 7.3.2.1 provides a summary of the test and answer document design for paper-based tests (PBTs). Please see Appendix B for the Materials List.

7.3.2.1 Test and Answer Document Design

AIR, along with team member DRC, will work closely with the Department to develop accurate and engaging materials and create aesthetically appealing test materials that appropriately address the rigorous quality requirements of the Department. Non-scannable test booklets will be designed and developed by AIR, with print-ready files provided to DRC for printing and distribution. Please see Section 7.3.7.4 for a detailed discussion of AIR's materials design and production procedures and Section 7.3.8 for more information on DRC materials production and printing. For scannable test booklets and scannable answer documents, AIR and DRC will partner to produce materials that are compatible with DRC's image scanning systems (please see Section 7.5.3 for more information on DRC's image scanning technology and processes).

AIR and DRC will ensure that the answer documents, test booklets, and other test materials are provided in appropriate formats to schools and districts. The formats will maximize security and functionality. AIR and DRC understand that we will also provide supplemental assessment materials, including secure FSA Reading passages booklets, available by special request for up to five percent (5%) of the students taking computer-based tests (CBTs); blank four-page work folders for all students taking the FSA Mathematics CBTs, with the fourth page containing a full-page grid; blank two-page worksheets for all students taking the FSA English Language Arts/Literacy (ELA/L) CBTs; and reference/periodic table sheets, as appropriate. AIR and DRC understand that work folders, worksheets, and reference/periodic table sheets will not be numbered or inventoried, rather they will be destroyed by the districts/schools after test results have been delivered. AIR and DRC will ensure that the Department receives error-free products. Please also see Section 7.4.7 for more information on other ancillary test administration materials that will be provided by AIR and DRC. Appendix B provides AIR's and DRC's proposed Materials List for the FSA.

Test Booklets

For PBTs and for the regular print paper versions of the CBTs, AIR proposes using consumable (scannable) test booklets for grades 3 and 4 and non-scannable test booklets for all other grades and subjects. Corresponding scannable answer documents will be developed to correspond to the non-scannable test booklets. Scannable test booklets for grades 3 and 4 will be printed 8 ½" x 11" on 60# reflective stock.

AIR will work with the Department to produce the test booklets. Once test booklets have received final approval by the Department, AIR will provide the final print-ready files to DRC for printing. The Department will approve the answer documents prior to printing. DRC will also develop Braille (contracted and uncontracted), large print, and one-item-per-page (OIPP) versions of test booklets; please

see Section 7.3.11 for a discussion on special format materials production.

The test booklets will be color-coded by grade and subject area. The color scheme for test booklets will be duplicated across corresponding answer documents and test administration manuals. The test booklets will be customized to show the name of the assessment program, the Department logo, the form name, grade, subject, and a place for adhering student Preidentification (PreID) labels. As appropriate, test booklets will be divided into sections that will be administered either on the same day or on consecutive days. AIR is open to discussing alternatives for test booklet and answer booklet design with the Department upon contract award.

DRC will ensure that all printing of test booklets adhere to strict quality control procedures. Materials will be packaged and shrink-wrapped in set and subset quantities specified by the Department and secured so that each student is the first to open a booklet. For a full description of DRC's materials packaging and distribution processes, please see Section 7.4.1.

Image Scannable Answer Documents

After the non-scannable test booklets have been finalized, separate customized, scannable answer documents will be created, developed, and printed. Answer documents will be color-coded to match test booklet and manual colors, as appropriate. AIR and DRC will work with the Department to design the scannable answer documents. DRC's custom-designed answer documents will feature a light background grid and light background lines on the response area for constructed-response and essay items, as well as directions to help students easily navigate between the test booklet and the answer document. In particular, AIR and DRC recommend that each constructed-response and essay item be clearly marked in the test booklet as to the exact location where students should respond in the answer document, along with instructions after the student response area directing students to return to the appropriate page in the test booklet. Incorporated into each answer document will be a specially created section for adhering student PreID labels, which contain student identification and demographic information. Please see Section 7.4.8 for more information on AIR's PreID process for the FSA.

The answer documents will be designed, produced, and printed to fully support test administration and DRC processing and scanning technologies and systems. The Department will approve the answer documents prior to printing. The scannable answer documents will be printed 8 ½" x 11" on 60# reflective stock for all grades (except grades 3 and 4, which will use scannable test booklets) and content areas.

Exhibit 7.3.2.1-1 summarizes the assumed document design for the PBTs. We recognize that even for CBT paper versions will be necessary for up to 5 percent of the population.

The ITN specifies four additional materials to accompany paper tests:

- Security-controlled booklets containing passages
- Blank work folders for Mathematics
- Blank work folders for ELA
- Copies of appropriate reference sheets.

AIR can provide all of these in hard copy, and we have included this price as an option in our bid. Our base bid, however, includes only the blank work folders for Mathematics, which provide scratch paper for students working on math problems. Our online system provides well-proven, secure alternatives for the other documents.

Our system includes *secure print on demand,* which enables the test administrator to print the passage at which a student is looking if (a) the student has an accommodation set to allow this (or it can be offered to all students); and (b) the student presses the request button. Secure print on demand prints a unique identifier on the document, so that the documents can be collected and inventoried. The system prints a cover page on the top and the bottom of the requested passage to ensure that it is not viewed by the test administrator (TA) or others. The cover page identifies the student who should receive the printout. This approach is particularly powerful if the Department chooses an adaptive option, in which students might receive a wide variety of passages.

We offer several notepad options that students can use while taking the ELA tests. The system can be configured to offer a single notepad that persists across items for the duration of the testing session or a separate notepad for each item, again persisting for the duration of the testing session. These note-taking options have proven sufficient, and we have not received requests for hard-copy work folders for ELA tests.

The online system can supply online reference sheets, customized to the Department's specifications. At the Department's request, we can make these printable from the TA workstation.

We reiterate that we have included the option to have these hard-copy documents provided in addition to the online version, if the Department so chooses.

We are happy to work with the Department to modify any configurations of our online testing system, within the highly flexible boundaries of our system's configurability. These configurations may be modified at Department direction each administration year within the scope of this contract with sufficient notice to be negotiated with the schedule.

7.3.3 Develop Items

Introduction

AIR's structured process follows specific and proven protocols designed to produce high-quality assessment items from the development of the item specifications documents to the items becoming operational. In section 7.4.9 we describe the many types of machine-scored constructed-response (MSCR) items that we currently support, in addition to selected-response and human-scored constructed-response items. Our test developers have the tools they need to provide a wide variety of cutting-edge, technologically advanced items that are cognitively demanding, psychometrically sound, and scored instantaneously using rubrics created by our test development staff.

As we will describe in this section, AIR has a comprehensive, structured development process to ensure the highest quality of developed items. We have the industry's richest repertoire of item types and machine-scoring engines. Our test developers are empowered with tools to create these sophisticated items independently. They are supported by our Item Tracking System (ITS), which structures and manages the test development process, implementing quality assurance (QA) procedures at every step. Our proposed team brings years of assessment and instructional experience, including our work with Utah's Student Assessment of Growth and Excellence (SAGE) assessment as well as with the Smarter Balanced Assessment Consortium (SBAC).

Item development quantities will depend on several policy decisions to be made by the Department. Our base bid includes the development and field-testing of 75 items per grade/subject, with separate development of writing performance tasks. Our bid also

includes a priced option for additional development at the Department's discretion.

Item Development Process

AIR's content development process is managed by our Item Tracking System (ITS), which fills the following three critical roles:

1. Content development and management tool
2. Item bank
3. Publication system supporting both paper and online publication

ITS is a full-featured, customizable item content management and banking system that enforces agreed-upon item review levels throughout the development process. This item development workflow leads items from inception, through a series of content, fairness, graphic, and other reviews to final publication. The system captures the outcomes and rationales at each review and maintains previous drafts of each item. The workflow management ensures that each item receives each review in the designated sequence, and that the review is conducted (or recorded in the case of committee review) by an authorized person. Every version of every item is archived, along with each comment received in any review. Reviewers have immediate access to all older versions providing version control throughout development.

ITS allows remote Internet access by item writers and reviewers and by our clients while ensuring complete security with individualized passwords for all users, limited access for external users, and strong encryption of all information.

Upon publication, the ITS tracks the item's use on a form or in an adaptive item pool. After items are used, ITS stores the resulting statistics, including exposure statistics, classical item statistics, and statistics based on Item Response Theory (IRT).

Here, we present the process in more detail by describing our ITS and explaining how it will be used to manage the item development process effectively. Our item development process is predicated on a high level of interaction with our clients, and below we describe how ITS manages the workflow and maintains records about item development that meet the Department's requirements.

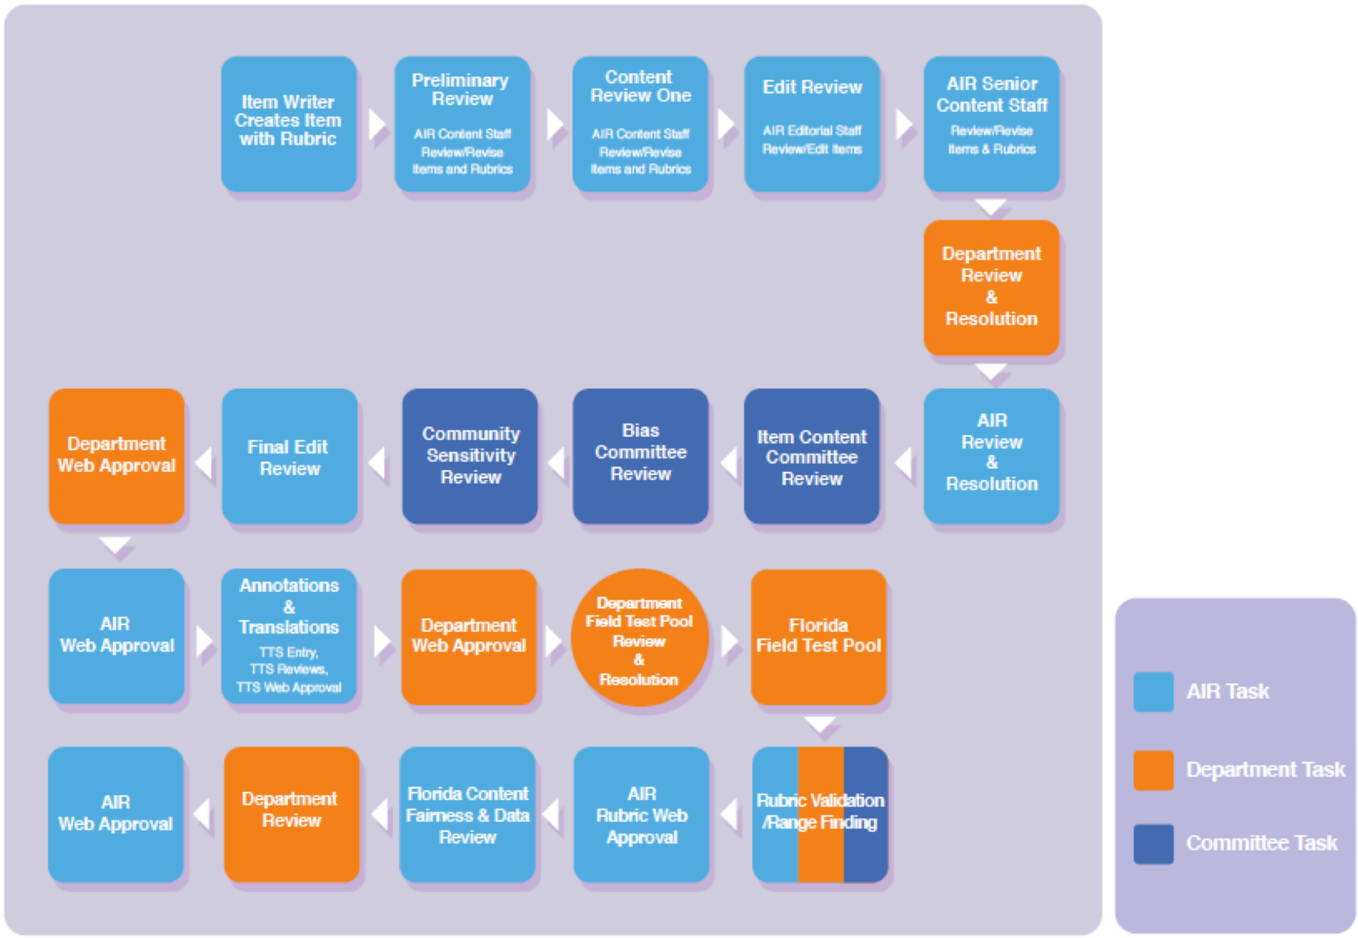
AIR's ITS is a full-featured, customizable item content management and banking system, which enforces agreed-upon item review levels. Preparing online tests allows a workflow that moves an enormous amount of work off the critical path, allowing analogs of reviews to take place even before the forms are constructed. For example, cover art, layouts, and other styling are determined in advance and can be viewed in ITS and the test delivery system well in advance of form construction.

ITS ensures that every item follows through the entire sequence of development and provides clients and AIR management on-demand reports of the content and status of the inventory of items. Each item is shepherded through a sequence of reviews (described in this section) and signoffs before it is locked for field-test or operational administration.

As we will discuss in this section, ITS is integrated with the item display engine used by our test delivery system. This feature, combined with our unique "web approval" process allows the display of online items to be "locked" well before forms are built, taking the "blackline" process off the critical path for online tests. Reviewers can look at the items exactly as they will appear to students and "lock" them for publication in exactly that format.

Exhibit 7.3.3-1 summarizes our item development sequence, which can be customized to support unique requirements in Florida.

Exhibit 7.3.3-1: Item Development and Review Sequence



Item writing

AIR's experienced and multitalented staff has worked with many projects including SAGE, SBAC, and many other state assessment contracts. AIR's item writers have at least a bachelor's degree in the content area for which they will be writing items, and many of our item writers have advanced degrees. Item writers produce their best items when they understand the cognitive capabilities of the students in the grade level for which they are writing. Therefore, when giving assignments to item writers, we are careful to match the expertise of the writer, as defined by either previous item writing experience or teaching experience, with the grade level(s) with which he or she has the most familiarity.

Additionally, AIR ensures that item writers have a full understanding of the response mechanisms described above. In order for item writers to use our tools to the fullest potential, those writers must be well grounded in our latest technologies. We take time to thoroughly train item writers, ensuring that they have the background knowledge needed to develop items and rubrics that our test development staff can easily build upon and refine throughout the review process.

AIR will recruit a sufficient number of item writers to ensure variety and quality in the development process. We will provide the Department with the resumes of our item writers prior to development. It is critical that item and passage writers have a full under-

standing of the assessment for which they are writing. We therefore encourage the Department's participation in item/passage writer trainings. We will work with the Department to develop training materials that address not only the item/passage/test specifications but that also cover any additional Florida-specific guidelines and incorporate any specific Department preferences. For example, we understand that the acceptable topics for passages might vary from region to region based on cultural, religious, and political views. We will work closely with the Department to ensure that our writers have all the information they need to develop the quality content that Florida's educators expect.

Writers can access ITS from any computer with an Internet connection. This is ideal for two reasons: 1) it gives writers the flexibility to work from any place of their choosing (e.g., home, office, library), and 2) it allows AIR access to the best writers in the country.

When drafting items in ITS, writers are provided the complete texts of the target standards and complexity level on the left side of the screen. On the right side of the screen, the writers are presented with a type-specific item template that has sections for each item component (e.g., stem, answer choices). These templates offer all of the common features of word processors (e.g., spell check, formatting) and provide structure to the writers.

ITS offers item developers the ability to independently create imaginative, technologically advanced items to measure deep knowledge.

Introduction to AIR's Machine-Scored Constructed-Response (MSCR) Item Development Tools

AIR's MSCR item development tools put the power of both item and rubric creation into the hands of item writers. Below, we provide some screenshots and brief descriptions of a few of these tools to help reviewers understand the power and flexibility available to our test developers.

Exhibit 7.3.3-2 presents a shot of the first screen that our test developers see when they design a graphic-response item. Students can respond by drawing, moving, arranging, or selecting graphic regions. The scoring rubric allows for each answer to be scored using scoring logic created by the item writer.

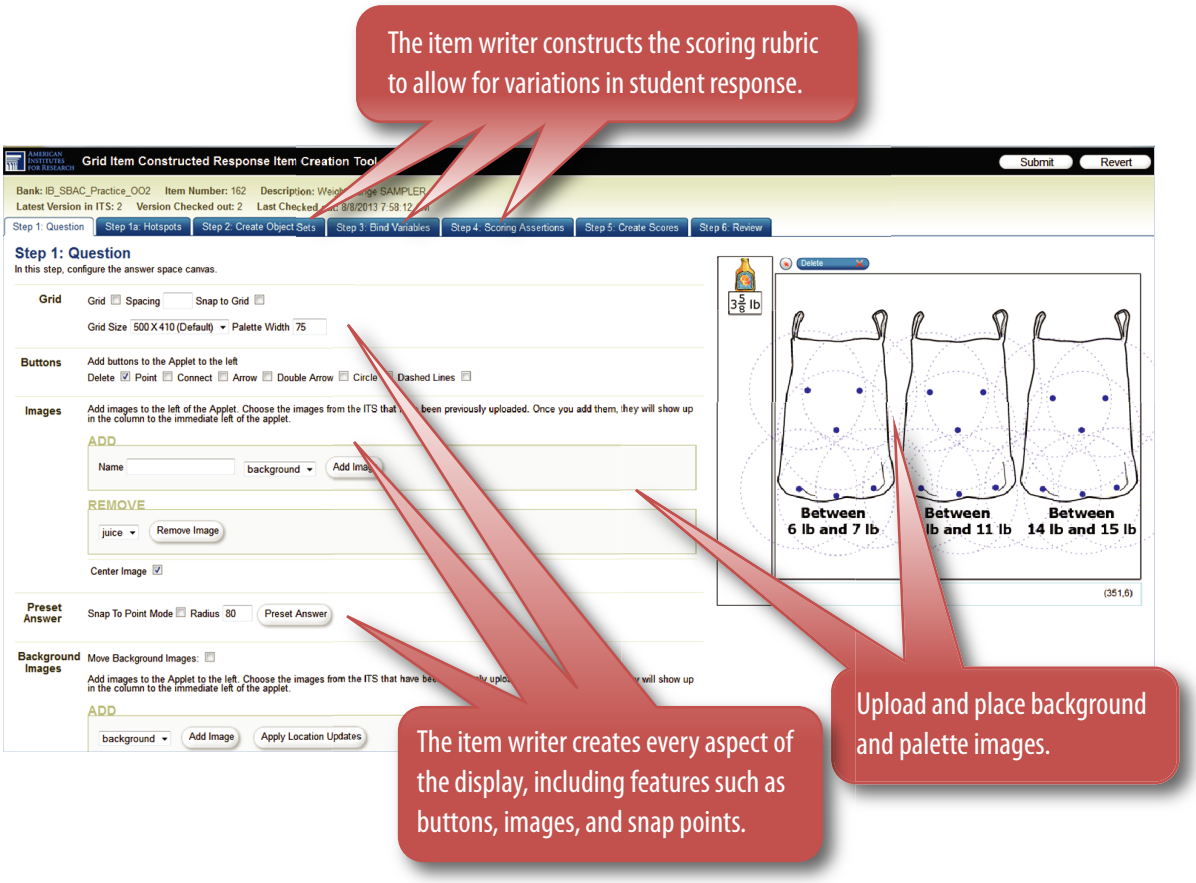
Test developers have utmost flexibility to identify features of student responses to score. These features are not simple (e.g., whether the correct object is put in the correct place) but can involve abstraction. For example, if a student is asked to design an experiment, the rubric can discern whether the objects representing the experimental variable actually vary across conditions or cover the range of inquiry, among other capabilities. These concepts are abstracted and many different responses may reflect those abstract features. This ability enables our machine rubrics to "justify" the partial credit assigned in terms of the skills that particular response features exemplify.

Exhibit 7.3.3-3 shows the fourth screen the test developer sees and shows how our system allows for many different responses.

As shown in Exhibits 7.3.3-1–7.3.3-3, the tools provide the ability to test responses a student might offer in order to evaluate the rubric. This capability is available to test developers throughout the review process. The test developer can test the scoring rubric and make corrections to the scoring logic instantaneously.

At any point in the review process, item writers can make changes to the rubric's scoring logic instantaneously. Those changes can be tested immediately by scoring the item in the Review section of the tool. Exhibit 7.3.3-4 shows this scoring capability.

Exhibit 7.3.3-2: Graphic-Response Item Development Tool



When creating equation items, our test developers have access to the Equation Editor tool. Student responses can be simple numeric responses or complex equations or even sets of equations. This tool allows for multiple answers and the development of multistep items. As shown in Exhibit 7.3.3-5, test developers can customize the equation palette to show the appropriate functions. Just as the key pad is customizable, the answer spaces are as well. Additional answer spaces can be added as needed by the item writer. The scoring rubric allows for each answer to be scored using scoring logic created by the item writer. This shot shows how the test developer can customize the keypad and answer spaces for different items.

The Simulation Tool (see Exhibit 7.3.3-6) allows our test developers to independently create sophisticated simulations and to define rubrics that evaluate the examinee's sequence of interactions with the simulator. Their sequence of choices and interactions can be scored by the application of scoring logic within the scoring rubric. The item writer creates inputs, animations, and outputs that give the student an opportunity to create their answer. As with the other item types, if the interactions are to be scored, the test developer can point and click his or her way to a scoring rubric that is abstracted from the specific details of a given response to the underlying features that reflect the knowledge or skills.

Exhibit 7.3.3-6 shows how the test developer creates the inputs and animations used in simulation items.

Exhibit 7.3.3-3: Graphic-Response Item Development Tool

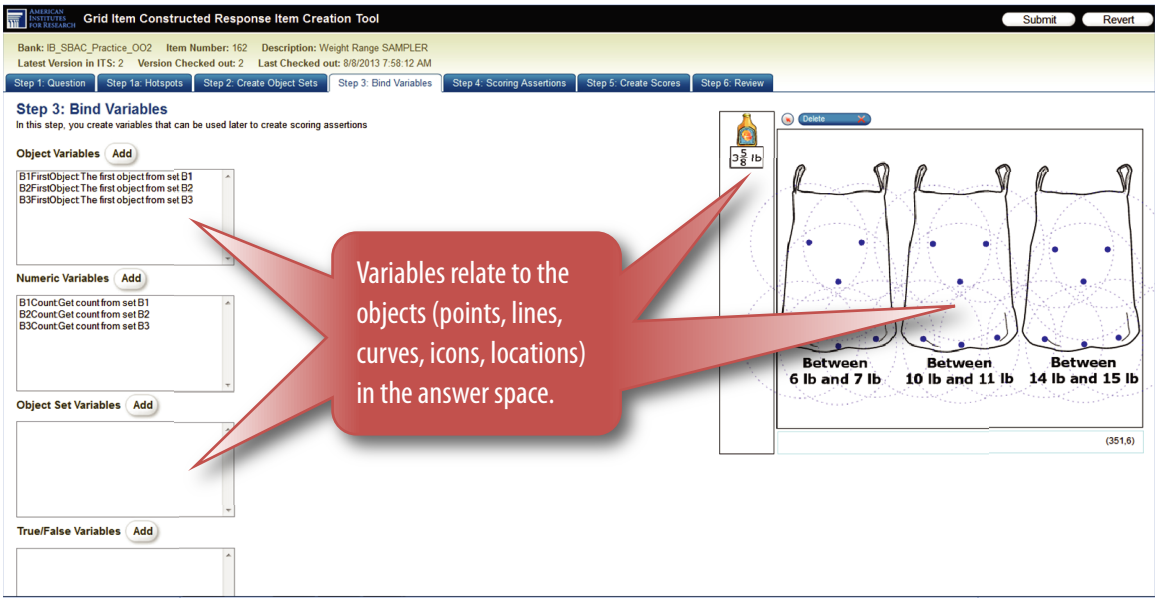


Exhibit 7.3.3-4: Graphic-Response Item Development Tool

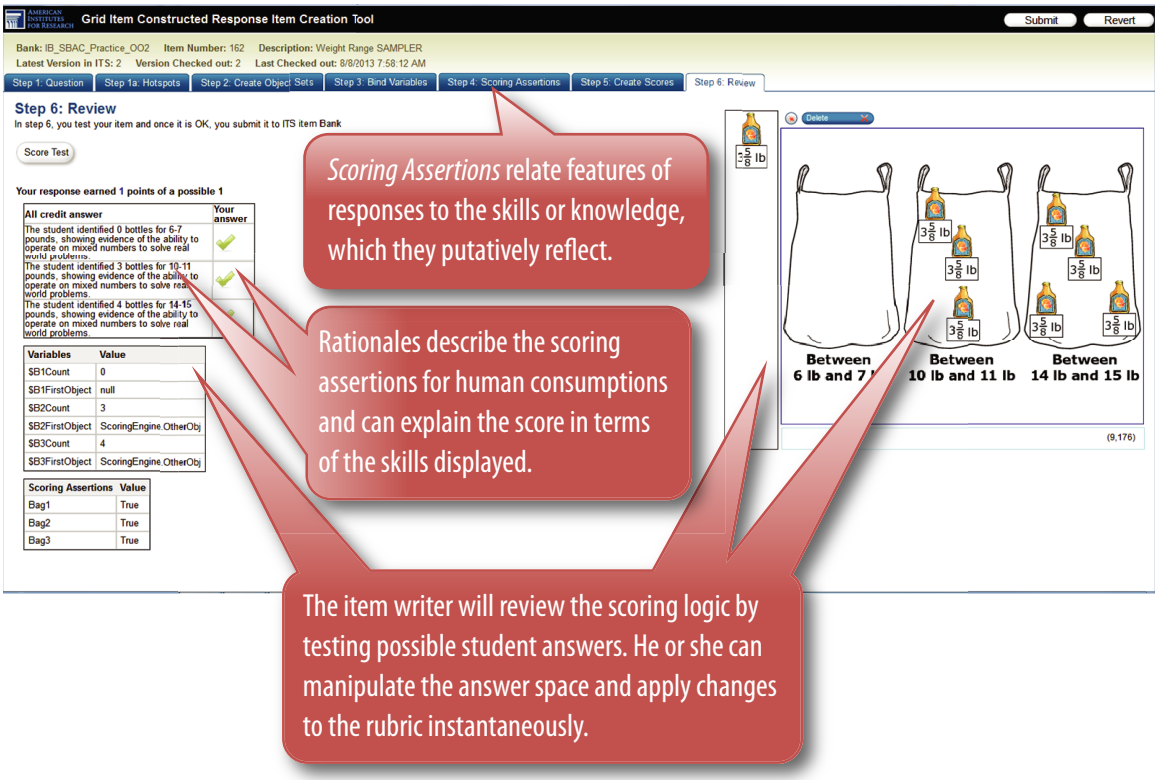

Exhibit 7.3.3-5: Editor Equation Tool

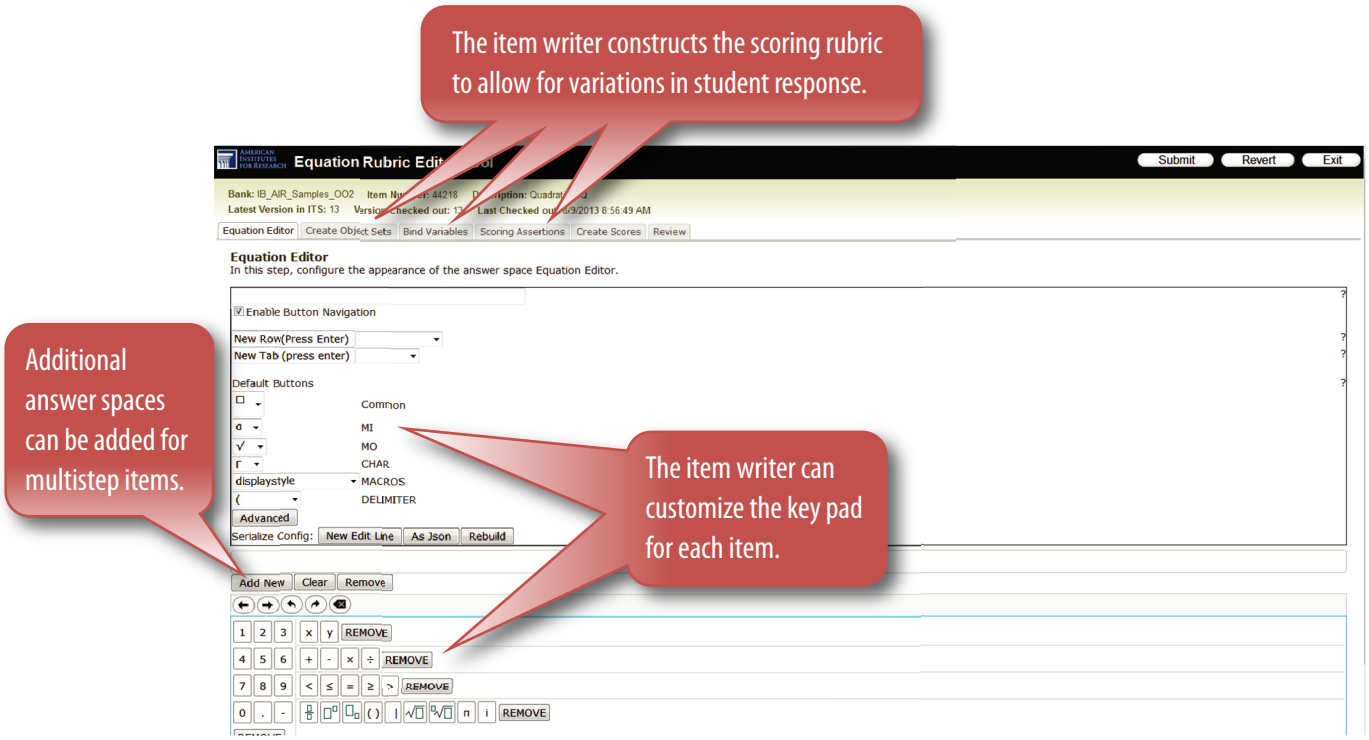

Exhibit 7.3.3-6: Simulation Tool

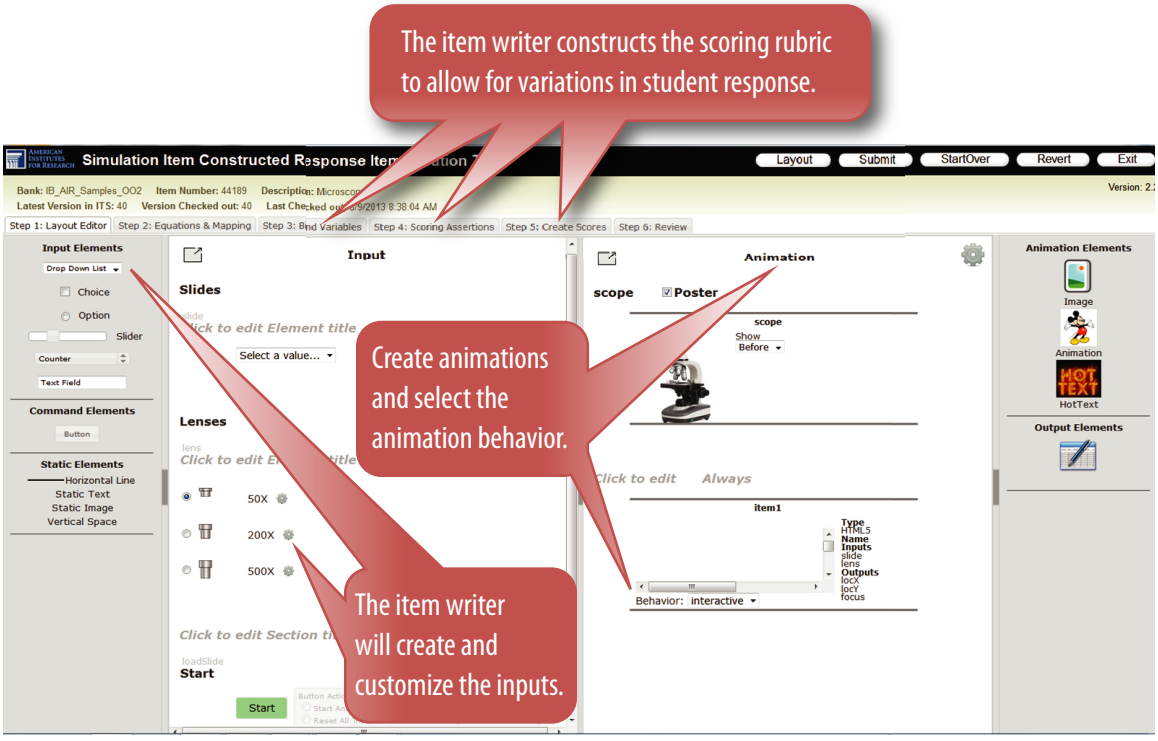


These tools, along with many more, are integrated into ITS, providing our test developers the power and flexibility to use technology to create sophisticated items. We encourage our test developers to use these tools to create true MSCR items.

Item and Passage Review

AIR reviews items through a structured sequence of reviews. Although the exact sequence of reviews varies across programs, all our review processes include content reviews; language accessibility, bias, and sensitivity reviews; editorial reviews; and lead developer approval. ITS ensures that each review is complete before an item can make the transition to the next level of review. ITS captures every comment and revision to an item by requiring reviewers to enter annotations and preserving every version.

During the content review process, reviewers ensure that the attributes associated with an item accurately reflect the item content. Reviewers focus on each item's match to its item specifications as well as on each item's content and structure. Reviewers also check every item against its alignment to the academic standards to evaluate the correctness of the alignment. They make sure that the item and related materials comply with AIR's guidelines for clarity, style, accuracy, and appropriateness for the population being assessed. For a constructed-response or technology-enhanced item, the specialists study the item's presentation to ensure that it yields a clear response and check the scoring guide to make sure that it adequately accounts for all possible responses. For a multiple-choice item, the reviewers study the clarity and importance of each question, check that the correct response answers the question posed, and ensure that the incorrect options are indeed incorrect. In all cases, the reviewers pay special attention to the quality, equity, and accuracy of the item, as well as to any manipulatives that form an integral part of items in some content areas and to tasks and items intended for students who take alternate assessments.

The reviewers then accept the item and classification as written, make revisions, or recommend that the item be discarded. Whatever their recommendation, ITS stores the rationale and, if an item is revised, archives the older version(s).

Before the Department content staff and committees review an item, AIR's lead item developer for the content area must indicate approval. The lead item developer will consider all aspects of the item and related materials for content, language accessibility, bias, sensitivity, and editorial issues, referring to the item's history through ITS as appropriate.

AIR has one of the industry's most thorough and rigorous processes for item and passage review. The sections that follow describe our typical review process at each stage. This is the review process AIR implemented in the development of items for both the SAGE and SBAC assessments. We understand that it is the Department's intent to develop new items in subsequent years to embed in future field tests. The following sections describe the review process we propose for all new Florida Standards Assessments items as well.

Preliminary Review Process

During the preliminary review process, AIR's test developers review items either individually or as a group. AIR finds the group process beneficial because the exchange of ideas and open discussion generally yield items that are clearer, more precise, and better aligned to the academic standards.

AIR has developed an internal review process that aligns with the Department's expectations for quality item development. At every stage of

the item review process, beginning with preliminary review, test developers analyze items to ensure that

- the item aligns well with the Florida Next Generation Sunshine State Standards;
- the item matches the item specification for the target being assessed;
- the item is based on a quality idea—i.e., it assesses something worthwhile in a reasonable way;
- the item is properly aligned to a DOK level;
- the vocabulary used in the item is appropriate for the grade/age; subject matter; and considerations of language accessibility, bias, and sensitivity;
- the content is accurate and straightforward;
- the graphic and stimulus materials are actually necessary to answer the question;
- the stem is clear, concise and succinct, meaning it
  - has enough information to know what is being asked;
  - is stated positively (and does not rely on negatives—such as no, not, none, never—unless absolutely necessary); and
  - ends with a question.
- for selected response items, the set of response options are as succinct and short as possible (without repeating text), meaning they are
  - parallel in structure, grammar, length, and content;
  - sufficiently distinct from one another;
  - all plausible (but with only correct option); and
  - ordered by length.
- there is no obvious or subtle cluing;
- the score points for constructed-response items are clearly defined; and
- for MSCR items, the items score as intended at each score point in the rubric.

When reviewing MSCR items and performance-based assessments, the test developers review these items in ITS web preview, which allows them to see the item as it will be rendered for students in the online testing environment. Test developers interact with each item to verify that it directs the student to a clear understanding of the task, allows the student to provide a coherent response, and contains scoring guidelines that adequately account for all logical responses.

Based on this meticulous review of each item, the preliminary reviewers accept the item and classification as written or revise the item, attributes, or classification or all three.

Another alternative is to reject the item because it is too problematic in content or does not align to any standard, or both. Whatever the recommendation, the review comments are noted in ITS, and if an item is revised, its previous version is automatically archived.

Content Review One

Content Review One is generally conducted by an individual test development specialist, rather than as a group review. The Content One reviewer carefully examines each item based on all the criteria above. In most cases, he or she plays a more senior role on the content team and brings more years of knowledge and experience to the review. This reviewer approaches the item both from the perspective of the Department's guidelines as well as his or her own experience in test development.

Content Review One is where items are checked to ensure that the revisions made at the preliminary review step did not introduce errors or content inaccuracies. The Content One reviewer looks at all aspects of the item and reviews the comments saved in ITS from

the preliminary review to verify that any issues noted there have been adequately addressed.

Edit Review

AIR editors will review every item for clarity, correctness, and appropriateness of language for the grade level assessed and conformity with acceptable item-writing practices. Editors ensure clearly worded, understandable, and fair presentation of items, instructions, and administrative documents. The editorial process is related to, but separate from, the item development process so that editors can look at the items objectively.

Editors have numerous tasks. First, editors perform basic line editing for correct spelling, punctuation, grammar, and mathematical and scientific notation, ensuring consistency of style across the items. AIR editors have adopted standard reference resources, using *Merriam Webster's Collegiate Dictionary* (11th edition) and *Webster's Third International Dictionary, Unabridged* for spelling and capitalization; *Associated Press Stylebook and Briefing on Media Law* for usage; *Words Into Type* for grammar; and the *Publication Manual of the American Psychological Association* for reference citations. Subject-specific reference sources include *Webster's New Biographical Dictionary and Webster's American Biographies; The Harvard Dictionary of Music; Janson's History of Art; Webster's New Geographical Dictionary; Dorland's Illustrated Medical Dictionary; Mathematics Dictionary* (James and James); *Scientific Style and Format: The CBE Manual for Authors, Editors, and Publishers* (Council of Biology Editors); and *The Macmillan Dictionary of Measurement*.

AIR will use the Department's style guides that synthesize frequently used and assessment-relevant information that addresses such test-specific issues as numerals, abbreviations, symbols, and terminology. AIR editors have become very familiar with the Department's preferred format and style.

Second, editors ensure that all items are accurate in content and will query the item developer when questions arise. The editors compare reading passages against the original publications and make sure that all information is internally consistent across stimulus materials and items, including names, facts, or cited lines of text that appear in the item. The editors ensure that the keys are correct and that all information in the item is acceptable and correct. For example, editors verify common facts (e.g., the diameter of Earth, the scientific name of the fruit fly, the correct spelling of *Far from the Madding Crowd*, the formula for calculating the volume of a cube, the proper use of the semicolon, and the dates of the Civil War). Mathematics assessments present a specific challenge because of the potential for transposing numerals and the difficulty of identifying computation errors by sight. Therefore, our editors perform all calculations to ensure accuracy.

Third, AIR's editors review all material for fairness and language accessibility issues. Although external committees and the lead item developers look at all material, editors raise questions before the material reaches the committees and then recheck all material that undergoes any changes.

Finally, our editors confirm that items reflect the accepted guidelines for good item construction. For example, in Mathematics items, they ensure that options given with calculator-active items reflect errors in thinking, not errors in calculator use. In all items, they look for language that is simple, direct, and free of ambiguity with minimal verbal difficulty. Editors confirm that a problem or task and its stem are clearly defined and concisely worded with no unnecessary information. For multiple-choice items, editors check that options

are parallel in structure and fit logically and grammatically with the stem and that the key accurately and correctly answers the question posed, is not inappropriately obvious, and is the only correct answer to an item among the distractors. For constructed-response items, editors review the rubrics for appropriate style and grammar.

Senior Review

We seek to deliver innovative, complete, and high-quality items to the Department. A subject area content lead must sign off on the overall quality, including content, fairness, language accessibility, and style before it is deemed ready for Department review. Senior reviewers are generally AIR staff who work closely with their Department counterparts and are keenly aware of the specific expectations for item content and quality.

By the time an item arrives at the senior review level in ITS, it has been thoroughly vetted by both content reviewers and editors. The senior reviewer looks back at the item's entire review history, making sure that all the issues identified in that item have been adequately addressed. For MSCR items, the senior reviewer carefully checks the rubric and scoring logic by responding to the task in ITS web preview just as the student would in the testing environment. He or she checks full-credit, partial-credit and no-credit responses to verify that the scoring is working as intended. The senior reviewer verifies the overall content of each item, confirming its accuracy, alignment to the standard, and consistency with the Department's expectations for the highest quality.

Client Review and Resolution

The department review is a critical step in the overall quality and adequacy of the assessment. AIR will deliver newly developed items in batches to allow our test development specialists to calibrate these items to the expectations of the Department reviewers. The initial batches will contain items that target a representative sample of the standards, item types, and DOK. After the initial batch delivery, the item distribution across the content and DOK in subsequent batches will vary according to the item development plan.

After we receive feedback for each item batch, our test development specialists and Department staff will hold a conference call to discuss the Department's comments and finalize revisions.

Committee Review

Each item and passage will be reviewed by a committee of Florida's stakeholders. AIR will document those reviews in ITS as items move through the review sequence. Section 7.3.4 provides greater detail about the committee review process.

Annotation of Items for Accessibility

One feature of Florida's Next Generation testing systems is their focus on accessibility for all students. One of the elements critical to our success has been the ITS workflow that supports the embedding of accessibility markup into each item as it is being developed, rather than as a post-hoc process applied to completed test forms. The development of transcription notes (a process that we call "tagging" for web-delivered items) proves most tractable when it is done upon approval of the base item. That way, tagging is accomplished (and reviewed by the Department) on a flow basis, rather than requiring the review of thousands of items at the same time.

Currently our tagging capabilities include translation, text-to-speech, Braille, sign language, and word lists or glossaries (which may be multilingual).

Tagging Process

Once items have been vetted by Florida's committees and approved by the Department, they are eligible to move into the annotation phase of development. Here, items can have text-to-speech (TTS) and text-to-Braille features added, among others. AIR's team of TTS specialists put the items through a series of review steps to ensure the annotations are clear and precise. Once the annotations have been created and reviewed internally by AIR, the Department will have the opportunity to review the annotations and confirm them.

In addition to text-to-speech and text-to-Braille, items can be associated with a variety of accessibility tools and accommodations that can be delivered to students automatically based on their profile. Online delivery of AIR's assessment system ensures that students can take a test individualized to meet their needs.

Some accessibility features are completely handled by the test delivery system, without any special changes to content. For example, items can be "zoomed" or "magnified" without special preparation of the content. Other features require annotations, which must be added as part of the content development process. Accessibility features requiring annotations within the content include:

- **Spoken Presentation of Items and Passages**—Reading text-based content and providing descriptions of visual material such as figures, graphs and maps, through TTS.
- **Braille**—Tactile presentation of text-based content and visual materials such as figures, graphs, and maps through a refreshable Braille display, screen reader (JAWS), and embosser. Both contracted and uncontracted Braille, as well as Nemeth Braille, are supported.
- **Signed Translation (ASL)**—Text-based content is presented in American Sign Language and/or Signed English.
- **Language Translation**—Presentation of items and passages, including figures, graphs, and maps, in select languages displayed next to the English version.
- **Glossaries and Word Lists**—Feature that allows students to view glossary terms for a specific word or phrase. A glossary may present information in English or in an alternate language.

Final Client Signoff

Once the full complement of annotations is complete, we have a final "web approval" phase in which our clients see the final product displayed as it will render to the students. At this phase, clients can approve an item, request revisions, or reject the item. This final signoff is analogous to a blueline review but includes the review of general and special versions.

AIR implements a host of quality procedures after this final signoff. Readers are referred to Section 7.3.9 for a discussion of these processes, which include review of each item on each platform.

Intended Development

For pricing purposes, AIR has assumed that we will develop 75 items per grade/subject each year. Of course, this figure will depend heavily on Florida's preferred plan for administration, how tightly coupled Florida would like to remain with the base test, and other factors. We propose to establish a target in negotiations, should the Department choose to negotiate with us.

7.3.4 Review Meetings

Introduction

Florida engages its educators and stakeholders in the test development process through a series of committee reviews designed to ensure that the test, blueprint, items, and passages all accurately measure the intended construct, and does so in a way that is fair to all students and respects community sensitivities. In a typical development year, these committees are engaged as the items are developed.

The test to be delivered in 2015 presents a slightly different situation. Timelines dictate that the items to be used in the 2015 assessment will come from a third-party source. Here, we have proposed to use items from Smarter Balanced Assessment Consortium or the Student Assessment of Growth and Excellence (SAGE).

The fact that these items already exist and were independently developed to measure the Common Core State Standards (CCSS) does not eliminate the need to ensure that they conform to Florida's expectations. Each of the proposed item banks is large because it is designed to support an adaptive test. This means that the bank is large enough to select items from it for use on fixed forms, or to eliminate unacceptable items even if the test is adaptively administered.

In preparation for the 2015 test, we propose to engage the Florida committees in the development of the test blueprint (if the Department chooses not to adopt the SAGE or Smarter Balanced blueprint), and the selection of items. In subsequent years, we propose to engage the committees in their usual roles in the development process.

As detailed in Section 7.3.1, the bank developed for SAGE contains approximately 300–500 items per subject per grade (grades 3–11 and End-of-Course Mathematics). The items in the bank consist of items developed to measure Common Core State Standards (CCSS)—reading, writing, language, listening, and math. AIR's proposal will enable Florida to select fixed forms or review and approve the pool for an adaptive pool. The pool will be robust and provide ample opportunity for Florida's Content and Fairness committees to review the selection.

As stated in the ITN, the Department will select participants for committee meetings. Once appointed, AIR will coordinate with the Department and secure contact information and a description of each committee member's background. AIR will maintain all committee forms (e.g., reimbursements, evaluations, non-disclosure agreements) and will make these forms available to the Department upon request.

AIR will work with the Department to select a city in which to hold the committee meetings. The cities selected, probably Jacksonville, Tallahassee, or a location in central Florida, will be ones that are easily accessible by a majority of participants. AIR will then invite the committee members to the meetings and make all necessary travel and hotel arrangements.

AIR will be responsible for all materials needed for the meetings. AIR will prepare and ship hard copy booklets and also will be prepared to provide calculators, dictionaries, and any other reference materials the committee may need. Throughout the meetings, AIR will maintain the security of test items. AIR proposes that all passages and items will be printed on light green paper, making them instantly recognizable as secure materials. All materials will be monitored throughout the meetings and stored in locked areas when they are not in use. Additionally, since the Item Tracking

System (ITS) can only be accessed through a secure login, passages and items being reviewed online also will be secure. AIR will work with the Department to provide general test security guidelines to the committees prior to passage and item review meetings.

7.3.4.1 Bias and Sensitivity Committee Reviews

AIR standards require that tests exclude items that disadvantage examinees of different races, genders, ethnicities, regions, handicapping conditions, or language background. Further, the standards require documentation that such disadvantage does not occur. (Note that this does not imply that all groups perform equally well on all items, but rather that any systematic differences are due to differences in the proficiency levels of the groups on the targeted trait.)

AIR pairs language accessibility with the bias review because language accessibility is an aspect of fairness. This review accentuates AIR's commitment to ensuring that items and any associated stimulus materials are without bias, sensitive issues, controversial language, stereotyping and statements that reflect negatively on race, ethnicity, gender, culture, region, disability, or other social and economic conditions and characteristics.

Passage and Item Bias Meetings

Passage and Item Bias Meetings—2014–2015 School Year

An integral practice to ensure these standards are met is the Passage and Item Bias Committee meetings. For the first year of the contract, AIR proposes combining the Bias and Data Committee meetings to review the SAGE or Smarter Balanced passages and items. Participants will review the bank to determine if passages and items meet Florida's bias and fairness standards. Since the items will already have been field-tested, the committee will not recommend any changes to content. Rather, the committee will recommend passages and items to be selected into the pool.

Our baseline bid is based on the assumption that AIR and the Department will select enough items for three fixed forms from each pool (approximately 150 items per grade/subject) to take to the committee. We propose to organize the committees by grade band, with 6–10 members per grade band for three grade bands. We anticipate that each grade level will take approximately 3 days to complete the review. AIR proposes to hold the meetings in late summer or fall of 2014.

The workings of the reviews and the details will follow the plans outlined below.

Passage and Item Bias Meetings—Other Years

AIR proposes that our typical roles for committee meetings be used for both embedded field test (EFT) items developed for the 2015 test and for subsequent years of the contract. This annual review will take place after passages and items have passed through preliminary stages of item development and bias review by staff at the Department and AIR. As part of the review process, all items and item-related materials (e.g., stimuli, manipulatives) are reviewed by an outside panel of Florida educational stakeholders. This Bias Review Committee will comprise Florida state educators from across the state, so that there will be a diverse representation of the Florida population.

AIR will work with the Department to create materials to train committee members. AIR proposes the following topics to be covered in the training to establish guidelines for the Bias Committee meetings:

- Sensitivity
- Diversity
- Stereotyping
- Inflammatory or controversial subjects
- Ethnocentrism
- Differentially familiar subjects
- Appropriate language and grammatical constructions
- Appropriately accessible graphics

AIR will distribute training materials that encompass the pertinent bias guidelines to each committee member. The materials also will include documentation to cover the following:

- Purpose of bias review
- Guidelines
- Examples for guidelines
- Exceptions for guidelines

AIR content staff will support the facilitator from the Department to ensure that the bias guidelines are used to discuss all passages and items. The possible outcomes for items and stimuli that are reviewed at the Bias Committee meeting are: accept as appears (AA), accept as revised (AR), and reject (RJ). AIR will take notes and record committee's decisions in ITS.

AIR will prepare the following materials well in advance of the meeting:

- Meeting agenda
- Bias Committee member contract
- Ancillary background information the committee member will need to participate fully in the discussions at the meeting

AIR will also print hard copies of passage and item books and will be prepared to project the passages and items from ITS web preview. After the Bias meetings, AIR and the Department will meet to reconcile decisions made by the committee. AIR will then implement changes approved by the Department.

For Bias meetings, we propose two committees organized by grade band. We anticipate the Bias meetings lasting 2 days with approximately 30 committee members organized into working groups. AIR will work with the Department to establish the target number of passages and items to review each day. AIR proposes that the meetings to review the EFT items developed for the 2015 test be held in late summer of 2014. As described in the ITN, AIR proposes to hold the meetings in October in subsequent years.

Passage and Item Community Sensitivity Committee

Before moving forward to final review, passages and items will be reviewed by the Community Sensitivity Committee. This panel of community members will be composed of Florida citizens who represent various organizations and groups across the state. The committee members will review passages and items, and consider the different groups represented by the people of Florida. The committee will work to ensure that the passages and items do not inadvertently disadvantage any groups of students.

The community review is particularly important given the political focus on the Common Core State Standards. The SAGE exam has withstood examination by a politically appointed committee of parent reviewers, and come out with flying colors. In Utah, the legislature appointed 10 parent reviewers, and the school board appointed five, to review the SAGE items. The committee included several members who vocally opposed the common core, but nonetheless supported the assessment

after viewing the items. As reported by the *Deseret News* (Salt Lake City), one committee member summarized the committee's findings,

> I think everyone, based on our comments this morning, we all feel comfortable with the test. We don't feel like it's skewed, that there's a political agenda. (Parent Committee Member Alyson Williams, quoted in Benjamin Wood (2013), *Parent committee completes review of new adaptive testing materials, Deseret News*, Nov. 8, 2013.)

The careful construction of the SAGE exam to be sensitive to the concerns of the Core's political opponents focuses the test clearly on the important, rigorous skills and content contained in the Core. Of course, community sensitivities in Utah differ from those in Florida, but the parent review provides one more piece of evidence that the SAGE items will likely satisfy Florida's community representatives.

Passage and Item Community Sensitivity Committee—2014–2015 School Year

As with the Fairness Committee review, the item pool will have to be reviewed by the Sensitivity Committee prior to the first operational use in Florida. AIR will have the Community Sensitivity Committee review the items selected for the Florida pool. The in-person committee meeting will make use of our Content Rater System, a system that exists within ITS. (The Content Rater System is described in detail in the following section.) The items selected for the pool (up to 150 per grade and subject) will be available to the Community Sensitivity Committee members. They will review the passages and items and recommend to the Department if an item should be accepted or rejected. The system also will allow for committee members to respond to specific questions about criteria relevant to sensitivity reviews. The Department will make the final determination about whether to select passages and items into the pool.

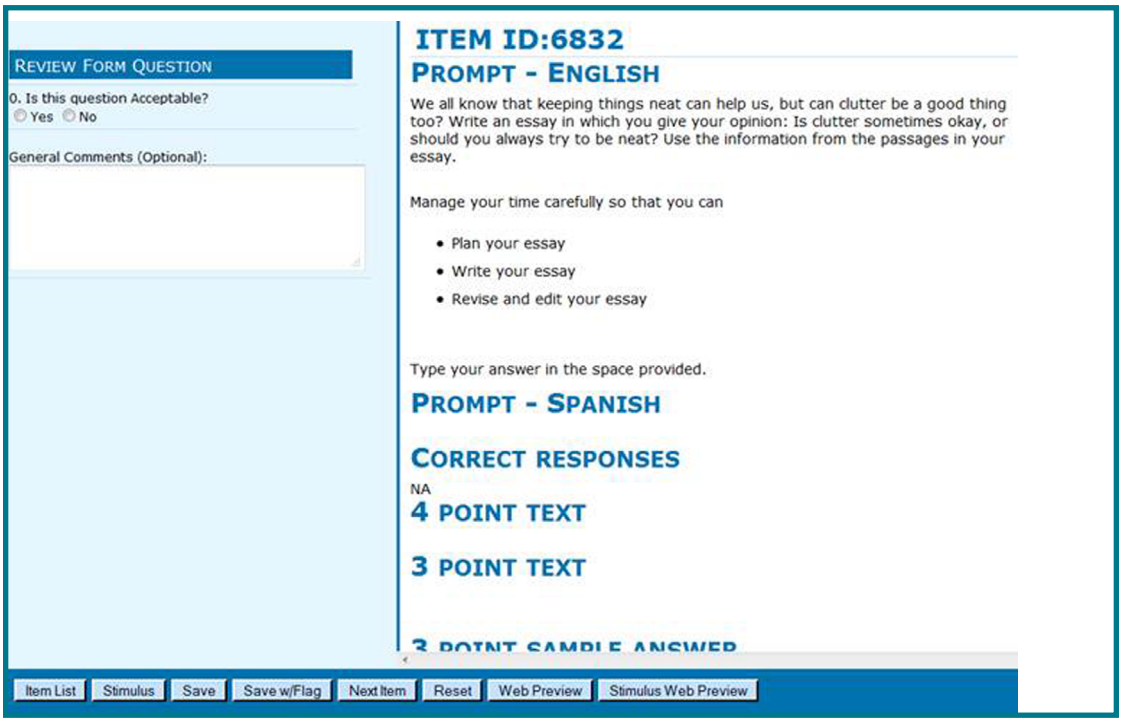
AIR proposes that the Community Sensitivity Committee take place concurrently with the combined Bias and Data Review meetings in late summer of 2014. We will organize the committees to complete their work within 3 days the first year.

Passage and Item Community Sensitivity Committee—Other Years

As with the first year of the contract, AIR proposes using an in-person committee meeting supported by our Content Rater System both for EFT items developed for the 2015 test and for subsequent years of the contract. If the Department chooses, however, AIR is prepared to hold online meetings for this review. Again, the entire pool will be available to the Community Sensitivity Committee members. Participants will review the passages and items, but they also will be able to log comments to the Department recommending changes to content.

The online review will allow committee members to see how passages and items will appear to students and how they will function. Through the Content Rater System, committee members will be able to access relevant attribute information (e.g., genre, text complexity, standards, Depths of Knowledge [DOK]) so that they can reference passage- and item-relevant traits easily. Exhibit 7.3.4.1-1 provides an example of an item as it appears to participants. The question appears on the right side of the screen. On the left side, participants indicate the item's acceptability and have the option to leave comments. This can be configured to the Department's specifications.

Exhibit 7.3.4.1-1: Content Rater System for Online Item Review



As they review the bank's content, committee members will be able to flag items they wish to revisit, leave comments, and recommend if an item should be accepted or rejected. AIR proposes that the committee log comments and recommendations for the Department in the Content Rater System. The Department can then review the comments and make final decisions about whether to accept or reject the recommendations made. After the Department reconciles recommendations from the committee, AIR will implement any necessary changes. Exhibit 7.3.4-2 shows a sample log. Again, the system will be configured to the Department's specifications.

After the committee meetings, AIR will generate reports directly from the Content Rater System. The reports, which export as Excel documents, will provide the acceptance and rejection rate of items and also will include the comments left by each reviewer.

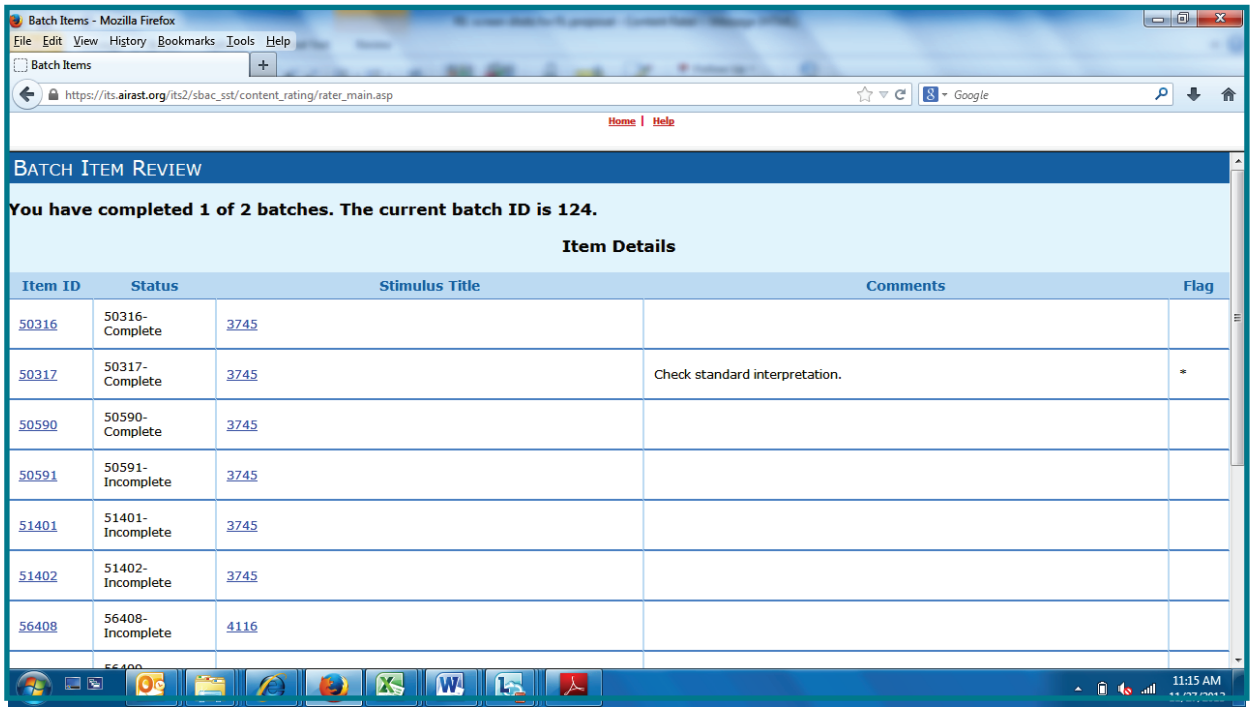
AIR will work with the Department to create training materials for the review. In advance of the meeting, AIR will prepare the following materials:

- Meeting agenda
- Sensitivity Committee member contract
- Ancillary background information the committee member will need to participate fully in the discussions at the meeting.

AIR proposes assigning batches to committee members, which will not only allow items to be easily tracked, but will also ensure that all items will have the required number of reviews. Committee members will then simultaneously review these pre-loaded batches, allowing for thousands of items to be reviewed in a short window of time.

As stated in the ITN, this annual review will take place concurrently with the Bias Committee meetings and will last 2 days, with approximately 30 participants. AIR will work with the Department to establish the target number of passages and items to review each day.

Exhibit 7.3.4.1-2: Sample Batch Item Review Log



7.3.4.2 Passage and Item Content Review Committees

The Passage and Item Content Review Committees, which are made up of Florida educators and content experts, will be responsible for reviewing passages, items, and scoring rubrics from a state educator's perspective. Content reviewers will focus on item and scoring-rubric quality, the appropriateness of passages and items for the grade level, the representative nature of the item set, and the match of the items to Florida's standards and test specifications. AIR will work with the Department to determine additional attributes on which they want the committee to focus (e.g., DOK).

Passage and Item Content Review Committees—2014–2015 School Year

For the first year of the contract, participants will review the items selected for potential inclusion in the pool to confirm that the items and passages appropriately reflect Florida's content standards. Since the items will already have been field-tested, the committee will not recommend any changes to content. Rather, the committee will recommend passages and items to be selected into the pool. The Department will make the final decision about which passages and items are chosen.

For the Passage Content Review Committee meetings, AIR proposes nine groups—one for each grade—of eight committee members. For the Item Content Review Committee meetings, AIR proposes nine groups—one for each subject and grade—of eight committee members. We anticipate the meetings will last approximately 5 days. AIR will work with the Department to establish the target number of passages and items to review each day. AIR proposes that Passage Content Review Committee meetings be held in late summer 2014 and Item Content Review Committee meetings be held in early fall of 2014.

Passage and Item Content Review Committees—Other Years

As with the first year of the contract, reviewers will focus on item and scoring-rubric quality, the appropriateness of passages and items for the grade level, the representative nature of the item set, and the match of the items to Florida's standards and test specifications. However, for both the EFT passages and items developed for the 2015 test and for passages and items developed in subsequent years, committee members will be able to make recommendations on how to revise content.

AIR will prepare the following materials well in advance of the meeting:

- Meeting agenda
- Item Content Review Committee contract
- Copy of the Florida Standards
- Ancillary background information the member will need to participate fully in the discussions at the meeting

AIR's management staff, content team, and assistants will be onsite to manage the flow of the meetings. AIR content staff will support the Department, helping to facilitate orienting the committee members to the item review task, presenting the items for review, and recording all recommended revisions and committee comments.

AIR will be prepared to project each item in ITS web preview. Committee members will have the opportunity to review both the content and the online presentation of the each item and stimulus. Moreover, the committee will be able to see how students interact with machine-scored constructed response items and also be able to review how responses score. Notes and other comments will be entered into ITS live, making sure the committee's recommendations are fully and accurately captured. All previous versions of passages and items are archived in ITS and, if necessary, can be easily retrieved.

After the committee has concluded its review, AIR and the Department will have a resolution/reconciliation meeting to go over the committee's recommendations. At the meeting, AIR and the Department will review the committee's recommendations to discuss what revisions are needed and to determine the final outcome of each item. At the conclusion of each day's meeting, AIR staff will collect and secure all materials.

As detailed in Section 7.3.3, stimuli and items will go through additional editorial and content reviews to ensure changes have been resolved correctly.

For the Passage Content Review Committee meetings, we propose nine groups—one for each grade—of eight committee members. For the Item Content Review Committee meetings, we propose nine groups – one for each subject and grade – of eight committee members. We anticipate the meetings will last approximately 5 days. AIR will work with the Department to establish the target number of passages and items to review each day.

AIR proposes to hold Passage Review Committee meetings in August and Item Review Committee meetings in October, as described in the ITN.

7.3.4.3 Data Review Committee

Data Review Committee—2014–2015 School Year

As detailed in the section on Passage and Item Bias Meetings, AIR proposes combining the Bias and Data Committee meetings for the first year of the contract. Participants will review selected items and passages to determine if

passages and items meet Florida's bias and fairness standards and make recommendations about which passages and items to be selected into the pool. AIR proposes to hold the meetings in late summer or early fall of 2014.

Data Review Committee—Other Years

The Data Review Committee, comprising state content experts, grade-level teachers, Florida accessibility and accommodations experts, and psychometricians, will review field-test item statistics. AIR will work with the Department to determine the criteria on which to review items. Prior to the meeting, AIR's psychometric team will analyze items according to these criteria. They will then provide to the Department a Master Data Sheet (MDS) and access to the ITS item cards. The MDS is a Microsoft Excel data file that contains a comprehensive summary of the statistics on each of the field-test items. Both files provide information on the items that the Department can use to determine if the items will remain in the pool or whether specific items should be removed based on some of the field-test statistics. Items that do not meet the Department's criteria will be flagged. AIR proposes that these items will then be reviewed by the Data Review Committee.

AIR proposes to use in-person Data Review Committees. We will prepare item cards and have the committee review only the items that are flagged for a high risk of bias. In general, this is a relatively small proportion of the items field-tested. AIR staff will support the Department's facilitator as the committee members review items to ensure they behave as expected. The committee also will see that items include all correct responses and review differential item function (DIF) statistics to ensure the items are fair to all students.

After the meetings, AIR will meet with the Department to reconcile items reviewed by the committee. The Department will make a final recommendation and determine which items are eligible to move into the operational pool.

For the Data Review meetings, AIR anticipates the meetings will last 2 days with approximately nine members. As stated in the ITN, the meetings will be held one time annually in May or June. AIR will work with the Department to determine during which month the meetings will be held.

7.3.4.4 Content Advisory Committee

With the guidance of the Department, the Content Advisory Committee (CAC) will advise the Department about the scope of the assessments. Specifically, the committee will provide recommendations about the overall number of items, the types of items used to assess each standard, and the standards selected to be assessed at each grade and on each assessment. AIR will work with the Department to establish the materials and process required for the CAC. AIR proposes using a comprehensive set of materials to help facilitate the process, as follows:

- Passage Specifications
- Item specifications
- Pool Analyses
- Blueprints

As stated in the ITN, the CAC will convene for 3 days, three times per year for the first year of the contract and two times per year for each subsequent year of the contract. AIR proposes three groups per subject—one for each grade band (i.e., grades 3–5, grades 6–8, grades 9–11)—of approximately 4–5 committee members. AIR will work with the Department to establish the time frame in which the meetings will be held.

7.3.5 Develop Field-Test Item Sets and Forms

Schedule A of the ITN shows which tests will exist online and which will remain as fixed paper forms until a later transition. The transition to computer-based tests (CBT) is a key issue of which we are cognizant for the embedded field tests (EFT), and we accommodate the transition to a different mode in our proposed EFT approach.

Specifically, the first administration under this contract will occur during the spring of 2015. Hence, this will be the first year in which we could embed field-test items.

However, we do not propose to embed field-test items onto a paper form if the state is transitioning to a CBT in the following year. Item parameters for an item from a paper form may not hold when that same item is presented using a different mode of administration. Therefore, item parameters for an online test should also come from an online field test.

For this reason, AIR recommends no field testing of items in the year preceding a transition to a CBT (for instance, grade 4 ELA transitions to a CBT in 2015–2016). Hence, the paper form in 2014–2015 will not include EFT items given that the item parameters from the 2014–2015 paper form are not generalizable to the online mode of administration.

Exhibit 7.3.5-1 provides a summary of when AIR proposes to implement an EFT for each grade and subject and the mode in which the EFT will occur.

Gap Analysis to Determine Needs of the Item Bank

Each year, AIR proposes to perform a detailed operational item pool analysis, identify any gaps in the item pool, and develop new items to fill the gaps, as well as to augment the item pool for the future test administrations. The gap analysis will proceed by investigating the item pool with respect to the following criteria:

- Number of items in the pool for each strand relative to the demands of the test blueprint
- Range of item difficulty for items within each strand
- Distribution of item type (e.g., selected response) in the pool

If the state should choose an assessment to be delivered adaptively, then the following would also be applied in the gap analysis:

- Examine items that tend to be exposed often (item exposure is a possible indicator of an area within the bank that needs attention)
- Simulate testing conditions using AIR's simulator tool (this tool can be used to project where the algorithm has difficulty meeting the blueprint given a lack of items in the pool).

Proposed Number of Field-Test Items and Forms

The large number of tested students in each grade in the state makes it possible to field test many items and grow the item bank quickly. Our proposed approach is to field test approximately 1.5 times the number of items needed to build a test form for each grade and subject in the years in which we conduct the EFT. This ensures that the item banks each year will be sufficiently deep to support construction of equivalent test forms even if some items are dropped during item data review. Of these items, approximately 30% will be machine-scored constructed-response (MSCR) items. For paper administrations, when possible, machine-scored items from the online

Exhibit 7.3.5-1: Summary of Planned Embedded Field Testing

Grade	Subject	2014–2015	2015–2016	2016–2017	2017–2018
3	ELA/L	EFT to support future PBT	EFT to support future PBT	No EFT	EFT to support future CBT

	Mathematics	No EFT	EFT to support future CBT	EFT to support future CBT	EFT to support future CBT
End-of-Course	Algebra I	EFT to support future CBT	EFT to support future CBT	EFT to support future CBT	EFT to support future CBT
	Algebra II	EFT to support future CBT	EFT to support future CBT	EFT to support future CBT	EFT to support future CBT
	Geometry	EFT to support future CBT	EFT to support future CBT	EFT to support future CBT	EFT to support future CBT

pool will be rendered for paper administration, but scored by hand. For machine-scored items that cannot be rendered faithfully on a paper test form, AIR will identify replacement constructed-response (CR) items to measure the same reporting strands.

At Florida's request, AIR would be pleased to support additional item deliveries (in batches of 75 items) if the state feels additional item development is needed to support future test administrations or alternate forms.

Exhibit 7.3.5-2 provides the number of items, by type, and forms that we propose as a part of our base proposal. Differences in the exhibit reflect the differences in the expected mode of field-test delivery as described in Exhibit 7.3.5-1. The paper forms will include 55 selected-response items, 15 scannable constructed-response items, and 5 hand-scored items. Online forms will not include hand-scored items, but instead will include a total of 25 machine-scored constructed-response items. ELA tests will include up to 10 items to accommodate either a large number of items per passage or multiple passages. The paper

form field-test design will reflect the online design once the transition occurs.

EFT for Online Forms

Here we describe the sampling methodology that will be utilized when the forms are administered online. If the CBT is in fact a fixed form, then 15 forms with 5 items per form will be constructed with the EFT items placed onto the same, fixed positions across each form. If the Department chooses an adaptive option, then the 75 items will be added into the test pool and seeded into the test forms as the algorithm describes. AIR's online field-test algorithm as described here will be used to administer the items. The method applies similarly to items or intact forms.

The algorithm employed by AIR's field-test engine ensures that

- efficient samples are used for all items/forms by randomly selecting from among the least administered items/forms to ensure that resulting differential item functioning (DIF) statistics are maximally efficient across all items;

Exhibit 7.3.5-2: Number and Types of Items and Forms Proposed as Part of Our Base Proposal

						Item Type					
Grade	Subject	Mode	Target Number of Forms	Target Test Length	Total EFT Items	Selected Response	MSCR	Scannable CR	Hand-Scored CR	EFT Items per Form	Number of Forms

	Geometry	Online		50	75	50	25			5	

Note: ELA/L excludes the writing performance task, which is discussed in Section 7.3.6.

- position effects are averaged out by randomly administering test items across test positions; and
- more robust linkages exist among items, because each item is linked with every other item across hundreds of unique test "forms" to a degree not manageable through a set of fixed forms.

The field-test algorithm randomly assigns both the field-test items and the field-test item position, ensuring that

- a random sample of students is administered each item; and
- for any given item, the students are sampled with equal probability.

AIR's field-test algorithm yields a representative, randomized sample of student responses for each item. The field-test algorithm also leads to randomization of item position and the context in which items appear. Field-testing each item in many positions and contexts should render the resulting statistics more robust to these factors.

EFT for Paper Forms

Exhibit 7.3.5-1 shows when paper-based forms will include EFT items. On each of the proposed 15 forms, EFT items will be placed onto the same, fixed slots on each form with each form containing 5 items.

Additionally, we must consider the sampling design of these forms to produce the most efficient item statistics. Administering the same form to students within a similar group, or cluster, produces what is referred to as a clustered sample design (Kish, 1965). The clustered sampling design, however, yields estimates that are less precise than would be obtained under a pure random sample (Hedges & Hedberg, 2007; Kish, 1965). This imprecision also propagates into the equating error, thus causing the equating between forms to be less precise.

The *design effect*, or variance inflation factor, occurs when student responses arise from within a similar instructional unit. In such cases, the nominal sample size (i.e., actual number of students) can be substantially larger than the effective sample size (i.e., number of students providing unique information). Kish (1965) defines the design effect as:

$$\text{DEFF} = 1 + (m - 1)\rho$$

where m is the number of units in a cluster and ρ is the intra-class correlation. Holding m constant, as ρ tends to 0, the design effect tends to 1, in which case there is no variance inflation. As ρ becomes larger, the design effect exceeds 1, causing for variances that ignore the design effect to be underestimates of the true sampling variance. Holding ρ constant, we see that larger clusters yield larger design effects than smaller clusters. For instance, a district-level cluster will typically have larger design effects than a school given that districts are larger than schools.

The loss of information due to clustering can be insidious. Item response theory (IRT) software designed to estimate simple random-sample standard errors simply report the standard errors of the item parameters when applied to a clustered sample design. The reported standard errors overstate the precision of the estimates. Therefore, the lower precision only becomes apparent when unexpected changes in performance is observed over time, or items "drift" more dramatically than the *reported* standard errors would imply. This is critically important for Florida as the state intends to examine item/scale drift over time.

For the items with stimuli, such as items associated with a simulation and research/essay tasks associated with some reading passages, if an item that is part of a shared stimulus group is selected, then all items in that group will be administered.

Variance Inflation in Clustered Designs

Exhibit 7.3.5-3 provides information on the consequences of a clustered design on the effective sample size. Each row in the table assumes four forms and 1,000 students administered each form. For illustration, the table assumes 200 classrooms, 100 schools, and 50 districts. For planning purposes, we assume an intra-class correlation of .10 at the district level, .15 at the school level, and .20 at the classroom level. The values are on the order of magnitude recommended by Hedges and Hedberg (2007), as described in their paper on power calculations for clustered designs.

The first row in the table assumes a random sample, in which case the design effect is 1.0. In this case, the nominal sample size is equal to the effective sample size and there are 1,000 students providing unique information for each operational form. Under this design, the standard errors obtained from commercially available software would be appropriate to represent the sampling variance of the item parameters.

The second row shows the consequences on the effective sample size when forms are spiraled by students within a class. In this scenario, only a subset of students within the same instructional unit are administered the same test form. Hence, the covariance between students within the same group cannot be ignored, resulting in a design effect of 3.6.

Note that in this scenario, the effective sample size is only 282 even though the nominal sample size is actually 1,000 students per form. In the final row of the table, we show the consequences on the effective sample size when forms are spiraled by district. In this row, the design effect increases to 11.8 and the resulting effective sample size is 85. In other words, even though 1,000 students are administered each form, it is as if only 85 of those students are providing unique information.

The design effect at the district level is substantially larger than that at other levels because the design effect is a function of both the intra-class correlation and also the number of individuals within a cluster. Holding the intra-class correlation constant, larger clusters have larger design effects than small clusters.

Commercially available software computes standard errors, always assuming there are 1,000 unique responses per form even when the design effect is greater than 1.0.

Recommendation for Spiraling Paper Forms

AIR's recommendation is to spiral the EFT forms by students within a classroom, thus minimizing the effects of a clustered design by reducing the number of students within a given cluster. In addition, AIR proposes to calibrate these items using our iAM software which computes standard errors consistent with the sampling design. Hence, our spiraling proposal minimizes the design effect, but does not remove it. For this reason, it is still necessary to compute design-consistent standard errors and AIR's IRT software is the only psychometric software available for this purpose.

7.3.6 Develop Stand-Alone ELA/L Field-Test Sets and Forms

The ITN indicates a possibility for an independent field test for extended-response items

Exhibit 7.3.5-3: The Effect of Spiraling Design on the Standard Error (SE) of Item Calibrations

Sample Sizes		Spiral Design		Design Effect	Inflation in SE	Effective Sample Size
# Forms	4	Design 1	Forms are administered to a random state-wide sample	1.0	1.0	1,000
# Students	4000	Design 2	Forms are spiraled by students within classrooms	3.6	1.9	282
# Classrooms	200	Design 3	Forms are spiraled by classrooms within schools	4.3	2.1	233
# Schools	100	Design 4	Forms are spiraled by schools within districts	5.8	2.4	172
# Districts	50	Design 5	Forms are spiraled by districts	11.8	3.4	85

in ELA/L. One option AIR is prepared to offer is for the state to use the extended-response tasks that were developed for the Utah SAGE test. Development for that state provided a sufficient number of tasks per grade for which Florida could use one task per year in each grade over the course of the contract.

A second option is for the state to develop a new set of extended-response tasks for a stand-alone field test. If this option is selected, we propose to develop 20 extended-response prompts for each grade to be field tested. With approximately 200,000 students per grade, this would yield 10,000 student responses per task.

Sampling Method

If these extended-response tasks are administered on paper, we propose to use the same spiraling method by students within a class as described above. If administered in a computer-based environment, the sampling method will use AIR's online field-test algorithm described above.

7.3.7 Constructing Test Forms

AIR is proposing a set of options from which the Department can identify the solution that works best for students and educators in Florida. For online assessments, the Department can elect to stay with fixed-form assessments, consistent with the paper-based assessment model, or move to an adaptive assessment system. Both options draw on large pools of calibrated items designed to support computer adaptive testing. There are numerous advantages to adaptive testing, including not only increased measurement precision for low- and high-achieving students, but also the capacity to measure a much wider range of the academic content domain at aggregated levels of analysis. Although any one student may only see one or two items per benchmark, just as in a fixed-form test, that same benchmark will likely be assessed using a range of items across the students in a classroom, providing sufficient information to yield accurate and stable estimates of benchmark level performing at aggregate units of analysis, and allowing the Department to significantly enhance the score reports provided to educators in a psychometrically sound manner.

Although the banks are calibrated to support computer adaptive testing, the Department is of course free to adopt any reporting scale it chooses, or even multiple reporting scales should the Department elect to maintain separate within-grade and across-grade (developmental) scales. The final reporting scales will be established immediately following standard setting activities and adoption of the new Florida statewide assessment (FSA) standards by the Department. Should Florida choose to stay with a fixed-form assessment design, we anticipate that the Department will wish to post-calibrate the test forms and establish a distinct FSA reference scale to which all future test administrations will be linked.

Regardless of whether the Department decides to move forward with an adaptive assessment system or maintain a fixed-form design, AIR's field test design, described in detail in Section 7.3.5, ensures that the FSA will be an assessment system uniquely designed to meet the needs of Florida's students and educators. Florida's large student population (as well as efficiencies gained by AIR's field-test engine) ensures that large numbers of Department-developed items can be calibrated as part of the first operational test administration to substantially augment the existing adaptive pool or move to an entirely Florida-exclusive item pool to support a fixed-form assessment design. Even if the Department adopts an existing within-grade scale for purposes of adaptive testing, Florida can still choose to implement its own vertical linking design to develop a uniquely Floridian developmental scale.

7.3.7.1 Test Construction Specifications

Test construction proceeds somewhat differently in the context of adaptive versus fixed-form assessments. In a fixed-form test, the ideal test information function is decided once. Each year, a team of content experts and psychometricians makes a sequence of decisions about items to include. The test construction team may allow some deviation from the ideal information function to get a better match to the blueprint. The team may allow reuse of some items from a prior administration to achieve the desired balance. The number and types of compromises made depend, often, on the items available in the operational item bank. Participants draw on their experience and professional judgment to make these decisions but rarely articulate the guiding principles.

In an adaptive, criterion-referenced test, these decisions take on a different character. The system does not construct a test but rather implements an algorithm for constructing many tests. Calculations and algorithmic logic take the place of professional judgment. AIR's adaptive algorithm is highly configurable. This allows variable weighting of different blueprint constraints and provides several mechanisms for controlling the balance between blueprint match and the precision of measurement. In addition, the adaptive algorithm provides the ability to limit item exposure. In a fixed-form test, all items are "overexposed" each year.

Blueprint Construction

Sample blueprints are provided in Section 7.3.1. Distribution of item ranges is designed to accomplish several important goals. First, as a criterion-referenced test, the FSA must reflect a representative sample of the knowledge and skills that students are expected to achieve by the end of each school year or course. In addition, to support student level reporting of domain scores, each domain must be assessed with sufficient items to support reliable subscale performance level reporting.

Whether Florida chooses adaptive or fixed-form tests, the blueprints are designed to accomplish both goals, with items targeting the full breadth of the academic content standards, but constrained to ensure a sufficient number of items in each domain to achieve reliable subscale reporting. Moreover, item ranges for depth of knowledge (DoK) levels and item types ensure that students, regardless of overall ability, are administered test items representing the full range of cognitive complexity and are provided the opportunity to demonstrate their knowledge and skills through the range of item types.

Test Construction

We understand that Florida currently plans to implement fixed-form tests. Here, we briefly describe the construction of adaptive tests and provide a more detailed description of our approach to constructing fixed-form tests.

Configuration of Adaptive Tests

Constructing forms for adaptive tests consists of two steps: establishing the item pool and then optimizing the item selection parameters for the selected pool. Our adaptive engine is robust to imbalances in the item pool as long as there are a sufficient number of items in the various blueprint categories. Therefore, the selection of items for inclusion in adaptive pools is less critical. When items are clustered into groups, as with reading tests, we must also pay attention to the composition of the item sets and the degrees of freedom available to the algorithm to select from among them. To configure and evaluate the performance of the adaptive algorithm, AIR psychometricians use our simulation tool.

Item Pool. As long as there are sufficient items to meet each of the blueprint specifications, the adaptive algorithm is robust with respect to item pool composition. It is therefore not necessary that the distribution of content standards within the item pool be proportional to the test blueprint. Nevertheless, as we describe in Section 7.3.3 Develop Items, AIR test development and psychometric staff inventory the item pools prior to each test administration to identify any gaps in the pool that should be especially targeted for item development.

Item development in a fixed-form environment typically aims to concentrate test information near the critical proficient cut score. When all students are administered the same form, the goal is to minimize measurement error near the location of important cut scores. In adaptive environments, of course, the goal is to minimize error near each student's ability level. This places a greater premium on developing items that more effectively measure students near the ends of the ability distribution, increasing the proportion of very easy and very difficult items. As part of our item pool inventory, we also evaluate the distribution of item difficulties within content domains to guide our item development strategy.

With respect to item pool adequacy, we note that the evaluation and the selection of items into the operational pool proceed somewhat differently between an adaptive and a fixed-form assessment. In a fixed-form environment, the criteria for promoting items to the operational bank may be somewhat relaxed, allowing the inclusion of items that may not have optimal statistical characteristics but that are intended only to be available for placement in a test form when no other suitable items are available. Thus, item statistics are generally evaluated twice, once during data review for inclusion in the operational pool and again at form construction for placement in operational test forms. In an adaptive assessment, all items in the pool are available for test administration. For this reason, the criteria for including items in the operational bank should be more stringently applied than might be the case in a fixed-form environment. All items in the adaptive item pool must meet minimum requirements for item discrimination, be within the acceptable range of item difficulties, and demonstrate appropriate fit statistics. The adaptive algorithm does not recognize items as being for use only in emergencies.

Simulation Tool. The simulator allows psychometricians to adjust parameters within the adaptive algorithm to optimize it for use with a particular item pool. The simulator outputs a host of indicators including, but not limited to,

- estimates of bias at the overall and reporting category levels;
- standard errors and distributions of standard errors;
- match to blueprint;
- number of unique benchmarks administered to each student;
- item exposure;

- number of item groups administered; and
- item reuse across opportunities.

Psychometricians adjust configuration parameters to achieve the optimal mix of outcomes. For new assessment systems, they may recommend changes to the blueprint, extending or restricting the range of items on each content standard or with each affinity group. Sometimes small changes can improve outcomes, and we encourage our psychometricians to inform our clients when this is the case. Of course, any substantive blueprint change remains the Department's decision.

Psychometricians interact with the simulator by modifying the configuration parameters in a web-based environment. When the configuration parameters are finalized, this same configuration is uploaded to the Item Tracking System (ITS) to generate a new version of the configuration file. Simulations are run on the new file as a final check that nothing has changed and that all procedures were followed. The Department will receive a final report on all simulations containing the detailed statistical output.

7.3.7.2 Test Construction System

The process for constructing operational forms begins after field testing and committee review. Once the item pool is finalized and locked down, our content specialists begin the process of constructing test forms.

Test forms are constructed in pieces. First, we construct the intact operational forms, then add to them the field-test items, or (in the case of our automated field-test algorithm) specify field-test item locations. Please see Section 7.3.5 for a discussion of the embedded field-test items. Operational passages and items qualified for operational forms are those that have met all of the criteria established by the Department in terms of content, fairness review, and data characteristics.

Each form is built to exactly match the detailed test blueprint, and match the target distribution of item difficulty and test information. Together, these constitute the definition of the instrument. The blueprint describes the content to be covered, the depth of knowledge with which it will be covered, the type of items that will measure the constructs, and every other content-relevant aspect of the test. The statistical targets ensure that students will receive scores of similar precision, regardless of which form of the test they receive.

AIR's FormBuilder software helps our test developers as they construct operational forms. FormBuilder interfaces with ITS to extract test information and interactively creates test characteristics curves (TCCs), test information curves (TICs), and Standard Error of Measurement Curves (SEMCs) as test developers build a test map. This helps our content specialists ensure that the test forms are statistically parallel, in addition to ensuring content parallelism.

All test forms for each content area will be constructed so that they are strongly parallel. This means that the test scales and performance levels will be equivalent from form to form, and that the raw score to scale score comparisons for each form will be as similar as possible, given the characteristics of the item bank.

Using FormBuilder, our content specialists select test items that match the blueprint and are of appropriate difficulty. Beginning with content considerations and supplementing those considerations with statistical considerations, AIR will create alternate, parallel test forms by comparing TCCs for the form that is being created with TCCs from previous forms. To the degree that the TCC for the total test is the same as for previous tests, the raw score required for meeting any performance standard will remain as close to the same as it was on previous forms.

Not only will AIR construct alternate, parallel forms at the total test level, we will also attempt to create alternate forms that have similar subtest psychometric structures, as well. This goal may be more difficult to attain than equivalence at the total test level because of the smaller number of items from which to select.

As test developers build forms, FormBuilder generates TCCs, TICs, and CSEMs for the reference (previously used) form and the target (new) form(s) on the screen. The TCCs and SEM curves are plotted using a different color trace line for each prototype form. Sample TCC and SEM curves are provided in Exhibit 7.3.7.2-1.

At this point, the test developer can see the exact difficulty relationship between the target and reference forms. If the difficulty and error structure for the target forms is virtually identical to the reference form, as in the sample TCC and SEM curves, then the item selection process concludes with multiple, parallel test forms.

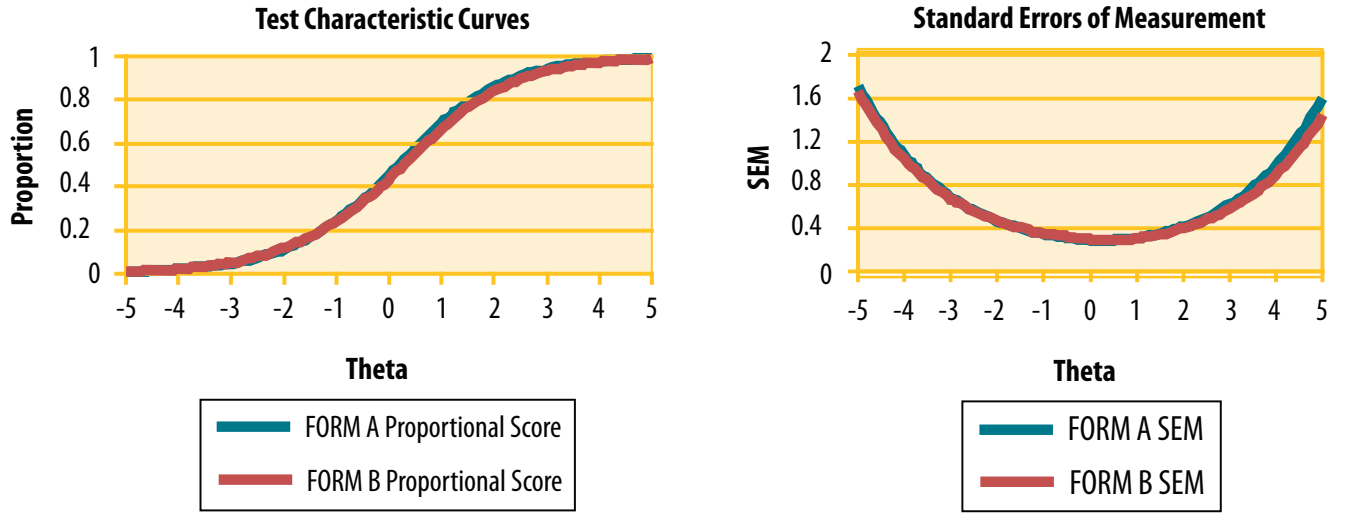
Once the goal of parallel forms is achieved, the information is entered into ITS, which tracks item usage and generates bookmaps (test maps) for use in scoring, forms development, and other processes.

FormBuilder Output Files

Once operational forms have been defined in FormBuilder, all bookmaps (test maps), key files, and conversion tables are produced directly from FormBuilder to eliminate the possibility of human error in the construction of these important files. Bookmaps, key files, conversion tables, and other critical documents are generated directly from information maintained in ITS. The information in ITS has been through rigorous reviews by multiple skilled reviewers, fortifying it against errors. Automated production of these critical files (such as key files) virtually eliminates opportunities for errors.

Bookmaps can include any item attribute stored in ITS, so that in addition to form-level attributes such as test administration and item position, item attributes such as content standard, benchmark, indicator, complexity, item release status, point value, weight, keyed response, and more can be included in the bookmap. The bookmap feature in FormBuilder can be customized to serve a

Exhibit 7.3.7.2-1: Test Characteristic Curves and Standard Errors of Measurement



variety of clients within an assessment project. Bookmaps used to review and approve operational-test forms require more in-depth item attribute information. When creating bookmaps to lay out printed test booklets or to score test forms, it may be desirable to include fewer item attributes.

As a further layer of quality assurance for printed test booklets, both during the blueline production phase prior to printing and again following the final printing of all test forms, two AIR technical team staff members independently take all test forms. Responses to the test forms are compared to the answer keys for each form to confirm the accuracy of scoring keys. In addition, the printed forms are compared against ITS and FormBuilder for content and item ordering to ensure that no changes to the form are introduced prior to printing.

7.3.7.3 Construct the English Language Arts/Literacy, and Algebra 1, Algebra 2, and Geometry Retake Forms

As we have described throughout this proposal, whether the Department elects to administer the FSA as an adaptive or fixed-form assessment, our experience across multiple states, including those that initially maintained post-equating, strongly indicates that a move to online test administration often leads to pressure from the field for immediate scoring and reporting of test results. Students and educators alike expect that when test administration is completed, students can expect to receive feedback on their performance and educators, from classroom teachers through to superintendents, expect to be able to gain immediate access to assessment results that not only summarize current year performance but also track student, teacher, school, and district performance over time.

We therefore recommend that the Department employ pre-equated item parameter estimates to score student responses for all online assessments. In the ITN, while the Department envisions maintaining a post-equating approach to scoring census test administrations each spring, the grade 10 retake forms are designed to be scored using pre-equated parameter estimates. Pre-equated scoring for the retake assessments makes sense for the same reasons described for census test administrations, including much faster return of test results to students and their families and educators, but also because the retake assessments are administered to highly selected samples of low-achieving students. Post-equated parameter estimates calibrated on such highly selected samples of students may not be accurate, rendering moot any advantages of post-equating that might typically be gained when applied to representative samples of students statewide.

An impediment to immediate scoring and reporting of assessment results has been the need to hand-score constructed-response item types. We note that the entire SAGE assessment is machine scored, with some human backreading of the ELA performance tasks. For Florida, we recommend human scoring for performance tasks used in high-stakes individual decisions.

AIR is the industry leader in the development and implementation of machine-scored item types that

- include real performance-based simulations and constructed-response items;
- can be readily embedded in operational test forms for field-testing;
- are inexpensive to score; and
- support immediate reporting of test results.

The variety of machine-scored item types available to the Department is described in Section

7.4.9.9. Most AIR item types are rubric scored, with rubric validation occurring following field-test administration and prior to calibration and equating activities. Thus, machine-scored items provide the Department with a rich and relatively inexpensive source of genuine performance items for assessing student achievement of Florida's academic standards. For essay items that employ a statistical scoring engine, and for which we recommend assigning final scores based on human readers, we can provide preliminary test results immediately following test administration based on machine scoring, with final scores provided later following hand-scoring or hand-scoring verification of machine-assigned scores.

Embedded field-testing may not be practical for some items or item types. There are three possible approaches for handling these item types on retake assessments.

As the Department suggests in the ITN, one approach is simply to exclude such item types from the retake blueprints. We feel there are more constructive approaches to this problem. Even if item parameter estimates are based on standalone or independent field-testing, such estimates, especially in the context of rigorous linking and sampling designs, are quite reliable. Thus, eliminating a class of items simply because the parameter estimates are not obtained under ideal circumstances seems an extreme solution.

A second approach is to populate such item types in retake tests from previously administered operational test forms when possible. Especially where there exists a large pool of operationally administered test items, items could be migrated from census test administrations to a retake pool and finally targeted for release based on item exposure rates.

A third approach is to use linked parameter estimates derived from the standalone field test. As noted above, when standalone field tests implement robust linking designs and employ sound sampling methodologies, linked parameter estimates are reliable and suitable for operational scoring. It is often true that students perform somewhat better in the context of operational test administrations than in standalone field tests, especially with respect to more cognitively complex items, but any differences in motivational factors (or any other factors) underlying test administration context are accounted for when items are linked back to the reference scale.

Decisions about which approach to use must balance multiple assessment goals. Previously administered operational test items may have the advantage of operationally based parameter estimates, but the increased exposure of such items may pose security risks. Eliminating the item types from the assessments altogether suggests a change to the underlying construct and a threat to strong equating of test scores. Parameter estimates derived from standalone field tests can provide valid test scores that are equated with other census and retake assessments.

Form construction for pre-equated retake tests follows the same procedures used for the spring assessments described in the previous section. As with census assessments, we propose to electronically generate a series of candidate test forms with information targeted at the critical cut score. Psychometric characteristics of candidate test forms, including test characteristic curves, and standard error and test information graphs, will be evaluated by psychometricians via the FormBuilder component of ITS. Psychometricians will work with test development staff to make any desired modifications to test forms prior to submitting forms to the Department for review and approval.

7.3.7.4 Prepare Camera-Ready or Screen-Ready Test Forms

AIR will prepare camera-ready documents or screen-ready files after the test items have been selected, composed in forms, and reviewed per the Department's specifications.

Paper tests go through a traditional production process. AIR's test booklet production process starts with the creation of test maps (also referred to as bookmaps). The test map is built in ITS and initiates the production of printed test forms. The process includes the following five steps:

1. The 1×1s are generated based on the test map (bookmap).
2. Blackline 1 is drafted and reviewed internally.
3. Blackline 1 is delivered to the Department for review and approval.
4. Should any changes be requested in the blackline 1 review, AIR produces, reviews, and delivers blackline 2 to the Department.
5. The documents are brought to blueline (camera-ready copy).

Step 1 is entirely automated within ITS. ITS houses destination templates that define the format of the 1×1s and automatically generates these documents based on the test map. (AIR defines 1×1s as test items printed one per page according to the test map sequence.) At this stage, items are proofread by editorial staff and test development staff at AIR and the Department. Additionally, they are reviewed to verify that all edits from previous rounds of review have been correctly implemented. Any changes required at this stage are entered directly into ITS to ensure consistency across all item uses.

Blackline 1 is a semi-automated process. With the appropriate destination template defined and 1×1 approval, ITS generates a Quark-readable document in the specified format. Through this integration, items are automatically styled with fonts, graphics, spacing, and other formatting specifications outlined in the Department's style guide. Our production staff may adjust page layout, including instructions, borders, and other elements, to meet the Department's guidelines. At this stage, reviewers check the document layout and formatting. Should any egregious errors be found in the content of an item, changes must be entered into ITS and the item must be re-exported to ensure consistent item use across all test forms. Changes to blackline 1 require a second blackline proof. Changes to subsequent blackline proofs require sign-off by senior management.

The final quality assurance step prior to printing is the blueline, or camera-ready copy, review stage. During this step, AIR and the Department's staff review proofs from the print vendor, verifying that the file to be printed matches the previously approved blackline proof. At AIR, in addition to reviews by test development and forms production staff, two members of the technical team—who have not seen the items previously—independently take the tests. This process forces a close look at the items and gives a final opportunity to verify the keys.

During the production and review process, test book blacklines are accompanied by answer document blacklines, which are produced by our partner, DRC. Answer documents reflect the demographic fields required by the Department, as well as fields for pre-code labels and the scannable marks required for accurate data collection. The item sequence is based on test maps and corresponds directly with test books.

All blacklines in AIR's production queue are controlled by an electronic version-control server system that ensures that only the cur-

rent version is immediately available to our production staff, preventing version-control errors. Like AIR's ITS, which controls and tracks all changes to items, this production system maintains historical records (including all older versions), which senior production staff can access if necessary.

Each blackline after blackline 1 and the blueline (camera-ready copy) is automatically compared with the immediately preceding version using a PDF comparison tool that highlights all changes. This step has proved useful for identifying unintended changes made during the revision process. Such changes are difficult to detect because they can appear anywhere in a document and may be subtle. The PDF comparison tool highlights these changes so differences between versions can be mapped to an intended revision. All materials delivered will go through this process, ensuring that the Department will receive error-free materials for review and that any changes requested by the Department are implemented promptly and accurately.

At each of the review stages, proofs will be accompanied by proof tickets that identify the document being reviewed, its review stage, the scheduled and actual delivery dates, and the return date. Sign-off by the Department will be required at each stage before proceeding with subsequent steps.

Final source files will be made available to the Department in electronic form no later than 30 days after the close of the test window.

Scannable Documents

Image-scannable test booklets or answer documents will be developed in house by our partner, DRC, using DRC's publishing system. DRC's Document/Graphic Design Group routinely provides exemplary services to state testing clients, including the design, layout, and production of scannable answer documents and other testing materials as well as the receipt, production, and transfer of electronic print files. They develop effective new materials and convert existing documents to meet changing assessment requirements. DRC uses the latest design and publishing software and works with multiple file formats and plat forms so that data file conversion is hassle free. DRC staff members are committed to developing accurate and engaging test materials that meet all quality requirements.

AIR and DRC propose that scannable test booklets be provided for grades 3 and 4, and separate test book lets and answer documents be provided for grade 5. After AIR has finalized the test booklets, DRC will develop and produce customized, scannable answer documents in collaboration with AIR and the Department. Answer documents will be color coded to match test booklet and manual colors, as appropriate. DRC's custom-designed answer documents will feature a light background grid and light background lines on the response area for constructed-response items, as well as directions to help students easily navigate between the test booklet and the answer document.

The Department's scannable answer documents will be designed and printed to fully support test administration, scanning, and scoring processes. All key departments involved in the scanning and scoring process will have the opportunity to review and approve laser proofs and printer proofs. Requirements and printed documents will be subjected to strict quality assurance inspections to ensure accuracy. The format and precision of the printed information, including precode information, will be closely examined by software quality assurance analysts to make certain the information is correct. DRC will provide AIR and the Department with produc-

tion samples of answer documents for an independent quality review.

Production of Online Forms

Preparing online tests for delivery follows a somewhat different path than preparing a paper test. These differences allow a workflow that moves an enormous amount of work off the critical path, allowing analogs of blackline reviews to take place even before the forms are constructed. For example, cover art, layouts, and other styling are determined in advance and can be viewed in the Item Tracking System (ITS) and the test delivery system well in advance of form construction.

Online items can be reliably reviewed as they will appear to the student well before the forms are constructed. AIR's Item Tracking System incorporates the same rendering engines that will ultimately render items to students. Our web preview review actually locks the item down, ensuring that students will see the item exactly as the reviewer did.

Another critical difference is that students interact with items in more diverse ways in an online test. For examples, items may include tools, accommodations, session rules, and other features that are established well in advance and configured as part of the test delivery system, rather than as part of a particular form.

As these examples indicate, the preparation of the screen-ready forms begins well before any forms are constructed. Items and item groups can be reviewed as they will appear to the examinees on the test. AIR's ITS integrates the same rendering engines included in our test delivery system, ensuring that items (or item groups) appear to reviewers as they will appear to the students.

Operationally, the ability to review items as they appear before they are assembled onto forms provides a huge advantage. First, the Department's reviewers will have more time to review the items and can spread the review work out over a longer period. In a typical paper assessment, blackline reviews come near the end of the process and compress the work schedules of reviewers. Using AIR systems, the online equivalent of blackline reviews can be conducted on a rolling basis, with each "page" being complete and laid out as soon as the items to appear on that page are finished.

Once the final bookmaps are approved and accepted, they are published to our test site, where they undergo *platform review*, which looks at each form on many of the supported computer platforms. Platform reviews ensure appropriate display of each item on each platform.

We publish completed forms to the user acceptance test site. This instance of the test delivery system is configured to the Department's specifications.

Unlike the process for paper tests, which require more lead time to adjust, during the user acceptance period AIR staff responds to the Department comments nightly. In most cases, the Department's comments are addressed within 24 hours.

The online form development process allows much of the review work to be done on a flowing basis as items are approved for inclusion on the test. The integration of the item rendering engine with our ITS allows reviewers to lock down the specific rendering of an item long before that form is developed. Contrast this with the paper-and-pencil process, in which the layout and format can only be reviewed during the blackline process, which is necessarily subject to tight deadlines. By moving some elements of review off the critical path, we reduce the likelihood of errors as well as removing the stress that comes from doing critical work on tight deadlines.

7.3.7.5 Interpretive Products

Our experience assisting state Departments of Education in transitioning to new standards, new assessments, and online tests has taught us that clear, detailed, interpretive products are critical to building stakeholder success for any new assessment system. Understanding how new item types assess the new standards and how they are scored is essential if teachers are to provide effective classroom instruction. Similarly, both parents and educators need to understand how to interpret their student's test results so they can identify strengths and weaknesses early on. AIR will provide a full suite of interpretive products to ensure that Florida parents, students, and educators understand the new standards, assessments, and test results including the following:

- An Interpretive Guide for Florida's Paper Score Reports;
- A User Guide to help Florida Educators, Schools, and Districts understand Florida's Online Reports;
- Sample test materials including paper practice tests, practice answer sheets, and answer keys, including separate Braille, Large Print, and translated practice test materials for students who require accommodations or non-English materials;
- Computer-based practice tests that use the same test delivery engine as the operational tests;
- Scoring Guides for the English Language Arts/Literacy (ELA/L) and Mathematics Assessments as well as the End-of-Course (EOC) assessments that include all items types on the assessments and explain the alignment to Florida's standards as well as the Common Core State Standards;
- Test Specifications that provide detailed requirements for writing passages, prompts, and items.

AIR will produce ADA-compliant documents as specified in the ITN. In the following sections we describe a detailed plan for providing each interpretive product.

Understanding Florida's Assessment Reports

As Florida adopts new standards and continues to move its assessment program online, it is critical for parents, educators, schools, and districts to understand how to interpret score information from the new assessments. To ensure that stakeholders learn how to use new score reports and score data, AIR will produce an Interpretive Guide for parents and students explaining the paper reports that they receive for the EOC and ELA/L and Mathematics Assessments. Should the Department decide to continue providing schools and districts with PDFs posted in the Online Management System, AIR will also include information about the PDF school and district reports and explanations of each element in this publication. However, should the Department choose to use AIR's online reporting system to deliver score data to schools, districts, and educators, we propose that the Interpretive Guide publication focus solely on the paper reports delivered to parents and students. The User Guide discussed below will provide information to educators, schools, and districts on how to access and interpret reports and data in the Online Reporting System. (For sample Interpretive Guides and User Guides, please see Appendix F.)

In the next two sections we describe the proposed content for both the Interpretive Guide and the User Guide in more detail.

Interpretive Guide for Florida's Paper Assessment Reports

We propose to include the following content in this publication and will work with the

Department to obtain approval on detailed outlines before developing the guide:

- Full color screenshots of the EOC, ELA/L, and Mathematics score reports to students and families along with explanatory text
- Plain language explanations about the content areas and strands tested
- An explanation of how to interpret scores and Standard Error of Measurement
- A glossary of terms
- Detailed explanations of how released performance tasks are scored, including the released item, alignment to the standards, and annotated student responses explaining why the response was awarded the points received
- Links to more in-depth training materials described in Section 7.4.7.1

The guide will include an overview of the ELA/L and Mathematics tests and the EOC Tests will provide a brief description of the assessment, the purpose it serves in improving Florida's education system, a Frequently Asked Questions section that will provide basic information about why students are taking the assessment, what happens if they do not score at proficient level, and who develops the assessment.

A section presenting the Performance Level Descriptors will provide an explanation of the expectations of students for each subject and performance level. This section will allow parents and educators to know what is required for a student to perform at a particular proficiency level and will also provide plain-language explanations that include specific examples of what typical students can do at each level.

The guide will include background information about the scoring process for both the ELA/L and Mathematics and EOC assessments. This section will define the terms used in the ELA/L and Mathematics and EOC assessment student reports, such as scale score and subscale score. The guide may include a description of the relationship between raw cut-scores, which represent a student's overall score in a subject area, and sub-scores, which indicate a student's strengths and weaknesses in that subject's content standards. We propose that this section also include a list and definitions of all possible non-scorable codes that may appear on a student report.

We propose to include screenshots of each page of the printed parent report and provide detailed explanations of each element. For example, using non-technical language, we can explain the information presented in graphic displays, describe how to interpret a student's strengths and weaknesses using a sample report, and provide a glossary of jargon-free definitions of any technical terms that may be included in the reports (e.g.,, "constructed-response question" and "score levels" in the family guide). Should the Department choose to include Next Steps text in the parent reports, this section may also contain an explanation of how parents can use the customized recommendations to help their child improve his or her understanding of the standards. This section might also contain a detailed explanation of how to use the longitudinal data charts to compare student performance from year to year.

Proposed Content for the Online Reporting System User Guide

As Florida adopts new standards and continues to move its assessment program online, educators need to become adept at locating score information quickly and intuitively from multiple assessments. Should the Department decide to use AIR's online reporting system as described in Section 7.5.5, it will be critical for educators to learn how to access and interpret data from AIR's interactive online reporting

system. In addition to absorbing volumes of online score data, educators must also be able to understand and take appropriate actions based on these data. AIR's User Guide for the Online Reporting System is designed to provide a conceptual framework that helps users quickly locate the right level of data, interpret its impact, and identify the concrete actions they can take to help students improve.

Over the past five years, we have produced concise, effective User Guides for the Online Reporting System explaining to novice and experienced users alike how to access reports, create custom rosters, investigate trends in the data, and generate PDF reports in the Online Reporting System. The Online Reporting System User Guides are available in electronic format as well as PDFs as required. We will work closely with the Department staff to produce the User Guide that includes step-by-step instructions on how to use the Online Reporting System and the following proposed content:

- Color screenshots of different reports and data views describing key functions
- Step-by-step instructions for users on how to access specific reports and data
- Overview of the Online Reporting System (searching for students in the Online Reporting System, New Features)
- Instructions on how to navigate within the Online Reporting System
- Information on User Roles (who has access to what data in the Online Reporting System)
- Explanations of Score Report Layouts and Features (Demographic Filters, Comparisons, Downloadable Data files, Legends)
- List and explanations of Subject Detail Reports
- List and explanations of Reporting Categories
- List and explanations of Trend Reports
- Explanation of how to create and manage Custom Roster Reports
- Explanation of how to print reports and export data to Excel
- Explanation of available Test Management Reports and how to use them

The User Guide for the Online Reporting System begins with an overview of the system, screen shots, and descriptions of the user experience while moving through the system. Next, the guide walks users through scenarios demonstrating appropriate uses of the data. In introducing each set of reporting capabilities, the guide will describe why those reports are available, how they can help at the school or in the classroom, and what the limitations of the data are. The guide also shows users how to create class and other rosters of students and how to use these rosters to create aggregate statistics or track groups of students over time. Step-by-step instructions are provided to users to view district, institution, teacher, and individual student reports in table and graph format; access and use longitudinal reports for their diagnostic need; filter score reports by student subgroup (i.e., gender, ethnicity, ELL); and manage online rosters (groups.)

The User Guide also includes detailed instructions on how authorized users can use Test Management Reports to monitor student testing status for their school or districts and to identify students who have and have not tested. Users also learn how to use these reports to help schedule test activities for their school.

Production of Interpretive Guide and Online Reporting System User Guide

AIR will adhere to Florida's production and review guidelines as outlined in Section 7.3.10 when developing the Interpretive Guide and the Online Reporting System User Guide. Upon approval of final drafts, AIR will post the Interpretive Guide and User Guide on the Portal for districts and schools to download.

In producing the User Guide for the Online Reporting System, AIR will rely on its dedicated team of technical writers, editors, and graphic designers who are continually involved in developing, editing, and enhancing documentation for AIR's Online Reporting System. The goal of the Online Reporting System User Guide is to motivate teachers and administrators to make the best possible use of the system and the data it provides. AIR will work closely with the Department to update and revise the user guide for each school year and ensure all systems documentation reflects updates to the system.

AIR's process for developing user guides and systems documentations is divided into two phases:

- A drafting phase, during which we obtain agreement on the content and design of the document.
- A production phase, during which we produce the document to the specifications developed in the first phase, accommodate any final adjustments, and ensure that the camera-ready proofs are error free.

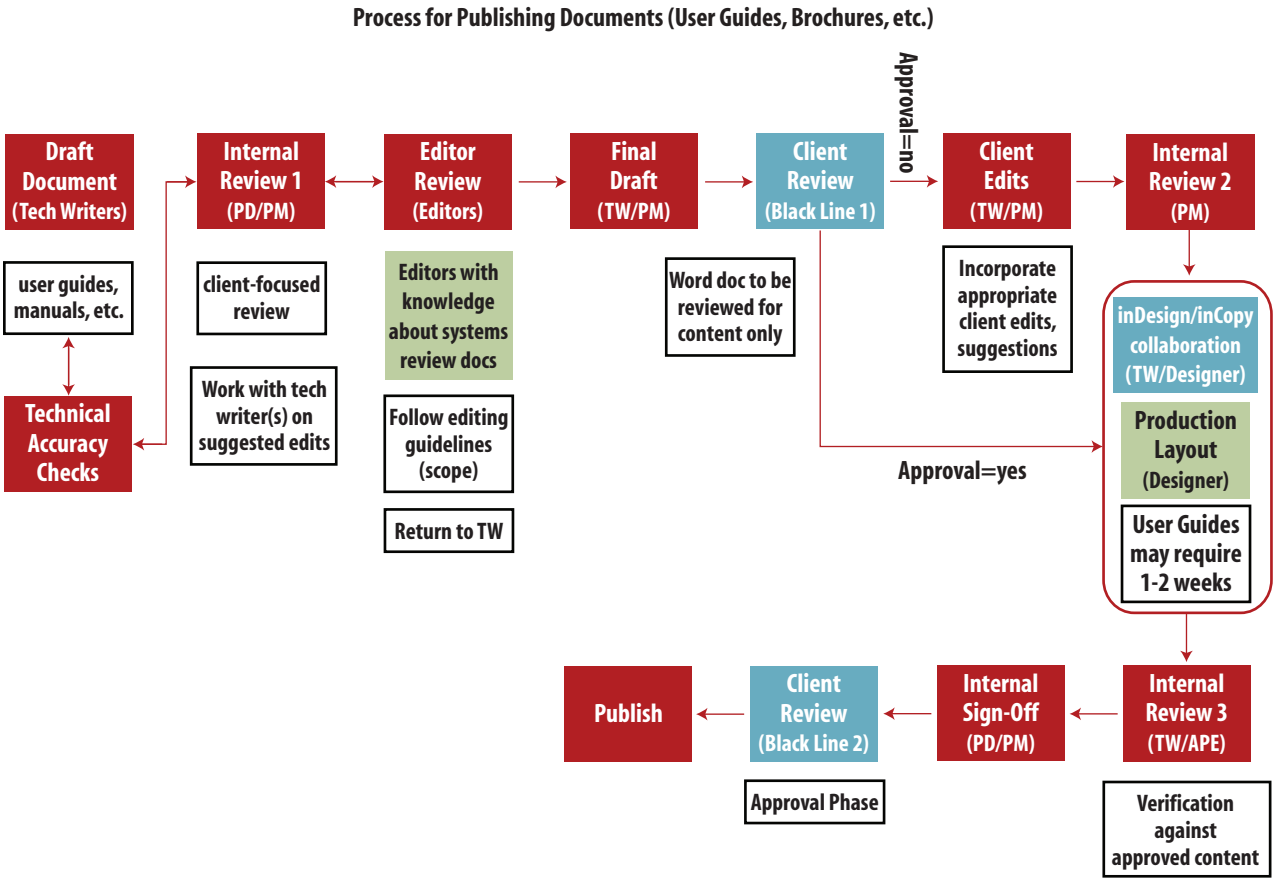
The drafting process begins with discussions with the Department, during which we discuss issues of both design and content. Once drafts are approved, we proceed to production. The first blackline version of the document, which results from the first iteration through our production process, is designed to reflect the final layout and formatting. Typically, only format and layout changes are made at blackline. A second blackline is produced after incorporating these changes to confirm that they were made correctly.

Our production processes include multiple editorial reviews, and each document must receive senior staff sign-off. Exhibit 7.3.7.5-1 provides an overview of our editorial review process. Each document's content is fully drafted before the document enters the production system. Camera-ready drafts are called blackline proofs, and we typically produce up to three of these, with final edits made on blackline 1, any missed changes corrected on blackline 2, and a clean version delivered at blackline 3.The final blackline proof must have no changes, and it serves as the master document against which the blueline proof is evaluated.

Sample Test Materials

Until stakeholders can take a practice test, see released test questions, and learn how new item types are scored, many questions about the new testing program will remain and confidence in the new program will likely remain low. For this reason it is essential that educators, students, and parents, be able to engage with the new assessments and standards using sample test materials in paper and online formats early on. Our proposed strategy for providing paper-based and online practice tests recognizes that online and paper tests are different and makes the best use of technology for students taking the test online. Specifically, we propose to develop paper-based sample test materials using common items with the online tests where those items work. For example, we have found that in many cases, online items can easily be offered on paper. In those cases where an online machine-scored constructed-response item is not well-suited to a paper format, we propose to replace the item with a

Exhibit 7.3.7.5-1: Overview of Our Editorial Review and Revision Process



human-scored constructed-response item for the paper-based practice test (see below for a more detailed discussion). We propose to provide the following sample test materials:

- Paper and online practice tests for each grade and subject of the ELA/L and Mathematics Assessments, the EOC Assessments, and the Writing Assessment;
- Practice Answer Sheets for each assessment;
- Teacher scoring guides for each practice test (see section on Scoring Guides);
- Large Print and Braille versions of the paper practice test materials along with scoring guides;
- Translated practice tests and answer sheets in Spanish and Haitian Creole.

Our plan for providing each of these materials is described in more detail in the following sections.

Plan for Producing Paper Practice Tests

AIR proposes to deliver practice tests consisting of at least 10–20 released items that mirror the operational test form. Items will reflect a range of standards and skills in order to represent a small-scale version of the actual test. Computer-based practice tests will provide students with AIR's full suite of online response mechanisms, thereby giving students a chance to experiment with the tools and achieve a level of comfort and proficiency before the testing window opens. Paper-based practice tests, including Large Print and Braille accommodated versions, will offer an equivalent preview of testing material so that all students have an opportunity to become acclimated to

the tests they will take. Both regular print and ADA-compliant versions of the sample test materials will be made available each fall to ensure that students and educators have ample time to review them.

AIR will provide separate sample test materials for both paper-based and computer-based tests as we understand that these have some inherent differences. While computer-based practice tests will include samples of machine-scored constructed-response items, these items are not always translatable to a paper environment. AIR develops machine-scored items with the intent to measure skills that are simply not practical or possible to assess otherwise. For example, our simulation tool allows students to perform a variety of tasks to identify kinds of rocks, or use a microscope to differentiate cells by their properties. These authentic, real-word applications are often too complex to measure on a paper test, but AIR's machine-scored item types overcome such limitations and make them possible to assess in an online environment. This raises issues for the development of equivalent paper-based practice items. Since some items cannot be rendered effectively on paper, AIR proposes a practice test system that makes the best use of technology for students taking the test online, while maintaining as much equivalency as possible for those who require the paper-based practice test. We will provide common items on the paper practice test when those items work, and we will replace complex machine-scored constructed-response items with human-scored constructed-response items when necessary.

AIR will also ensure that items on the paper practice tests can be made available in Braille. Considerations for such items may include

- avoiding photographs;
- ensuring that graphics or drawings can be transcribed;
- finding appropriate solutions for standard charts, such as a periodic table of the elements;
- ensuring that items do not rely on a visual experience (e.g., a question that involves the concept of depth perception); and
- avoiding or adapting items that require spatial instructions.

In addition to paper practice tests, we will also provide a separate answer key booklet for each practice test (both paper and online). Answer booklets will provide teachers with the information they need to understand and explain the items in the sample test materials. Answer key booklets will contain the full text of the item from the sample test, along with the following:

- The item's alignment to the standards.
- The correct answer for the item.
- A rationale for each multiple choice response. (We note that Florida's current answer key booklets contain rationales for the correct response only.)
- A screenshot of the correct response for machine-scored constructed-response items.
- A complete rubric for each constructed response with descriptions at each score point.

Exhibit 7.3.7.5-2 illustrates that AIR provides rationales for each response. We offer an explanation of the correct response as well instructive material teachers can use to explain why the distractor options are plausible but incorrect.

In Exhibit 7.3.7.5-3 we show a constructed-response item. The rubric displays the range of possible answers and an explanation of each score point. We note that this item can be used in both online and paper tests. In the

Exhibit 7.3.7.5-2: Sample Test Answer Key

Grade 10 Reading Training Test Answer Key

** Question 12

Hawai'i Content and Performance Standard, 3rd edition (HCPS III)
Standard: Literary Response and Analysis
Benchmark: LA.10.3.3 Explain how genre conventions and literary devices support an author's message and purpose

Common Core State Standard (CCSS)
Domain: Key Ideas and Details
Cluster: N/A
RI.9-10.3: Analyze how complex characters (e.g., those with multiple or conflicting motivations) develop over the course of a text, interact with other characters, and advance the plot or develop the theme.

Answer Key: C

In this story, the mother's words are used to

A. remind the family to speak to one another.

This answer is not correct. Although parents sometimes encourage their families to communicate, this is not the case in this story.

B. make the father feel guilty for his actions.

This answer is not correct. Although the father might feel guilty because of what the mother said, there is no indication that was her intention or that he does feel guilty.

C. remind the family of the importance of the tree.

This answer is correct. The mother talks about the history of the tree to remind the family of how important the tree is.

D. help the children forget the past.

This answer is not correct. The mother recounts the history of the tree in order to remind the family of the importance of the tree, not to help others forget past events.

online version, students type their response into the text box. Test developers use the propositional rubric tool to create a rubric that matches the human-readable rubric below.

Scoring Guides

Not only do Florida's scoring guides provide educators with information about the scoring of constructed-response items, but they also provide important information about the test itself. Beginning with an explanation of the test design, a summary of the standards and benchmarks assessed, and a description of the item types, scoring guides provide the context for educators to understand the assessment as a whole. AIR proposes to deliver scoring guides that provide this critical information as well as the details of scoring. Scoring guides will address each released constructed-response item included on the student reports.

For each item in the scoring guide, AIR will display the prompt as it appeared to students on the test. We will provide the complete scoring rubric and samples of student responses at each score point, not just the top scores. In addition, we will create detailed annotations of each student response to clarify for educators the distinctions scorers used to differentiate each level of student performance.

Exhibit 7.3.7.5-3: Sample Constructed Response Rubric

Grade 10 Reading Training Test Answer Key

** Question 14

Hawai'i Content and Performance Standard, 3rd edition (HCPS III)
Standard: Literary Response and Analysis
Benchmark: LA.10.3.3 Explain how genre conventions and literary devices support an author's message and purpose

Common Core State Standard (CCSS)
Domain: Craft and Structure
Cluster: N/A
9-10.4: Determine the meaning of words and phrases as they are used in the text, including figurative and connotative meanings; analyze the cumulative impact of specific word choices on meaning and tone (e.g., how the language evokes a sense of time and place; how it sets a formal or informal tone).

The tree in this passage is important to the family. Name two ideas that the tree symbolizes to the family.

Type your answer in the space provided.

Answer Key:

Correct ideas:
- memories/childhood
- togetherness
- survival/endurance
- family

2 points
The answer names two correct ideas that the tree symbolizes to the family.

1 point
The answer names one correct idea that the tree symbolizes to the family.

0 points
The answer names none of the correct ideas that the tree symbolizes to the family. It is inappropriate, irrelevant, or blank.

The scoring guides for extended-response items and performance tasks can be particularly challenging as these items assess more complex skills. Through our work with statewide assessment programs and the Smarter Balanced Assessment Consortium, AIR staff have developed experience in creating and scoring these more complex items. We will collaborate closely with the Department to create a format for scoring guides that provides the level of detail Florida's educators need to understand the scoring of such open-ended tasks. These guides may provide general information about how released prompts are scored, an explanation of the rubric, images of student responses, and annotations at each score point.

Exhibit 7.3.7.5-4 is an extended-response item included in an English Language Arts performance task. This item is the culmination of the task in which students have interacted with, and responded to, a variety of stimuli around a central theme. Here, students are asked to incorporate many elements of the task into their final writing product. This example is taken from the Smarter Balanced practice test, and the scoring guide reflects the Smarter Balanced scoring guide.

Exhibit 7.3.7.5-4: Sample Extended-Response Item

Student Directions for Part 2

You will now review your sources, take notes, and plan, draft, revise, and edit your letter. You may use your notes and refer to the sources. Now read your assignment and the information about how your argumentative letter will be scored; then begin your work.

Your assignment:
Your local city council is voting on whether to use city funds to pay for a sculpture to be created and placed in the town center. Today you will write a multi-paragraph argumentative letter that will be presented to the city council that argues either in support of or in opposition to the city government-funded sculpture. Make sure to address potential counterarguments in your letter and support your view with information from the sources you have examined.

Argumentative Scoring
Your letter will be scored using the following:

1. **Statement of claim and organization:** How well did you state your claim, address opposing claims, and maintain your claim with a logical progression of ideas from beginning to end? How well did your ideas thoughtfully flow from beginning to end using effective transitions? How effective was your introduction and your conclusion?
2. **Elaboration/evidence:** How well did you integrate relevant and specific information from the sources? How well did you elaborate your ideas? How well did you clearly state ideas using precise language that is appropriate for your audience and purpose?
3. **Conventions:** How well did you follow the rules of grammar usage, punctuation, capitalization, and spelling?

Now begin work on your argumentative letter. Manage your time carefully so that you can

1. plan your multi-paragraph letter
2. write your multi-paragraph letter
3. revise and edit the final draft of your multi-paragraph letter

Word-processing tools and spell check are available to you.

For Part 2, you are being asked to write a multi-paragraph letter, so please be as thorough as possible. Type your response in the space provided. The box will expand as you type. Remember to check your notes and your prewriting/planning as you write and then revise and edit your letter.

This item is scored on a 10-point rubric—4 points for purpose/organization, 4 points for evidence/elaboration, and 2 points for conventions. AIR will work closely with the Department to ensure educators and stakeholders understand how these items are scored and have the information they need to use in the classroom and inform writing instruction.

Plan for Providing Computer-based Practice Tests

AIR will provide a practice test prior to the opening of operational or field tests. The ITN requires such a publicly released test prior to each live test. AIR practice tests

- are delivered using the same system as the operational test, so that the student experience is the same in every way;
- include every item type that students will encounter on an operational test;
- can be accessed using an ordinary browser (rather than our secure browser), though some functionality requires the secure browser; and
- can be accessed anonymously for independent practice, or in proctored sessions, which enables Test Administrators to practice their duties.

The practice tests may be separate subject tests within each grade or combined subjects, at the discretion of the Department. For pricing purposes, we assume a total of 20 items per grade on the practice test. We note that both SAGE and Smarter Balanced have publicly available practice tests, which we invite readers to review at https://utpt.tds.uat.airast.org/student and https://sbacpt.tds.airast.org/student/.

Practice Test Site

Every item type that students will see on the operational test will be available on the practice site. For example, we will make available samples of our graphic-response constructed-response items, including a self-guided interactive tutorial. As new constructed-response item types become available, tutorials and practice materials will likewise be deployed to the practice and training sites.

Only non-secure material will be available on these sites, including items that the Department has decided to release. In addition, all materials used on the site will have appropriate permissions from their copyright holders.
